COMITE EXÉCUTIF  
DU FONDS MULTILATÉRAL AUX FINS  
D'APPLICATION DU PROTOCOLE DE MONTRÉAL  
Soixante-dix-neuvième réunion  
Bangkok, 3 – 7 juillet 2017

**RAPPORT PÉRIODIQUE DU PNUD AU 31 DÉCEMBRE 2016**

1. Le présent document renferme le rapport périodique du PNUD au 31 décembre 2016<sup>1</sup>
2. Il renferme un sommaire des progrès accomplis sur le plan de la mise en œuvre des projets en 2016 et des progrès cumulatifs depuis 1991. Il contient aussi un examen de l'état de mise en œuvre de chaque projet en cours<sup>2</sup> au niveau des pays, avec l'indication des projets présentant un retard dans la mise en œuvre, des répercussions potentielles sur l'élimination des substances réglementées, et des projets comportant des questions en suspens que doit examiner le Comité exécutif. L'annexe 1 du présent document établit, pour chaque projet en cours comportant des questions en suspens, un état d'avancement et une recommandation à l'intention du Comité exécutif. Le document inclut par ailleurs une recommandation.

**Sommaire de l'état d'avancement des projets pour 2016 et cumulativement depuis 1991**

3. La mise en œuvre des projets et activités menés par le PNUD en 2016 et cumulativement depuis 1991 jusqu'au 31 décembre 2016 se résume comme suit :

- a) **Élimination** : en 2016, zéro tonne PAO de HCFC a été éliminée de la consommation et 365,1 tonnes PAO de HCFC ont été approuvées à des fins d'élimination. Depuis 1991, 66 440 tonnes PAO de SAO ont été éliminées de la consommation, sur un total prévu de 67 437 tonnes PAO pour les projets approuvés (excluant les projets annulés et transférés);

<sup>1</sup> Le rapport périodique est joint au présent document. Les données ont été intégrées dans la base de données Rapport périodique consolidé disponible sur demande.

<sup>2</sup> Les projets en cours sont tous les projets qui ont été approuvés et qui étaient en cours d'exécution le 31 décembre 2016. Les principaux indicateurs de progrès sont les suivants : pourcentage de fonds décaissés et pourcentage de projet ayant commencé à décaisser des fonds; financement devant être décaissé d'ici la fin de l'année en pourcentage du financement approuvé; temps moyen des retards prévus dans la mise en œuvre; et renseignements consignés à la colonne Remarques dans la base de données sur les rapports périodiques.

- b) **Décaissements/approbations :** en 2016, sur la base du rapport périodique de 2015, 28,29 millions \$US ont été décaissés et 27,71 millions \$US ont été prévus pour décaissement, soit un taux de décaissement de 102 pour cent du montant prévu. Cumulativement, 673,83 millions \$US ont été décaissés sur le total de 752,02 millions \$US approuvé pour décaissement (excluant les coûts d'agence), soit un taux de décaissement de 90 pour cent. En 2016, 42,88 millions \$US ont été approuvés aux fins de mise en œuvre;
- c) **Cout-efficacité (en PAO) :** depuis 1991, le rapport coût-efficacité moyen des projets d'investissement approuvés entraînant une réduction permanente de la consommation est de 9,76 \$US/kg. Le rapport coût-efficacité moyen des projets d'investissement par tonne PAO est de 8,22 \$US/kg pour les projets achevés et de 73,53 \$US/kg pour les projets en cours<sup>3</sup>;
- d) **Nombre de projets achevés :** en 2016, 25 projets ont été achevés. Depuis 1991, 2 147 projets sur les 2 350 projets approuvés (excluant les projets clos ou transférés) ont été achevés, soit un taux d'achèvement de 91 pour cent;
- e) **Vitesse d'exécution - projets d'investissement :** les projets achevés en 2016 ont été terminés en moyenne 30 mois après leur approbation. Depuis 1991, la durée moyenne d'exécution des projets d'investissement a été de 33 mois après leur approbation. Les premiers décaissements ont commencé en moyenne 13 mois après leur approbation;
- f) **Vitesse d'exécution - projets autres que les projets d'investissement :** les projets achevés en 2016 ont été terminés en moyenne 39 mois après leur approbation. Depuis 1991, la durée moyenne d'exécution des projets autres que les projets d'investissement a été de 40 mois après leur approbation. Les premiers décaissements ont commencé en moyenne 13 mois après leur approbation;
- g) **Préparation de projet :** sur les 519 activités de préparation de projet approuvées à la fin de 2016, 483 ont été achevées. En 2016, neuf projets ont été achevés, laissant ainsi 36 projets en cours;
- h) **Retards dans la mise en œuvre :** en tout, 85 projets d'investissement étaient en cours à la fin de 2016. Ces projets seront achevés en moyenne trois mois avant la date d'achèvement prévue. Il n'y avait toutefois qu'un seul projet classé comme « projet ayant un retard dans la mise en œuvre » assujetti aux procédures d'annulation (puisque les accords pluriannuels (APA) ne sont pas soumis à de telles procédures);
- i) **Accords pluriannuels :** en 2016, le PNUD assurait la mise en œuvre d'un accord pluriannuel pour l'élimination du CTC, d'un accord pluriannuel pour la production accélérée de CFC et 56 accords pluriannuels pour les plans de gestion de l'élimination des HCFC (PGEH). Depuis 1991, 126 accords pluriannuels ont été approuvés, dont 68 sont maintenant terminés.

4. L'analyse du rapport périodique du PNUD figure à l'annexe II du présent document.

---

<sup>3</sup> La valeur plus élevée pour les projets en cours est en grande partie attribuable aux valeurs PAO plus faibles des HCFC, mais également aux méthodes employées par les agences pour ventiler l'élimination.

## **État d'avancement des projets en 2016**

5. Le Secrétariat a examiné l'état d'avancement de la mise en œuvre des projets pays par pays, en tenant compte du retard enregistré en 2016 par rapport aux dates d'achèvement prévues, des incidences potentielles de ces retards sur l'élimination et du taux de décaissement prévu.

6. Sur les 134 projets en cours, à l'exception des activités de renforcement des institutions et de préparation de projet, 37 projets ont reporté leur date prévue d'achèvement depuis le rapport périodique de 2015. Le Comité exécutif pourrait souhaiter prendre note que le PNUD présentera à la 80<sup>e</sup> réunion un rapport sur un projet présentant un retard dans la mise en œuvre<sup>4</sup>, qui avait aussi été classé comme ayant un retard dans la mise en œuvre en 2015 (annexe I du présent document).

7. Au cours de l'examen du rapport périodique, le Secrétariat a eu plusieurs discussions avec le PNUD, au cours desquelles un certain nombre de points concernant les projets en cours ont été élucidés. Toutefois, d'autres questions n'ont pu être résolues en rapport avec des projets d'accords pluriannuels pour l'élimination des CFC et des HCFC; des projets concernant l'élimination des déchets de SAO; des plans de gestion des frigorigènes; la préparation d'enquêtes sur les substances de remplacement des SAO; et le renouvellement des projets de renforcement des institutions, comme on peut le voir à l'annexe I du présent document. Pour chaque projet en cours, on présente une brève description de l'état d'avancement et des points en suspens et on propose une recommandation à l'attention du Comité exécutif.

## **Recommandations**

8. Le Comité exécutif pourrait souhaiter :

- a) Prendre note :
  - i) Du rapport périodique du PNUD au 31 décembre 2016 figurant dans le document UNEP/OzL.Pro/ExCom/79/10;
  - ii) du fait que le PNUD fera rapport à la 80<sup>e</sup> réunion sur un projet présentant un retard dans la mise en œuvre et sur 21 projets recommandés pour d'autres rapports de situation, comme on peut le voir à l'annexe I du présent document;
- b) Approuver les recommandations relatives aux projets en cours comportant des questions spécifiques, énoncées à la dernière colonne du tableau de l'annexe I du présent document.

