COMITÉ EJECUTIVO DEL FONDO MULTILATERAL
PARA LA APLICACIÓN DEL
PROTOCOLO DE MONTREAL

Trigésima sexta Reunión
Montreal, 20 al 22 de marzo de 2002

PROPUESTAS DE PROYECTO: CHINA

Este documento contiene los comentarios y recomendaciones de la Secretaría del Fondo sobre los siguientes proyectos:

Espumas

- Eliminación de CFC-12 en la fabricación de redes de embalaje de espumas plásticas de polietileno (EPE) en 30 empresas (Proyecto general final) ONUDI

Otros

- Informe de ejecución de 2001 y plan de trabajo de 2002 en el plan de sector de tabaco para la eliminación gradual de CFC-11 en China (segunda cuota) ONUDI

Producción

- Plan sectorial para la eliminación gradual de producción de CFC en China, programa anual de 2002 Banco Mundial

Refrigeración

- Sustitución de refrigerante CFC-12 por HCFC-22 en la fabricación de motocompresores abiertos medianos en Dalian #2 Refrigeration Machinery Factory Banco Mundial
- Sustitución de refrigerante CFC-12 por HCFC-22 en la fabricación de motocompresores abiertos medianos y pequeños en Shanghai Minhang Refrigerator Factory Banco Mundial
- Sustitución de refrigeración CFC-12 por HCFC-22 en la fabricación de motocompresores abiertos pequeños en Zhejiang Beifeng Refrigeration Machinery Co. Ltd Banco Mundial
- Sustitución de refrigeración CFC-12 por HCFC-22 en la fabricación de motocompresores abiertos pequeños en Zhejiang Chunlian Refrigeration Machinery Co. Ltd Banco Mundial
- Sustitución de refrigeración CFC-12 por HCFC-22 en la fabricación de motocompresores abiertos pequeños en Zhejiang Yuhuan Refrigeration Machinery Co. Ltd Banco Mundial

Solventes

- Programa de ejecución de 2002 del plan sectorial de solventes en China PNUD

HOJA DE EVALUACIÓN DE PROYECTOS CHINA

SECTOR: Espumas Uso de SAO en el sector (1999): 23,143 toneladas PAO

Umbral de relación de costo-eficacia del subsector: Poliestireno/polietileno EUA \$8.22/Kg

Títulos de proyecto:

- a) Eliminación de CFC-12 en la fabricación de redes de embalaje de espumas plásticas de polietileno (EPE) en 30 empresas (Proyecto general final)

Datos del proyecto	Poliestireno/polietileno	
	30 empresas	
Consumo de la empresa (toneladas PAO)		849.00
Impacto del proyecto (toneladas PAO)		
Duración del proyecto (meses)		30
Suma inicial solicitada (EUA \$)		1,118,726
Costo final del proyecto (EUA \$):		
Costo adicional de capital a)		6,552,000
Costo de imprevistos b)		625,200
Costos adicionales de explotación c)		-1,361,967
Costo total del proyecto (a+b+c)		5,815,233*
Propiedad local (%)		100%
Componente de exportación (%)		0%
Monto solicitado (EUA \$)		1,530,000
Costo a eficacia (EUA \$/Kg)		
Financiación de contraparte confirmada?		Sí
Organismo nacional de coordinación	SEPA	
Organismo de ejecución	ONUUDI	

Recomendaciones de la Secretaría	
Monto recomendado (EUA \$)	
Impacto del proyecto (toneladas PAO)	
Costo a eficacia (EUA \$/Kg)	
Gastos de apoyo del organismo de ejecución (EUA \$)	
Costo total del Fondo Multilateral (EUA \$)	

*La ONUUDI solicita financiamiento parcial del monto de la donación.

DESCRIPCIÓN DEL PROYECTO

Antecedentes sectoriales

1. En la 35ª Reunión de diciembre de 2001, el Comité Ejecutivo aprobó un acuerdo de eliminación gradual de CFC en el sector de espumas de poliuretano en China, con un objetivo de eliminación gradual total de 14,143 toneladas PAO de CFC-11 y un financiamiento total de EUA \$53.85 millones. Además, el Comité aprobó un proyecto general final por un valor de EUA \$2,450,123 para eliminar gradualmente 359 toneladas PAO de CFC-12 en la fabricación de espumas de poliestireno extruído. La aprobación de este proyecto de espuma de poliestireno extruído, por lo tanto, resultará en el financiamiento del consumo total de CFC en el sector de espumas de China.

