Progress report

2. The activities carried out in the context of the institutional strengthening (IS) project for Benin in the period of 2011 and 2012 were satisfactory. The main objective for this period was to achieve and sustain total phase of majors ODS including CFCs by 1st January 2010, to prepare the HCFC phase-out management plan (HPMP) project document and start its implementation. The National Ozone Unite (NOU) updated the regulatory system to control HCFCs. Refrigeration technicians were trained on good practices in servicing and safe handling of hydrocarbons, the capacity building of customs officers to control and identify HCFCs and HCFCs based equipment were strengthened. Different awareness materials like brochures, video were developed and distributed. The duration of the phase V has been extended because of the slow implementation of the investment component of the terminal phase-out management plan (TPMP).

Plan of action

3. The main focus is on the HPMP implementation through the continuation of the training activities for refrigeration technicians on good practices and safe handling of hydrocarbons as well as strengthening the capacity building of customs officers of the control and identification of HCFCs and HCFCs based equipment.

Plan of action

9. The main objective of the IS for the next two year (2014 to 2015) is to focus on the HPMP implementation by working closely with customs to strengthen the border control as well as providing capacity building to refrigeration technicians on good practices in refrigeration and safe handling of hydrocarbons and the use of low global warming potential (GWP) alternatives for HCFCs. The main activities will be: to ensure sustainability of NOU activities; To continue information dissemination and awareness raising towards the decision-makers, other national stakeholders and the general public; to coordinate the implementation of HPMP activities; to facilitate enforcement of regulatory measures to prevent imports and use of HCFCs as per the national regulations; to collect and report data to Ozone Secretariat and report country programme (CP) progress to the Multilateral Fund Secretariat,

Progress report

14. Phase III of the IS project for Cape Verde has been implemented successfully and achieved all its expected goals. The Country updated the regulatory system to control HCFCs. The implementation of the first tranche of HPMP has been completed and the country is requesting a second tranche. Cape Verde has developed very useful and innovative awareness materials which have benefitted other Portuguese-speaking countries and these were distributed in different islands. The phase III was extended up to September 2013 because of the slow implementation of the TPMP and HPMP activities.

Plan of action

15. The NOU will continue working to ensure the compliance with the HCFC quota and will ensure the implementation of the approved HPMP second tranche activities. The public awareness related to the protection of the ozone layer and climate change will be continued. The detailed objectives as defined in the action plan are: enforce the regulation and the legal system to monitor and control ODS import and uses; increase public awareness in the country in general and specially in other islands where the ODSs importers operate; continue the training of refrigeration technicians and customs officers and inform all stakeholders about new low GWP alternatives to HCFCs.

Progress report

26. During the period of the phase I to VII of the IS project in Gabon, the implementation was going on satisfactorily. The NOU of Gabon has been fully operational. TPMP activities were successfully implemented and HPMP activities started with delay because of change of the Coordinator of the NOU. Awareness activities are also being carried on and traders are encouraged to import equipment containing alternative refrigerants and to use recovered/recycled HCFCs as much as possible. With the support provided through the IS project, the NOU of Gabon was able to collect 2010, 2011 and 2012 data on ODS consumption and reported Article 7 data to Ozone Secretariat. Progress reports on CP implementation were also sent timely to the Fund Secretariat.

Plan of action

27. During the next phase of the IS project, the NOU Gabon will be coordinating the implementation of all phase-out activities of the HPMP. The Government of Gabon intends to provide more training to the refrigeration technicians and customs officers and undertake more awareness activities towards the public and other stakeholders. The funding of the IS project will allow to country to maintain full time NOU staff which will be able to meet all reporting requirement to UNEP and UNIDO as implementing agencies as well as progress report to the Fund Secretariat and Article 7 data to the Ozone Secretariat.

Progress report

29. Myanmar acceded to the Montreal and Beijing Amendments in 2012, and complied with its reporting obligations in the past two years. The NOU also coordinated the development, approval of the HPMP, and followed up closely on the review and approval of the Ozone Order, which would pave new bases for the implementation of the ODS import/export licensing and quota system. The NOU also actively participated in the network meeting, as well as OEWG and MOP in the past two years.

Plan of action

30. With the expected approval and enforcement of the Order on the Operation of Business Relating to Ozone Depleting Substances by 2013, the HPMP will be implemented in Myanmar. The NOU is planning to strengthen the capacity of the customs officers for the enforcement of the licensing and quota system on ODS import/export control, and to more effectively engage the national stakeholders for the implementation of the other HPMP activities to ensure Myanmar would be staying in compliance with the Montreal Protocol.

Plan of action

39. During the next the next two years (2014 to 2015), the NOU will focus its efforts to sustain compliance with the total CFC phase out and to ensure freeze in HCFCs is maintained and reduced by 10 per cent by 2015, as required by the Montreal Protocol. The NOU will continue the training programme for technicians in the refrigeration sector and customs officers in reference to HCFC phase-out. The NOU will also continue its outreach programme by the media, NGOs and distribution of outreach materials on low GWP alternatives in newspapers, brochures, and pamphlets to industry and other stakeholders.