---

<sup>4</sup> Le Comité exécutif a défini les projets comportant un retard dans la mise en œuvre comme des projets approuvés pendant 18 mois avec un décaissement de moins d'un pour cent, ou des projets qui devraient être terminés 12 mois plus tard que la date prévue dans le dernier rapport périodique (décision 22/61).

**Annexe I****PROJETS EN COURS COMPORTANT DES QUESTIONS EN SUSPENS DANS LE RAPPORT PÉRIODIQUE DU PNUD**

<b>Pays</b>	<b>Titre/Code du projet</b>	<b>Taux de décaissement (%)</b>	<b>État/Questions</b>	<b>Recommandations</b>
<b>Projets relatifs aux CFC</b>				
Pakistan	Plan d'élimination des CFC dans la fabrication d' inhalateurs à doseur de qualité pharmaceutique (PAK/ARS/56/INV/71)	29	Projet présentant un retard (12 mois).	Demander au PNUD de faire rapport à la 80 <sup>e</sup> réunion sur ce projet présentant un retard.
			Le projet est techniquement terminé. Le ministère de la Santé exige une autorisation de produit réglementaire (de nombreux dossiers attendent des vérifications et des approbations depuis 2012). L'achèvement du projet est maintenant fixé à juin 2017.	Approuver la date d'achèvement révisé de juin 2017 comme date finale; et prier le PNUD de présenter un rapport d'achèvement de projet d'ici décembre 2017 et de retourner les soldes restants au plus tard en juin 2018.
<b>Projets relatifs à l'élimination des déchets de SAO</b>				
Brésil	Projet de démonstration pilote concernant la gestion et l'élimination des déchets de SAO (BRA/DES/72/DEM/305)	11	Des consultations visant à déterminer les entreprises chargées de l'élimination ont été organisées. Le projet ne s'est pas terminé en janvier 2017 comme prévu; un prolongement jusqu'à décembre 2019 a été demandé.	Réitérer la décision 77/8 e) i) et demander au PNUD de soumettre à la 80 <sup>e</sup> réunion un rapport détaillé sur ce projet à titre de projet comportant des exigences spécifiques en matière de rapport; et terminer le projet d'ici décembre 2017 en soulignant qu'une date d'achèvement (janvier 2017) avait déjà été fixée par le Comité.
Colombie	Projet de démonstration concernant la gestion et l'élimination des SAO (COL/DES/66/DEM/82)	66	Le test de combustion a été mené et les données collectées ont été analysées par l'expert international. La date prévue d'achèvement a été reportée d'avril 2017 à décembre 2017.	Réitérer la décision 77/8 e) i) et demander au PNUD de soumettre à la 80 <sup>e</sup> réunion un rapport détaillé sur ce projet à titre de projet comportant des exigences spécifiques en matière de rapport, et terminer le projet d'ici décembre 2017.
<b>Plans de gestion des frigorigènes</b>				
Maldives	Mise en œuvre d'un plan de gestion des frigorigènes : programme de sensibilisation et d'incitation (MDV/REF/38/TAS/05)	100	Le Comité a fixé la date d'achèvement à janvier 2016 et a demandé au PNUD de retourner les soldes restants à la 79 <sup>e</sup> réunion (décision 77/10 b)). Le PNUD a indiqué que le projet devrait	Réitérer la décision 77/10 b) et demander au PNUD d'indiquer que ce projet est terminé et de retourner tout solde restant au plus tard en janvier 2018.

Pays	Titre/Code du projet	Taux de décaissement (%)	État/Questions	Recommandations
			être terminé en décembre 2017, en soulignant qu'aucune activité n'a fait l'objet de rapport en 2016 en raison de l'absence de technologie de remplacement pour la reconversion.	
<b>Enquêtes sur les substances de remplacement des SAO</b>				
Cuba, Pérou, République islamique d'Iran			Un consultant a été engagé et, dans la plupart des cas, l'enquête est en cours.	Demander au PNUD de présenter les enquêtes sur les substances de remplacement des SAO à la 80 <sup>e</sup> réunion, conformément aux décisions 74/53 h) et 78/2 c).
Inde	Enquête sur les substances de remplacement des SAO à l'échelle nationale (IND/SEV/74/TAS/461)		Le gouvernement a demandé l'annulation du projet.	Approuver l'annulation du projet et demander au PNUD de retourner tout solde restant au plus tard en juin 2018.
<b>Renouvellement des projets de renforcement des institutions</b>				
Cuba	Phase X : 1/2016-12/2017 (CUB/SEV/75/INS/54)	0	L'accord n'a pas encore été signé.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre la signature de l'Accord.
<b>Tranches des plans de gestion de l'élimination HCFC</b>				
Barbade	Plan de gestion de l'élimination des HCFC (phase I, première tranche) (BAR/PHA/69/INV/21)	0	Taux de décaissement faible des fonds approuvés en raison de la signature tardive de l'Accord.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Bangladesh	Plan de gestion de l'élimination des HCFC (phase I, première tranche) (secteur de l'entretien de l'équipement de réfrigération) (BGD/PHA/65/INV/40)	0	Taux de décaissement faible des fonds approuvés en raison de la signature tardive de l'Accord.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.

Brésil	Plan de gestion de l'élimination des HCFC (phase I, quatrième tranche) (plan du secteur de la mousse) (BRA/PHA/74/INV/307)	0	Taux de décaissement faible des fonds approuvés en raison de l'utilisation des fonds des tranches précédentes.	Demander au PNUD de présenter à la 80 <sup>e</sup> réunion un rapport détaillé sur ces projets à titre de projet comportant des exigences spécifiques en matière de rapport, en vue de suivre le taux de décaissement faible des fonds approuvés.
Brésil	Plan de gestion de l'élimination des HCFC (phase II, première tranche) (secteur de la mousse) (BRA/PHA/75/INV/312)	0	Taux de décaissement faible des fonds approuvés en raison de l'utilisation des fonds des tranches précédentes.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Brésil	Plan de gestion de l'élimination des HCFC (phase II, première tranche) (entretien de l'équipement de réfrigération, mesures réglementaires et suivi du projet) (BRA/PHA/75/TAS/313)	3	Taux de décaissement faible des fonds approuvés en raison de la signature tardive de l'Accord.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Brésil	Plan de gestion de l'élimination des HCFC (phase I, cinquième tranche) (secteur de la mousse) (BRA/PHA/75/INV/315)	0	Taux de décaissement faible des fonds approuvés en raison de la signature tardive de l'Accord.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Colombie	Plan de gestion de l'élimination des HCFC (phase II, première tranche) (secteur de l'entretien de l'équipement de réfrigération) (COL/PHA/75/INV/96)	1	Taux de décaissement faible des fonds approuvés en raison de la signature tardive de l'Accord.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Colombie	Plan de gestion de l'élimination des HCFC (phase II, première tranche) (gestion, suivi et coordination du projet) (COL/PHA/75/TAS/91)	0	Taux de décaissement faible des fonds approuvés en raison de la signature tardive de l'Accord.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.

Colombie	Plan de gestion de l'élimination des HCFC (phase II, première tranche) (assistance technique pour la formulation et la mise en œuvre de politiques) (COL/PHA/75/TAS/92)	0	Taux de décaissement faible des fonds approuvés en raison de la signature tardive de l'Accord.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Colombie	Plan de gestion de l'élimination des HCFC (phase II, première tranche) (assistance technique pour le secteur de la protection incendie) (COL/PHA/75/TAS/94)	0	Taux de décaissement faible des fonds approuvés en raison de la signature tardive de l'Accord.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Guyane	Plan de gestion de l'élimination des HCFC (phase II, première tranche) (GUY/PHA/75/INV/28)	7	Taux de décaissement faible des fonds approuvés en raison de la signature tardive de l'Accord.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Indonésie	Plan de gestion de l'élimination des HCFC (gestion et coordination du projet) (phase I, deuxième tranche) (IDS/PHA/71/TAS/200)	0	Taux de décaissement faible des fonds approuvés. Les activités au titre de cette tranche ont été menées; les décaissements sont toutefois indiqués au titre des tranches les plus précocement approuvées.	Réitérer la décision 76/47 d) et demander au PNUD de présenter à la 80 <sup>e</sup> réunion un rapport détaillé sur ce projet à titre de projet comportant des exigences spécifiques en matière de rapport.
Inde	Plan de gestion de l'élimination des HCFC (phase I, troisième tranche) (plan du secteur de la mousse de polyuréthane et suivi du projet) (IND/PHA/75/INV/464)	0	Taux de décaissement faible des fonds approuvés; les fonds seront toutefois décaissés d'ici la fin 2017 après avoir revérifié les bénéficiaires.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Liban	Plan de gestion de l'élimination des HCFC (phase II, première tranche) (secteur de la climatisation) (LEB/PHA/75/INV/86)	0	Taux de décaissement faible des fonds approuvés en raison de la signature tardive de l'Accord.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Liban	Plan de gestion de l'élimination des HCFC (phase II, première tranche) (secteur de l'entretien de l'équipement de réfrigération) (LEB/PHA/75/INV/87)	0	Taux de décaissement faible des fonds approuvés.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.