2. El consumo residual que queda por tratar en China el Fondo Multilateral fue identificado en el acuerdo sectorial de espumas de poliuretano en 4,745 toneladas PAO de CFC. Esta cantidad se reducirá mediante el consumo aprobado en la 35ª Reunión de 359 toneladas PAO de CFC-12, que se eliminarán gradualmente en el proyecto general final de espumas EPS, así como 849 toneladas PAO en el proyecto general final de espumas EPE, si se aprueba en la 36ª Reunión.

Espuma de polietileno / poliestireno

Información sobre los antecedentes del subsector

3. La eliminación gradual de CFC-12 del subsector de espumas de polietileno y poliestireno forma parte de un plan de estrategia presentado por la ONUDI al Comité Ejecutivo en su 33ª Reunión. El plan estratégico previó la presentación, por parte de China, de 5 proyectos grupales para eliminar gradualmente un total de 6,661 toneladas PAO de CFC-12 en la fabricación de espumas de poliestireno y polietileno extruído. Dos proyectos generales por un total de EUA \$9,8 millones han sido aprobados en la 25ª y 28ª Reuniones. Los tres proyectos grupales restantes se programaron para presentarse de la manera siguiente:

1. Mediados de 2001 Proyecto grupal final EPE (30 empresas)
2. Finales de 2001 1^{er} proyecto grupal EPS (9 empresas)
3. Mediados de 2002 Proyecto grupal final EPS (7 empresas)

No obstante, a solicitud del Gobierno de China el segundo y tercer proyecto grupal se presentarían en 2001, dejando el proyecto final EPE para 2002.

4. A continuación se da el resumen de los grupos de proyectos en el sector EPE / EPS de China, dentro del plan estratégico:

Fecha	Proyecto	No. de empresas	Monto de la donación EUA \$	Eliminación de CFC toneladas PAO
Proyectos aprobados				
Julio de 1998	Proyecto grupal EPE	25	4,488,516	1,146.0
Julio de 1999	Proyecto grupal EPE	27	5,289,441	825.7
Julio de 2001	Proyecto grupal EPS	9	2,808,338	750.0
Diciembre de 2001	Proyecto final EPS	7	2,450,123	359.0
TOTAL		68	15,036,418	3,080.7
Proyectos en curso				
Marzo de 2002	Proyecto final EPE	30	5,815,000	849.0

5. En vista de las limitaciones de planificación administrativa, la ONUDI solicita una revisión adicional al programa de financiamiento de los proyectos EPE / EPS que están bajo el plan estratégico, de la manera siguiente:

- a) Aprobar en principio el proyecto grupal restante, es decir el proyecto general final EPE para 30 empresas en la 36^a Reunión.
- b) Aprobar el pago de los costos adicionales admisibles del proyecto en tres porciones, que entrarían dentro de los planes administrativos 2001-2003.

6. En consecuencia, el proyecto se presenta a la 36^a Reunión, tal como ha sido solicitado por la ONUDI, con el acuerdo del Gobierno de China. El programa de pagos y cualquier otra condición pertinente se comunicará al Subcomité de examen de proyectos, una vez que se haya convenido el nivel admisible de financiamiento sobre el que todavía deliberan la Secretaría y la ONUDI.

Proyecto general final: 30 empresas

7. Las 30 empresas incluidas en el proyecto general consumieron un total de 849 toneladas PAO de CFC-12 por año en la producción de redes de espuma de polietileno extruido. Todas esas empresas funcionan con extrusionadoras de un solo husillo de capacidad de 105-115 kg/hora fabricadas en China; sesenta de las sesenta y una extrusionadoras se instalaron en 1993 y 1994. La extrusionadora restante se instaló en enero de 1995. El perfil de 30 empresas aparece en la Tabla 1 siguiente.

8. Las empresas convertirán su producción de CFC-12 a butano, como agente de espumación. El proyecto incluye costos de capital adicionales para las 30 empresas por un valor de EUA \$6,552,000, lo que cubre el costo de equipamiento de las 61 líneas de extrusión existentes, instalaciones de almacenamiento de butano y equipos de seguridad y protección contra incendio, así como asesoría, pruebas, capacitación y acreditación en cuestiones de seguridad. Los ahorros de explotación adicionales, de un total de EUA \$1,361,967 se deducen de los respectivos presupuestos, conforme al nivel de consumo de CFC-12.