Liban	Plan de gestion de l'élimination des HCFC (phase II, première tranche) (gestion et coordination du projet) (LEB/PHA/75/TAS/88)	0	Taux de décaissement faible des fonds approuvés en raison de la signature tardive de l'Accord.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Malaisie	Plan de gestion de l'élimination des HCFC (phase I, troisième tranche) (entretien de l'équipement de réfrigération, gestion et coordination) (MAL/PHA/75/TAS/179)	0	Taux de décaissement faible des fonds approuvés en raison d'un manque de personnel au bureau de pays du PNUD.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Népal	Plan de gestion de l'élimination des HCFC (phase I, première tranche) (NEP/PHA/66/INV/30)	19	Taux de décaissement faible des fonds approuvés en raison de catastrophes naturelles et de changements à l'UNO.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés en soulignant que ce projet a été approuvé il y a 12 réunions.
Népal	Plan de gestion de l'élimination des HCFC (phase I, deuxième tranche) (NEP/PHA/75/INV/35)	0	Taux de décaissement faible des fonds approuvés parce que l'Accord n'a pas été signé.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés et la signature de l'Accord.
Nigéria	Plan de gestion de l'élimination des HCFC (phase I, cinquième tranche) (secteur de la mousse et entretien de l'équipement de réfrigération) (NIR/PHA/75/INV/143)	0	Taux de décaissement faible des fonds approuvés en raison de la nécessité de mener un certain nombre d'activités.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.
Saint-Kitts-et- Nevis	Plan de gestion de l'élimination des HCFC (phase I, première tranche) (STK/PHA/64/TAS/16)	0	Taux de décaissement faible des fonds approuvés et établissement de la liste de spécifications de l'équipement.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés et l'établissement de la liste des spécifications de l'équipement, en soulignant que ce projet a été approuvé il y a 14 réunions.
Trinité-et-Tobago	Plan de gestion de l'élimination des HCFC (phase I, troisième tranche) (TRI/PHA/75/INV/33)	0	Taux de décaissement faible des fonds approuvés en raison de l'utilisation des fonds des tranches précédentes.	Demander un rapport de situation à la 80 <sup>e</sup> réunion en vue de suivre le taux de décaissement faible des fonds approuvés.

## Annexe II

### ANALYSE DU RAPPORT PÉRIODIQUE DU PNUD AU 31 DÉCEMBRE 2016

1. À cette date, le Comité exécutif avait approuvé 853,61 millions \$US, comprenant 752,02 millions \$US pour les projets d'investissement et les projets qui ne sont pas des projets d'investissement et 101,59 millions \$US pour les coûts d'agence et les coûts d'appui administratif, comme le montre le tableau 1. En 2016, 54 nouveaux projets et activités ont été approuvés. Ce financement devrait permettre d'éliminer 67 437 tonnes PAO de consommation de SAO.

**Tableau 1 : Financement approuvé pour le PNUD par secteur au 31 décembre 2016**

Secteur	Financement (\$US)
Aérosols	26 432 885
Destruction	3 622 896
Lutte contre l'incendie	50 000

\*Exclut les projets clos et transférés.

4. Le tableau 4 présente l'état d'avancement des projets par pays pour 2016.

<sup>5</sup> Les données sont présentées selon l'année au cours de laquelle un projet a été approuvé par le Comité exécutif. Toutes les approbations sont considérées également, qu'il s'agisse de projets d'investissement ou d'autres projets (un projet d'investissement ou une tranche de financement d'un projet pluriannuel de 1 million \$ US est considéré comme un projet, tout comme la préparation d'un projet national de 30 000 \$ US). Les indicateurs clés de ce sommaire annuel sont : le pourcentage de projets achevés, le PAO éliminé, et le pourcentage de fonds décaissés. Il y a trois types de décaissements : pendant la mise en oeuvre, après la mise en oeuvre et pour la mise en oeuvre de projets financés rétroactivement.

**Tableau 4 : Sommaire des projets mis en œuvre par le PNUD en 2016**

Pays	Élimination en 2016	Pourcentage d'élimination prévue obtenue en 2016	Estimation des fonds décaissés en 2016 (\$US)	Fonds décaissés (\$US)	Pourcentage de fonds décaissés dépassant l'estimation en 2016	Pourcentage de projets prévus achevés en 2016

**Executive Committee of the Multilateral Fund  
for the Implementation of the Montreal Protocol**

**UNDP Annual Progress and  
Financial Report Narrative:  
1991-2016**

79th Meeting, 3 – 7 July 2017, Bangkok, Thailand

## I. INTRODUCTION

The following narrative is based on a database of 2444 projects funded by the Multilateral Fund, which contains basic information on their status of implementation as of 31 December 2016. However, some updates of activities which took place during the first quarters of 2016 are also included for information purposes. The database results in 11 summary tables which can be found at the end of this report, and which are referred to throughout this narrative.

As can be seen in the following sections, UNDP has disbursed US\$ 673,832,335 of the US\$ 752,023,810 worth of projects that were approved under the Multilateral Fund since its inception in 1991. These programmes were supposed to eliminate 68,108 ODP T/year, of which 67,076 (98%) were phased out as of 31 December 2016. This demonstrates UNDP's important role in the success of MLF's assistance towards the elimination of Ozone Depleting Substances.

As of the end of 2016, UNDP was active in 47 countries, of which 24 are low volume consuming (LVCs). The vast majority of ongoing projects are implemented using the National Implementation modality, providing countries with larger country ownership.

A large portion of the current ongoing programmes consist of HCFC phase-out management plans (HPMPs). For these, UNDP is the lead agency in 29 countries. In addition, UNDP also acts as the cooperating agency for 18 countries. In 2016, there were only two remaining HPMPs (Mauritania and South Sudan), which were a part of UNDP's business plan and which have not been submitted yet. However, the Stage I HPMP for South Sudan has been submitted for consideration of the Executive Committee at the 77th meeting and it was approved by the Executive Committee. Stage I HPMP for Mauritania is expected to be submitted for consideration of the Executive Committee at its 80th meeting in the fall of 2017.

There is a surge of workload for UNDP to meet the needs of so many HPMPs that are currently under implementation. This significant workload comes at a time that preparation of Stage II HPMPs is under way. Most countries, for which UNDP is the lead agency, have submitted their requests for Stage II HPMP full proposals in 2015/2016 and five countries (Angola, Bangladesh, Democratic Republic of Congo, Nigeria, and Peru) are expected to submit their requests in 2017 and beyond. Despite this challenging situation, UNDP, with its network of country offices, remains fully committed to meet the increased workload and ensure that countries receive the assistance needed to be in compliance with all requirements of the Montreal Protocol.

UNDP has also been at the forefront of technical assessments and demonstration projects for potentially cost-effective alternatives to HCFCs that minimize environmental impacts, particularly for those specific applications where such alternatives are not presently available and applicable. Pursuant to ExCom decision 72/40, UNDP has submitted seven funding requests for the preparation of projects to demonstrate climate-friendly and energy-efficient alternative technologies to HCFCs, and feasibility studies on district cooling. All these projects were approved in 2015.

Finally, pursuant to the decision of XXVI/9 of the Twenty-Sixth Meeting of the Parties to the Montreal Protocol on Substances that Deplete the Ozone Layer, UNDP is also conducting twelve surveys of ODS alternatives, prioritizing the Foams, Refrigeration and Air Conditioning sectors in selected developing countries representing a balance of size and regional spread in order to: establish the market penetration of current commercially available alternatives, in terms of supply chain and costs, performance and environmental impact; and identify emerging alternatives, in terms of their expected market introduction and availability, performance and projected costs. ODS alternative surveys have been approved for Bangladesh,

Costa Rica, Cuba, Dominican Republic, El Salvador, India, Iran, Lebanon, Moldova, Panama, Paraguay, and Peru. UNDP submitted the majority of the surveys and is working towards finalizing them for Cuba, India, Iran, and Peru.

## **II. PROJECT APPROVALS AND DISBURSEMENTS**

### **A. Annual Summary Data (See table 1)**

Table 1: “Annual Summary” shows the important summary data on the number of project approvals, corresponding budgets, ODP, and disbursement figures. The table highlights that, cumulatively, as of 31 December 2016, UNDP had a total of 2444 approved projects under the Multilateral Fund, of which 94 had been canceled or transferred. Of the 2350 remaining projects, 2,144, or 91% have been completed. They are set to eliminate 67,437 ODP T/year, of which 66,440 ODP T (99%) have already been eliminated.

As of 31 December 2016, UNDP had received cumulative net project approvals of US\$ 752,023,810 (excluding support costs). Of these, UNDP, as of end-2016, had disbursed US\$ 673,832,335 excluding all obligations. This translates to 90% of approved funding. This is about the same as last year’s disbursement rate of 91%. Furthermore, an additional US\$ 862,156 of commitments were outstanding as of end-December 2016, representing orders placed but final payments not yet made.

### **B. Interest and Adjustments**

Interest income earned on MLF resources in 2016 is US\$ 659,668. Once the financial statements are submitted to the MLF Treasurer by the agreed deadline of 30 September, the difference between the provisional and final 2016 interest income can be adjusted against UNDP project approvals in 2017.

### **C. Summary Data By Type and Chemical [CPG, DEM, INS, INV, PRP, TAS, TRA] (See table 2)**

Table 2: Summary Data by Project Type presents an overview of the approvals by the type of project. It demonstrates that of the total amounts approved, 82.2% of the budgets were dedicated to investment projects, 5.2% to technical assistance projects, 5.7% to institutional strengthening and 3.5% to project preparation activities. The remaining 3.3% was dedicated to country programmes and demonstration/training activities.

## **III. PROJECT COMPLETIONS SINCE LAST REPORT**

### **A ODP Phased Out from Completed Investment Projects**

A total of 12 investment projects comprising 1 in foams and 11 in phase-out plans were completed between 1 January and 31 December 2016. Completed HPMP tranches phased out 3.8 ODP tonnes.

### **B. Non-Investment Project Completions Since The Last Report**

A total of 10 non-investment projects, comprising 4 institutional strengthening phases, and 6 preparatory activities were completed between 1 Jan and 31 Dec 2016.

## IV. GLOBAL AND REGIONAL PROJECT HIGHLIGHTS

- A. **Global Projects:** There is one on-going global programme under implementation by UNDP:

GLO/SEV/77/TAS/339, the Core unit support (2017) programme approved at the 77<sup>th</sup> meeting of the Executive Committee, that covers the administrative costs of UNDP's Montreal Protocol Unit; and continuation of Core Unit support at a level that allows UNDP to provide the oversight, reporting and assistance needed to sustain the large programme is critical.

- B. **Regional Projects:** There are no ongoing regional projects at this time.

## V. PERFORMANCE INDICATORS

### A. Results in 2016

Decision 41/93 of the Executive Committee approved the following indicators to allow for the evaluation of performance of implementing agencies, with the weightings indicated in the table below. Annex V of the report of the 77<sup>th</sup> meeting of the Executive Committee contained UNDP's 2016 targets. One can see from the table below that UNDP fully met 4 out of 9 of its targets and that its score amounts to 96.8%.

Category of performance indicator	Item	Weight	UNDP's target for 2016	Result achieved in 2016	Score
1. Approval	Number of tranches approved vs. those planned*	10	29	35 → 100% (see annex 1, 1)	10.0
2. Approval	Number of projects/activities approved vs. those planned (including project preparation activities)**	10	18	19 → 100% (see annex 1, 2)	10.0
3. Implementation	Funds disbursed	15	\$26,906,232	\$25.1 million → 93% (see annex 1, 3)	14.0
4. Implementation	ODS phase-out for the tranche when the next tranche is approved vs. those planned per business plans	25	390.2	360.7 → 92% (see annex 1, 4)	23.1
5. Implementation	Project completion vs. planned in progress reports for all activities (excluding project preparation)	20	23	24 → 100% (see annex 1, 5)	20.0
6. Administrative	The extent to which projects are financially completed 12 months after project completion	10	70% of those due	55 finrevs out of 57 96% (see annex 1, 6)	9.7
7. Administrative	Timely submission of project completion reports vs. those agreed	5	70% of those due	100% achieved (8 individual PCR submitted out of 8 planned and 1 MYA PCR submitted out of 1 planned -- see annex 1, 7)	5.0
8. Administrative	Timely submission of progress reports and responses unless otherwise agreed	5	On-time	100% achieved (see annex 1, 8)	5.0
TOTAL		100			96.8

\*The target of an agency would be reduced if it could not submit a tranche owing to another cooperating or lead agency, if agreed by that agency.

\*\* Project preparation should not be assessed if the Executive Committee has not taken a decision on its funding.

### B. Cumulative completed investment projects (Table 4)

As Table 4: Cumulative completed investment projects shows, a total of 1,142 investment projects have been completed, with a corresponding elimination of 61,056 ODP T. Of the US\$ 501,569,108 in their approved budgets in the sectors of Foam, Refrigeration, Phase-out Plan, Aerosol, Solvents, Fumigants, Halon, Process

Agents, and Sterilants, 100% has already been disbursed. It took an average of 13 months from approval to first disbursement and 33 months from approval to completion. The overall cost-effectiveness of the projects to the Fund was \$8.21 /kg. A breakdown of this group of projects is given by region, sector, implementation modality, etc.

C. **Cumulative completed non-investment projects (Table 5)**

As Table 5 shows, UNDP has completed 519 non-investment projects excluding project preparation assistance. Of the US\$ 88,564,664 in their approved budgets, 100% has been disbursed. It took an average of 13 months from approval to first disbursement and 40 months from approval to completion. A breakdown of this group of projects is given by region, type, sector, implementation modality, etc.

D. **Cumulative ongoing investment projects (Table 6)**

As can be seen in Table 6, UNDP has 86 ongoing investment projects in the sectors of Phase-out Plans, Foam Aerosol, and Fumigants with corresponding budgets of US\$ 108,493,219. Of this amount, 47% has already been disbursed. It takes an average of 11 months from approval to first disbursement and an average of 32 months from approval to the estimated project completion. The overall cost-effectiveness of the projects to the Fund was \$73.66 /kg. A breakdown of this group of projects is given by region, sector, implementation modality, etc.

E. **Cumulative ongoing non-investment projects (Table 7)**

Table 7 shows that UNDP has 84 ongoing non-investment projects excluding project preparation assistance. Of the US\$ 24,501,708 in approved budgets, 22% has been disbursed. It takes an average of 12 months from approval to first disbursement and 28 months from approval to the estimated project completion. A breakdown of this group of projects is given by region, type, sector, implementation modality, etc.

## **VI. STATUS OF AGREEMENTS AND PROJECT PREPARATION BY COUNTRY**

A. **Agreements To Be Signed/Executed/Finalized**

Since UNDP has a standard legal agreement in place in each developing country that covers UNDP activities in that country, no additional legal agreement is required. There were no specific issues related to this in 2016.