COMENTARIOS Y RECOMENDACIONES DE LA SECRETARÍA

COMENTARIOS

9. La Secretaría identificó numerosas cuestiones técnicas que sigue todavía tratando con la ONUDI. El nivel total de financiamiento de los proyectos, así como su desglose por empresa, se comunicará al Subcomité de examen de proyectos. Tal como se especifica en el párrafo 6 anterior, el programa y las condiciones acordadas de la liberación de financiamiento también se comunicará a dicho Subcomité.

RECOMENDACIONES

Pendiente.

DESCRIPCIÓN DEL PROYECTO

Informe de ejecución de 2001 y plan de trabajo de 2002, bajo el plan sectorial de tabaco, para la eliminación gradual de CFC-11 en China (segunda cuota)

Antecedentes

10. En su 30ª Reunión, el Comité Ejecutivo aprobó en principio EUA \$11 millones para la ejecución del plan sectorial de tabaco destinado a eliminar gradualmente CFC-11 en China (plan sectorial) y solicitó a la ONUDI que preparara un proyecto de acuerdo en el que se establecieran las modalidades de pago, los requisitos de cumplimiento y los procedimientos de supervisión del plan sectorial.

11. En la 32ª Reunión del Comité Ejecutivo, la ONUDI presentó un proyecto de acuerdo a lo solicitado bajo la Decisión 30/54, junto con un programa de trabajo anual para 2001, a un costo de EUA \$2 millones. En consecuencia el Comité Ejecutivo decidió:

- a) aprobar el acuerdo entre el Gobierno de China y el Comité Ejecutivo (UNEP/OzL.Pro/ExCom/32/44 Anexo XIII);
- b) aprobar EUA \$2 millones para la puesta en ejecución del programa de trabajo de 2001;
- c) solicitar a la ONUDI que informe en una reunión futura al Comité Ejecutivo sobre el uso de financiamiento asignado a los costos de apoyo, que serían revisados en dos años (Decisión 32/69).

12. El Gobierno de China presentó a consideración del Comité Ejecutivo en su 36ª Reunión un informe de avance sobre la puesta en ejecución del programa de trabajo de 2001, junto con una solicitud por un monto de EUA \$2 millones para la ejecución del programa de trabajo anual correspondiente al año 2002.

Informe de avance sobre la puesta en ejecución del programa de trabajo de 2001

13. A comienzo de 2001, se puso en vigencia un sistema de permisos para cuotas de consumo de CFC-11 en el sector tabaquero. El sistema determinó una cuota de consumo de CFC-11 para cada compañía correspondiente al año 2001, conforme con el consumo total de CFC-11 para el sector de tabaco y el nivel de producción real de la empresa. Se asignó a cada empresa un permiso de cuota de consumo de CFC-11. Conforme a las estadísticas mensuales dadas por las compañías, el consumo total anual de CFC-11 hasta diciembre de 2001 se estimó en 956,7 toneladas.

14. Las compañías admisibles para la expansión de tabaco fueron invitadas a eliminar gradualmente su cuota de CFC-11 correspondiente a 2001 mediante un sistema de licitación pública. La licitación tuvo lugar en enero de 2001; diez compañías que deseaban desmantelar su equipo de CFC-12 en 2001 presentaron sus ofertas (la ONUDI fue informada de los procesos de licitación y todos los documentos pertinentes fueron examinados por el organismo de ejecución).

15. En febrero de 2001, la Dirección Estatal de Tabaco (STMA) y la Dirección Estatal de Protección de Medio Ambiente (SEPA) establecieron un Comité Ejecutivo de evaluación para examinar las ofertas que se habían presentado. El Comité Ejecutivo seleccionó ocho juegos de equipos de expansión pertenecientes a siete compañías para desmantelamiento; una unidad adicional que funciona en Wuhu Cigarette Factory y que fue instalada después del 25 de julio, se desmanteló a solicitud de la compañía, sin ninguna compensación por parte del Fondo Multilateral. En total se eliminaron gradualmente 97,4 toneladas de CFC-11, tal como aparece en la tabla siguiente:

No. en el plan del sector	Nombre de la compañía	Equipo		CFC-11 (toneladas)
		Monto	Fecha de instalación	
18	Tongren Cigarette Factory	1	agosto de 91	6.3
20	Bijie Cigarette Factory	1	octubre de 93	0.0
22	Lichuan Cigarette Factory	1	abril de 92	25.0
23	Zaoyang Cigarette Factory	1	marzo de 92	21.8
42	Chongqing Cigarette Factory	1	octubre de 92	8.5
52	Hangzhou Cigarette Factory	1	octubre de 87	22.3
56	Yuxi Hongta Group Changchun Cigarette Factory	2	enero de 85	5.8
33	Wuhu Cigarette Factory(*)	1	diciembre de 96	5.0
Total		9		94.7

(*) El Fondo Multilateral no proveyó compensación alguna.