B. **Project Preparation By Country, Approved Amount And Amount Disbursed (Table 8)**

Table 8: Project Preparation by Country, Approved Amount and Amount Disbursed, indicates active project preparation accounts. Of the ongoing 36 PRP projects listed with US\$ 2,497,000 in associated approvals, 51% has been disbursed.

## **VII. DESCRIPTION OF KEY ONGOING ACTIVITIES**

This section contains a narrative description of the following key ongoing activities:

- A. Technology demonstration projects
- B. ODS destruction demonstration projects
- C. Country Highlights

## A. Technology demonstration projects

UNDP has been at the forefront of developing and implementing demonstration projects in various regions and sectors to assess relatively new technological developments for which little or no experience or data exists on technical performance and costs since 1996. The major objectives of such types of demonstrations were to find alternative solutions and cost-saving methods to the Multilateral Fund for the Implementation of the Montreal Protocol in order to carry out HCFC-investment activities in the future years, bearing in mind the impact on the climate. The results of the demonstrations of emerging technologies in various industrial processes under local conditions in the following countries are described below:

### A1. Demonstrations related to Stage I HPMPs

#### Brazil and Mexico

Pilot projects for the assessment of alternative technologies in PU Foam Applications were approved in Brazil and Mexico to develop, optimize and assess the use of methyl formate and methylal as blowing agents in PU applications. As a result of the demonstration projects, methyl formate was selected as an alternative technology in Egypt, Mexico, Nigeria, Brazil, Jamaica, Trinidad and Tobago, Cameroon, and some other countries. System houses in both Mexico and Brazil have adopted methylal technology in their HPMPs as a result of the successful pilot project.

#### China

##### *Foam Sector*

The Executive Committee approved a demonstration project to convert HCFC-22/HCFC-142b technology to CO<sub>2</sub> with methyl formate co-blown technology in the manufacture of extruded polystyrene foam at Feininger (Nanjing) Energy Saving Technology Co. Ltd. It can be concluded that the CO<sub>2</sub> and methyl formate formulation tested can be applied to XPS manufacturing given that thermal conductivity, compression strength and limited oxygen index are acceptable. It was also determined that using methyl formate as the co-blowing agent of CO<sub>2</sub> had no significant influence on the processing process of XPS board.

##### *Refrigeration and Air Conditioning*

- Demonstration project for conversion from HCFC-22 to HFC-32 in the manufacture of commercial air-source chillers/heat pumps at Tsinghua Tong Fang Artificial Environment Co. Ltd.: The project is the first in China to adopt HFC-32 in place of HCFC-22 in the production of small-sized commercial air-source chillers/heat pumps. The demonstration project has directly led to the use of HFC-32 as a major alternative to HCFC-22 in the industrial and commercial refrigeration sector plan of stage I of the HPMP for China. Further conversion activities to HFC-32 technology have been approved for the HPMP in Indonesia, Algeria and Thailand.

- Demonstration project for conversion from HCFC-22 technology to ammonia/CO<sub>2</sub> technology in the manufacture of two-stage refrigeration systems for cold storage and freezing applications at Yantai Moon Group Co. Ltd: The capacity of the production line has been converted to use substitute refrigerants and is capable of manufacture the converted products. The project has passed the national acceptance verification. The converted products have been put into use by users in Yantai, Weihai and Dalian. The market has expressed interest. The technology route is innovative, the resulting product has significant advantages in terms of environment friendliness and energy efficiency, and the safety performance is greatly improved.

#### *Solvents*

The Executive Committee approved a demonstration project for conversion from HCFC-141b based technology to iso-paraffin and siloxane (KC-6) technology for cleaning in the manufacture of medical devices at Zhejiang Kindly Medical Devices Co. Ltd. The project carried out an assessment of more than 15 solvents widely used in the medical devices sector globally. The project tested the use of KC-6 as an alternative to HCFC-141b. With necessary equipment modifications for needle assembly lines and silicification tooling cleaning line KC-3 presents itself as a viable alternative to HCFC-141b for cleaning in the manufacture of medical devices.

#### Colombia

The Executive Committee approved the assessment project for supercritical CO<sub>2</sub> technology in the manufacture of sprayed polyurethane rigid foams in Colombia. The project was designed to evaluate in developing countries the performance of super-critical CO<sub>2</sub>, a relatively new technology currently used in Japan for polyurethane (PU) spray rigid foam. Results from this project showed that supercritical CO<sub>2</sub> technology is a non-flammable, zero ODP and low GWP technology and it shouldn't create any additional industrial hygiene and safety hazards for the use as a replacement for HCFC-141b technology.

#### Egypt

Low cost options for the use of Hydrocarbons (HC) as foaming agents in the manufacture of PU Foam were considered as part of a demonstration project in Egypt. The objective of this project was to develop, optimize, and disseminate low-cost systems for the use of hydrocarbons in the manufacture of PU rigid insulation and integral skin foams. Both options that are emerging from the project—pre-blended cyclopentane systems and direct HC injection—have been selected for ODS phase-out projects in Brazil and Egypt. The findings of the demonstration project show that further mixing head optimization would be beneficial and might enhance the foam densities and reduce operational costs. This optimization was finalized at a system house in Egypt with the complementary report with additional findings submitted in 2015.

#### Nigeria

The hydrocarbon production demonstration project, being implemented at Pamaque Ltd as part of the HPMP in Nigeria (Stage 1), has been completed in its pilot phase in 2015, and the pilot plant commissioned on 19 November 2015. The establishment of the distillation and bottling unit has proved to be functional and safe. The commercial production is linked to private sector's further involvement and investment and work and consultations are still ongoing in this regard. Replication abroad is also being considered. A side event on the project was organized by UNDP and the Government of Nigeria at the 27th MOP in Dubai (1-5 November 2015) and a final report of this pilot demonstration project was submitted as an Annex to the request for the 5th tranche of the first stage of the HPMP, approved at the 75th ExCom Meeting.

#### Turkey

A pilot project validating the use of HFO-1234ze as Blowing Agent in the Manufacture of Extruded

Polystyrene (XPS) Foam Boardstock in Turkey was designed to assess the use of HFO-1234ze in a developing country context. All planned production trials have been completed in 2011 and early 2012 and a final assessment was submitted to the 67th ExCom. The current findings show that there is a need for further trials as this will help obtain better assessment of the feasibility of the technology for developing countries. Unfortunately, funding for these additional activities was not approved so that no final conclusions about the technical feasibility of this technology could be arrived at.

#### A2. Demonstrations related to Stage II HPMPs

Pursuant to ExCom decision 72/40, UNDP is preparing additional projects to demonstrate climate-friendly and energy-efficient alternative technologies to HCFCs, and feasibility studies on district cooling. UNDP has prepared and received approval for eight demonstration projects for the following seven countries. Please, see the brief update on the status of projects.

- **China:** demonstrating ammonia semi-hermetic frequency convertible screw refrigeration compression unit in the industrial and commercial refrigeration industry.

In order to produce the small discharge semi-hermetic frequency convertible screw refrigeration compression unit with ammonia as a viable replacement for HCFC-22 technology, the Executive Committee approved a demonstration project at its 76<sup>th</sup> meeting. The production line will be redesigned, modified and constructed to fit the small discharge semi-hermetic frequency convertible screw refrigeration compressor and compression unit. In order to expand the application of NH<sub>3</sub> in the small and medium industrial and commercial refrigeration field, the type of NH<sub>3</sub> compressor will be changed to semi-hermetic. With the prototype production, safety protection articles and training are needed for manufacturing personnel. The project has entered into the phase of implementation. The training for designers was held in December 2016. The design of compressors and pressure tanks have recently been finished. Some materials for manufacturing the prototypes have been procured. The project will be completed as planned.

- **Colombia:** Demonstration of HC-290 (propane) as an alternative refrigerant in commercial air-conditioning manufacturing at Industrias Thermotar Ltda.

Currently, the project is in the initial phase, developing the prototypes of the equipment and the review by the international expert of the safety aspects. The company has also carried out the process of selecting the supplier of the technology for the modification of production line and is preparing the prototypes to carry out the tests of performance and security.

- **Colombia:** Demonstration project to validate the use of hydrofluoro-olefins for discontinuous panels in Article 5 parties through the development of cost-effective formulations.

A Collaboration Agreement between the local stakeholders (company and the Ministry of Environment) has been drawn up and signed. The project is in the second stage oriented to the development of formulations with HFO according to the experimental protocol designed with support of the international expert. Next steps will involve carrying out laboratory and field tests.

- **Costa Rica:** Demonstration of the application of an ammonia/carbon dioxide refrigeration system in replacement of HCFC-22 for the medium-sized producer and retail store of Pomezclas Industriales S.A.

The project team is developing agreements, contracts and adjustments to the schedule in order to start the civil works for the assembly of the equipment. The evaluation of proposal for supplying the equipment has been conducted and the contract was signed.

- **Dominican Republic:** feasibility study for district cooling in Punta Cana.

The study was conducted and a final report was prepared. The study showed that district cooling is a viable approach for this location, avoiding emission of ODS (future need of approximately 1000 kg can be avoided) and GHG (8.500 ton CO<sub>2</sub>/year reduction). A seminar to present the findings and results was organized and attracted the interest of many stakeholders.

- **Egypt:** demonstrating low-cost options for the conversion to non-ODS technologies in polyurethane foams at very small users.

Project documentation has not yet been cleared by the Government, and once this milestone is achieved and the project is registered, the implementation works will commence in full. Initial technology provider survey and contacts (with one mission) have been made by the project team to save time and speed up the project implementation.

- **Kuwait:** demonstrating HCFC-free low-global warming potential technology performance in air-conditioning applications.

Project documentation was signed with the Government in the beginning of 2017, and currently a joint work is being carried out to prepare technical specifications for procurement of the required demonstration equipment. International tender is to be announced in second quarter of 2017.

- **Maldives:** testing HCFC-free low-global warming potential alternatives in refrigeration in fisheries sector are being tested.

Demonstration project for HCFC-free low-global warming potential alternatives in refrigeration in fisheries sector was approved at the 76<sup>th</sup> ExCom. The project results can be used in other countries that have similar HCFC use in fishing industry and thus help the countries addressing challenges in fishing industry, particularly sea-borne vessels' HCFC refrigerant use. The process of selection of the consultant is underway and the project will be completed in stipulated time.

## B. ODS destruction demonstration projects

The UNDP Montreal Protocol & Chemicals Unit has been supporting countries to take steps to manage their stocks of ODS, which cannot be reused in a sound way. The potential for recovery, proper management and final disposal of such unwanted ODS and ODS containing appliances/equipment banked, have been proven as being possible in developed countries if the proper legislation and price incentives, as well as business opportunities, exist. However, the applicability of banks management schemes in developed countries needs to also be demonstrated in Article 5 countries. The Executive Committee has approved preparation activities for Brazil, Colombia, Cuba, Georgia, Ghana and India, to address ODS waste management leading to ODS destruction. Five such projects (Brazil, Colombia, Cuba, Georgia, and Ghana) have been submitted and approved by the Executive Committee in prior years.

The project in **Brazil** is advancing in both, strengthening of the collection center network (reclaim centers) and identification of possible locations for the destruction facility. A procurement process to purchase the

required equipment to strengthen the reclaim center is ongoing and expected to be finalized in May 2017. Regarding the destruction facility, a potential incinerator located in São Paulo/SP was identified through an Expression of Interest. This process is being finalized and the official result should be available in May 2017. In addition, a meeting with CETESB, the Environmental Agency of São Paulo state, was held in order to present the project and to agree the role of this important stakeholder in the project implementation.

The project in **Colombia** has advanced on two fronts, the assessment of the local capabilities to destroy ODS and the establishment of a scheme for sound environmental disposal of equipment containing ODS. Regarding the assessment, two burning tests have been conducted, collected data was analyzed by the international expert. Findings show that the country has the capability to dispose of the ODS locally but continuous monitoring of the destruction facility and the feed rate is required to ensure the fulfillment of the local emission regulations. Concerning the scheme for the sound environmental management of ODS containing equipment, advances have been made to put in place a voluntary extended producer responsibility scheme, initially for domestic refrigerators, that would support the collection and disposal of ODS containing equipment.

**Cuba:** All the civil works and burning tests were completed, leading to start the destruction of ODS in Cuba, nevertheless the supply of material for destruction and the control of the feed current into the kiln are challenging which has been a key aspect highlighted in other projects of this kind.

The project in **Georgia** has been completed and enabled export and disposal of ODS waste in partnership with a parallel GEF-funded POPs pesticides destruction project. Currently, a final report is being prepared for submission to the MLF Secretariat. Overall, 1.5 tons of ODS waste was exported for sound disposal to EU. Lessons learned will be reflected in the report.

From the **Ghana** demonstration project, the lesson was that a specific strategy and methodology should be devised during the design stage to deal with the foam part of the refrigerators, and not only focusing on ODSs to be collected as refrigerants. In Ghana it was possible to find an environmentally adequate solution through the cooperation with other ongoing projects in the country to make sure that the foam was disposed of and that gases in the foam would be appropriately managed.

### C. Country Highlights (January – December 2016)

UNDP has been at the forefront of innovative solutions for countries to address their Montreal Protocol compliance obligations. UNDP's work has resulted in market transformation for the introduction of environment-friendly products and corresponding policy and technological advances and has bought to countries access to emerging technologies, reduced energy bills for consumers, fostered innovation, and created a more equitable market for greener products, allowing indigenous manufacturers to maintain competitiveness.

The next section showcases several prominent examples showing the impact of UNDP's support at the country level.

#### **Colombia**

At the 76<sup>th</sup> meeting of the ExCom in May 2016, funds were approved for the development of the demonstration project “Demonstration project to validate the use of Hydrofluoro Olefins (HFO) for discontinuous panels in Article 5 parties through the development of cost effective formulations”. This project undertakes the validation of the Hydrofluoro Olefins (HFOs), a low GWP and non-flammable

option, for discontinuous panels in the scenario of the Article 5 parties through the development of polyurethane (PU) foam formulations with reduced HFO contents that have CO<sub>2</sub>, derived from the water-isocyanate reaction, as co-blowing agent. The aim is to optimize the cost/performance balance while achieving a similar foam thermal performance to that of HCFC-141b based formulations. The results of this project will support the implementation of the foam component of several HPMP in the country and around the globe.

### **Costa Rica**

UNDP and the Government of Costa Rica are working to implement a demonstration project aimed to the application of an ammonia/carbon dioxide (R-717/R-744) refrigeration system in replacement of HCFC-22 for the medium-sized producer and retail store at Pomezclas Industriales S.A. in Costa Rica which was approved during the 76<sup>th</sup> meeting of the ExCom. This project will allow to identify the key aspects that need to be considered when using R-717/R-744 as alternative to HCFC-22. The information collected will be used for developing standards and guidelines for the design, installation and operation of this kind of systems in countries with similar climatic conditions as those of Costa Rica.

### **Chile**

UNDP and the Governments of Colombia and Chile worked together to promote the exchange of experiences concerning the approach to phase out the use of HCFC-141b as flushing agent during the maintenance of refrigeration and air conditioning systems. Technical personnel of Colombia's NOU visited Chile to support the activities conducted by their Chilean counterparts, explaining the approach used in Colombia for phasing out this use. This exchange strengthened the relationship between NOUs and created knowledge networks that foster the ODS phase out activities in the countries.

### **Egypt**

As a part of the Stage 1 HPMP, the Government of Egypt and UNDP have successfully completed all approved individual PU foam programmes – 6 enterprises have transitioned to non-ODP/low GWP technologies such as methyl formate and hydrocarbons (HC). The results of previous low-cost HC demonstration programme were useful in addressing HCFC-141b consumption in PU foam companies with lower HCFC use, where otherwise HC technologies would not be implemented due to higher capital costs. In the past, activities focused on the system house level with polyol blending enterprises participating and initiating chemical formula preparation with methyl formate, methylal and other technologies to transfer them to downstream users. Currently, UNDP is focusing on the start-up of the demonstration projects, such as on very-small PU foam users in Egypt, aimed to reduce equipment costs and ensure better utilization of MLF funds. The programme is in initial stages of implementation, going through registration phase with the Government.

### **Kyrgyzstan**

In 2015, the Government of Kyrgyzstan and UNDP/UNEP jointly formulated an accelerated HCFC phase-out programme to achieve by 2020 a 97.5% reduction in the servicing sector with a service tail of 2.5% remaining until 2025. This HCFC reduction ahead of usual phase-out time was a decision of the Government based on its accession to the Customs Union's framework constituted by Art 2 group of countries in the former Soviet Union where HCFCs use is controlled by accelerated schedules and this recommendation was adopted by Kyrgyzstan for its own context. The Stage II HPMP programme was approved in May 2015 and is now in its implementation phase on the ambitious path towards substantive HCFC phase-out by 2020. The programme had its inception round of workshops, and plans for an initial R&R tool procurement round to further strengthen the country's capability to address its dependence on HCFCs are underway. The project is currently working to equip professional vocational schools with interactive training equipment and is starting to establish contacts with future employers of graduate

students to ensure on-job practical training and confidence in future employment opportunities in the servicing sector. This is one of new approaches for the servicing sector ensuring less drop-out rates from vocational schools, or changes in careers after the graduation due to low earnings.

### **Maldives**

UNDP supported the Government of Maldives to retrofit the fishery vessels charged with HCFC-22. Five conversions have been completed in 2016. As no drop-in substitute was not available at that time so the country opted for R438A, which have slightly higher GWP than HCFC 22. After retrofitting the units are running in perfect state without any failure. Maldives is now promoting reclamation of HCFC-22 within the country.

### **Mauritius (GEF)**

UNDP and the Government of Mauritius had prepared and submitted to GEF a new conceptual approach for energy audits of installed larger RAC equipment, preventive maintenance via online performance monitoring and market transformation to enable uptake of energy efficient low-GWP technologies while skipping HFC solutions (supported by an incentive system). This project concept was technically cleared by GEF, awaiting financial acceptance. The cooperation is established with the HPMP programme implemented by GIZ.

### **Sri Lanka**

In Sri Lanka, the Government received support from UNDP in promoting the reclamation of refrigerants and Colombo has received the large amount of HCFC-22 for reclamation. This demonstrates the need for more equipment in the refrigeration and air conditioning sector. Thanks to the efforts of the National Ozone Unit, the Government of Sri Lanka has approved 30% duty on HCFCs starting 1<sup>st</sup> January 2017 and further from 1<sup>st</sup> January 2018 there will be a complete ban on imports of HCFC based equipment. This is the major achievement that will reduce the imports of HCFCs and lead to adoption of alternate technology products.

### **A side event at MOP-28 on Conversion Projects from HFCs to Hydrocarbons in the Refrigeration Manufacturing Sector (Walton, Bangladesh and Palfridge, Swaziland)**

At the 28<sup>th</sup> MOP in Kigali, Rwanda UNDP, together with the US Department of State and GIZ, has organized a side event to showcase the experiences of Walton and Palfridge in selecting hydrocarbons as alternatives to phase down HFCs in refrigerator manufacturing operations. During the time of the CFC phase-out, some enterprises directly phased out their use of CFC-12 to iso-butane, while others chose to move to HFC-134a technology. As HFCs are not yet a part of the Montreal Protocol, the Multilateral Fund has not funded the transition from HFC-134a to iso-butane. However, two such transitions have already taken place at Walton, Bangladesh (funded by the US Department of State) and Palfridge, Swaziland (funded by GIZ).

Through MLF funding, UNDP assisted Walton in its conversion from HCFCs to hydrocarbons. Additional funding was made available from the US Department of State to phase out the use of HFC-134a as a refrigerant and adopt iso-butane in one production line of the domestic refrigeration manufacturing facility. This latter effort would result in about 65 MT of HFC-134a reduction on an annual basis through the elimination of the initial charge, or 85,300 tonnes CO<sub>2</sub> equivalent per year (only refrigerant charge related). In addition, a saving of about 14 million KWH annually is expected through energy efficiency improvements in the product (at baseline production levels), leading to additional

climate benefits.

With the financial support and technical assistance from GIZ Proklima, one of Swaziland's largest private companies and employers is a refrigeration company, Palfridge Limited / The Fridge Factory took a decision to convert their production lines to the use of natural refrigerants. The project converted the entire production of domestic and commercial refrigeration appliances to hydrocarbon refrigerants (domestic fridges, commercial refrigerators for supermarkets and bottle coolers, solar refrigerators including a solar-powered vaccine cooler). The conversion of the annual production of approx. 60,000 units to natural refrigerants cut direct emissions of F-gases by up to 14,800 tonnes CO<sub>2</sub> equivalent per year; the new units save more than 20% energy consumption compared to conventional ones. Following this transition to climate-friendly refrigerants, Palfridge was subsequently supported to convert from HCFC-141b to cyclo-pentane for the foam used in its refrigerators – this transition was supported by UNDP through Swaziland's MLF-funded HPMP (for which UNEP is the lead agency).

## VIII. ADMINISTRATIVE ISSUES (OPERATIONAL, POLICY, FINANCIAL, OTHER)

### A. Meetings Attended by UNDP in 2016

From	To	Country	Meeting
13-Jan-16	15-Jan-16	China	Policy Support and Programme Oversight
9-Feb-16	12-Feb-16	Uruguay	Policy Support and Programme Oversight
9-Feb-16	12-Feb-16	Peru	Policy Support and Programme Oversight
14-Feb-16	19-Feb-16	India	Policy Support and Programme Oversight
15-Feb-16	18-Feb-16	Maldives	Policy Support and Programme Oversight
20-Feb-16	25-Feb-16	Kuwait	Policy Support and Programme Oversight
29-Feb-16	1-Mar-16	Canada	Policy Support and Programme Oversight
29-Feb-16	2-Mar-16	Canada	Policy Support and Programme Oversight
29-Feb-16	4-Mar-16	Kyrgyzstan	Policy Support and Programme Oversight - Bishkek
5-Mar-16	9-Mar-16	Angola	Policy Support and Programme Oversight
15-Mar-16	21-Mar-16	Zimbabwe	Policy Support and Programme Oversight West Asia Network Meeting
17-Mar-16	22-Mar-16	Zimbabwe	Regional joint network meeting of ozone officers - West Asia and Northern Africa (organized by UNEP CAP) - Victoria Falls
21-Mar-16	23-Mar-16	Georgia	Policy Support and Programme Oversight - Tbilisi
3-Apr-16	9-Apr-16	Switzerland	37 <sup>th</sup> Open Ended Working Group
4-Apr-16	8-Apr-16	Switzerland	Policy Support and Programme Oversight
11-Apr-16	12-Apr-16	France	UNEP-International Stakeholder workshop- assessment of Training in Refrigeration Servicing sector (organized by UNEP CAP) - Paris
12-Apr-16	16-Apr-16	Paraguay	Policy Support and Programme Oversight
7-May-16	15-May-16	Canada	76 <sup>th</sup> Executive Committee Meeting
9-May-16	11-May-16	Nigeria	Policy Support and Programme Oversight, Lagos and Abuja
9-May-16	13-May-16	Canada	Policy Support and Programme Oversight
15-May-16	20-May-16	Chile	Regional network meeting of ozone officers - Latin America and the Caribbean (organized by UNEP CAP) - Santiago de Chile.

<b>From</b>	<b>To</b>	<b>Country</b>	<b>Meeting</b>
22-May-16	24-May-16	Egypt	Policy Support and Programme Oversight - Cairo
23-May-16	24-May-16	Dominican Republic	Policy Support and Programme Oversight
26-May-16	27-May-16	Turkmenistan	Regional network meeting of ozone officers - Europe and Central Asia (organized by UNEP CAP) - Ashgabat
1-Jun-16	3-Jun-16	Colombia	Policy Support and Programme Oversight
8-Jun-16	10-Jun-16	Uruguay	Policy Support and Programme Oversight
12-Jun-16	18-Jun-16	Fiji	Policy Support and Programme Oversight
30-Jun-16	5-Jul-16	India	Policy Support and Programme Oversight
4-Jul-16	6-Jul-16	Dominican Republic	Policy Support and Programme Oversight
15-Jul-16	16-Jul-16	Austria	37 <sup>th</sup> Open Ended Working Group (Resumed)
18-Jul-16	21-Jul-16	Austria	38 <sup>th</sup> Open Ended Working Group, Vienna
25-Jul-16	29-Jul-16	Timor-Leste	Policy Support and Programme Oversight

11-Sep-16	13-Sep-16	El Salvador	Policy Support and Programme Oversight
14-Sep-16	16-Sep-16	Brazil	Policy Support and Programme Oversight
14-Sep-16	16-Sep-16	Dominican Republic	Policy Support and Programme Oversight
19-Sep-16	22-Sep-16	Sweden	Policy Support and Programme Oversight
20-Sep-16	21-Sep-16	Swaziland	Policy Support and Programme Oversight, Mbabane
8-Oct-16	13-Oct-16	Rwanda	28 <sup>th</sup> Meeting of the Parties
10-Oct-16	15-Oct-16	Rwanda	Policy Support and Programme Oversight
7-Nov-16	11-Nov-16	Moldova	Regional network meeting of ozone officers - Europe and Central Asia (organized by UNEP CAP) - Chisinau
25-Nov-16	2-Dec-16	Canada	Policy Support and Programme Oversight
28-Nov-16	2-Dec-16	Canada	Policy Support and Programme Oversight
6-Dec-16	8-Dec-16	Barbados	Regional network meeting of ozone officers - Latin America and the Caribbean for English speaking countries and Haiti (organized by UNEP CAP) - Bridgetown.
22-May-17	28-May-17	Malaysia	Policy Support and Programme Oversight

B. **Other Issues.**

There were no specific issues in 2016 that need to be addressed

## **ANNEX 1: Tables related to the Performance Indicators**

### **1. Performance Indicator 1: MYAs**

Approvals for multi-year agreements are listed in the following table.

<b>Country</b>	<b>Short Title</b>
Angola	Stage I HPMP
Armenia	Stage II HPMP
Bhutan	Stage I HPMP
Chile	Stage II HPMP (foam sector )
Chile	Stage I HPMP
China	Stage II HPMP (industrial and commercial refrigeration and air-conditioning sector plan)
China	Stage II HPMP (solvent sector plan)
Cuba	Stage I HPMP
Dominican Republic	Stage II HPMP
El Salvador	Stage I HPMP
Fiji	Stage I HPMP
Ghana	Stage I HPMP
Haiti	Stage I HPMP
Indonesia	Stage I HPMP
Indonesia	Stage II HPMP (firefighting sector)
Indonesia	Stage II HPMP (refrigeration servicing sector)
India	Stage II HPMP (polyurethane foam sector plan)
India	Stage II HPMP (air-conditioning manufacturing sector plan)
India	Stage II HPMP (project management and monitoring)
Iran	Stage II HPMP(foam sector)
Jamaica	Stage I HPMP
Cambodia	Stage I HPMP
Malaysia	Stage II HPMP (polyurethane foam sector)
Malaysia	Stage I HPMP
Malaysia	Stage II HPMP(refrigeration servicing sector)
Malaysia	Stage II HPMP (management and coordination)
Mali	Stage I HPMP
Moldova	Stage II HPMP
Panama	Stage II HPMP (foam sector)
Panama	Stage II HPMP (refrigeration servicing sector)
Sri Lanka	Stage I HPMP
Uruguay	Stage II HPMP (foam sector)
Uruguay	Stage II HPMP (refrigeration servicing sector)
Uruguay	Stage II HPMP (implementation and monitoring)
Venezuela	Stage II HPMP (foam sector)

## **2. Performance Indicator 2: Individual Projects**

The number of individual projects approved in 2016 are listed in the following table.

Country	Short Title
Argentina	Extension for institutional strengthening project (phase IX: 7/2016-6/2018)
Bangladesh	Renewal of the institutional strengthening project (phase VIII: 1/2017-12/2018)
Colombia	Demonstration project to validate the use of hydrofluoro-olefins for discontinuous panels in Article 5 parties through the development of cost-effective formulations
Costa Rica	Demonstration of the application of an ammonia/carbon dioxide refrigeration system in replacement of HCFC-22 for the medium-sized producer and retail store of Pomezclas Industriales S.A.
China	Demonstration project for ammonia semi-hermetic frequency convertible screw refrigeration compression unit in the industrial and commercial refrigeration industry at Fujian Snowman Co. Ltd.
China	Extension of the institutional strengthening project (phase XII: 1/2017-12/2018)
Egypt	Demonstration of low-cost options for the conversion to non-ODS technologies in polyurethane foams at very small users
Ghana	Extension of the institutional strengthening project (phase XII: 1/2017-12/2018)
Global	Core unit budget (2017)
India	Extension of institutional strengthening project (phase X: 4/2016-3/2018)
Iran	Extension of the institutional strengthening project (phase XI: 4/2017-3/2019)
Kuwait	Demonstration project for HCFC-free low-global warming potential technology performance in air-conditioning applications (capacity above 8TR)
Kyrgyzstan	Verification report for stage I of HCFC phase-out management plan
Lebanon	Extension of the institutional strengthening project (phase X: 4/2017-3/2019)
Maldives	Demonstration project for HCFC-free low-global warming potential alternatives in refrigeration in fisheries sector
Nigeria	Extension of the institutional strengthening project (phase X: 12/2016-11/2018)
Pakistan	Extension of the institutional strengthening project (phase IX: 4/2017-3/2019)
Sri Lanka	Extension of the institutional strengthening project (phase XI: 1/2017-12/2018)
Venezuela	Renewal of institutional strengthening project (phase XIII: 1/2017-12/2018)

## **3. Performance Indicator 3: Funds disbursed**

2016 Disbursements	25,076,224
--------------------	------------

## **4. Performance Indicator 4: 2016 ODS phase-out**

MLF Number	Short Title	ODP to be Phase d Out
ANG/PHA/77/INV/18	HCFC phase-out management plan (stage I, fourth tranche)	0
ARM/PHA/77/INV/18	HCFC phase-out management plan (stage II, first tranche)	0
BHU/PHA/76/TAS/26	HCFC phase-out management plan (third tranche)	0.1
CHI/PHA/76/INV/190	HCFC phase-out management plan (stage II, first tranche) (foam sector)	12
CHI/PHA/76/INV/192	HCFC phase-out management plan (stage I, fourth and fifth tranches)	5.9
CPR/PHA/77/INV/577	HCFC phase-out management plan (stage II, first tranche) (industrial and commercial refrigeration and air-conditioning sector plan)	72.1
CPR/PHA/77/INV/580	HCFC phase-out management plan (stage II, first tranche) (solvent sector plan)	0

MLF Number	Short Title	ODP to be Phase d Out
CUB/PHA/77/INV/56	HCFC phase-out management plan (stage I, third tranche)	0

PAN/FOA/72/PRP/37	Dec-16
PAN/PHA/72/PRP/38	Dec-16
PAN/SEV/71/INS/36	Jun-16
PAR/FOA/57/PRP/21	Dec-16
PER/PHA/68/INV/46	May-16
TRI/PHA/71/TAS/30	Dec-16
URU/PHA/72/PRP/61	Dec-16
URU/PHA/75/INV/66	Dec-16
VEN/FOA/72/PRP/126	Dec-16

#### **6. Performance Indicator 6: Final Revisions**

Last year's database counted 81 projects operationally completed before 1 Jan 2016, which could have been financially completed in 2016. This year's database counts 55 projects for which a final revision was issued in 2016, which equals 68% of the total or 96.5% of our target of 57 projects.

#### **7. Performance Indicator 7: PCRs**

100% achieved (1 multi-year PCRs and 8 individual PCR submitted out of 3 PCRs scheduled for submission in 2016).

#### **8. Performance Indicator 9**

Progress Report produced on 1 May 2017 as required.