16. Cada vez que se desmanteló un equipo de expansión de tabaco de CFC-11, los miembros del Grupo de trabajo especial del plan sectorial de tabaco, la Oficina de Cooperación Económica Extranjera de SEPA, la Dirección Provincial de Tabaco correspondiente, la oficina local de protección del medio ambiente y los miembros de la oficina del notario público local estuvieron presentes (el proceso de desmantelamiento se grabó en video y se fotografió, además de notariarse; las cintas y las fotografías fueron guardadas por el Grupo de trabajo especial para examen por parte de los organismos de ejecución).

17. Durante la ejecución del proyecto, el Gobierno de China decidió que era necesario investigar y analizar más para tratar los problemas que pudieran surgir en la aplicación de los instrumentos de control y de su cumplimiento con la Organización Mundial del Comercio (OMC). Se espera que a comienzos de 2002 se establezca un mecanismo de gestión comercial (la primera medida esperada es una proscripción de la importación y/o exportación de tabaco expandido con CFC-11 y/o cigarrillos que utilizan tabaco expandido con la misma sustancia).

18. En 2001 se llevaron a cabo las siguientes actividades técnicas:

- a) un taller de capacitación para las direcciones provinciales de tabaco y las compañías tabaqueras destinado a tratar las modalidades de ejecución del plan sectorial, en Guangzhou, en diciembre de 2000;
- b) una reunión para explicar el sistema de cuota propuesto y establecer el sistema de gestión y supervisión para la aplicación del plan sectorial, en enero de 2001;
- c) desarrollo de un sistema de gestión información que ahora está funcionando,

establecido en la sede y las oficinas locales de STMA y SEPA. El sistema supervisa el consumo de CFC-11 a nivel de la empresa, impidiendo que se consuma más allá de las cuotas asignadas; identifica la capacidad de inactividad y la disponibilidad de tabaco expandido;

- d) en diciembre de 2001, se inició un sondeo en Henan Xinzheng Cigarette Factory para investigar el efecto del embalaje en el tabaco expandido, que se transporta. Asimismo en marzo de 2001 el Zhengzhou Tobacco Research Institute fue seleccionado para preparar un estudio de optimización del transporte de tabaco expandido;
- e) Los expertos y técnicos de las empresas que fabrican equipos para la expansión de tabaco con CFC-11 fueron invitados a tratar los temas relacionados con el mayor consumo de CFC-11 en algunas compañías comparado con los niveles estándares (Guiyang, Zunyi, Xiamen, Shaoguan, Zhangjiakou y Longyan). En función del trabajo realizado por los expertos, los resultados de tabaco expandido por unidad de CFC-11 utilizada aumentaron. Los expertos también prepararon un “Manual de equipo de expansión de tabaco con CFC-11” que se distribuyó entre las compañías tabaqueras.

Programa de trabajo anual para 2002

19. Las principales actividades que se ejecutarán en el Programa de trabajo de 2002 son:

- a) en el primer trimestre de 2002, el Gobierno de China establecerá una cuota de consumo total de 880 toneladas de CFC-11. A esto seguirá una licitación pública dirigida a las empresas restantes que se califican para la eliminación gradual de hasta 120 toneladas de CFC-11, conforme al plan sectorial;
- b) se firmarán los contratos de desmantelamiento de equipos con los oferentes seleccionados y el desmantelamiento de equipos será supervisado conforme a los procedimientos establecidos en 2001;
- c) se pondrá en vigencia un mecanismo de gestión comercial que prohíba la importación y/o exportación de tabaco expandido con CFC-11;
- d) se realizarán actividades de asistencia técnica que incluyen: la finalización del estudio sobre los mecanismos de gestión comercial, incluyendo su cumplimiento con las reglas de la OMC; la continuación del trabajo en la reducción del monto de CFC utilizado para el equipo de expansión existente; estudios de factibilidad sobre el abastecimiento de tabaco expandido mediante empresas agrupadas; y la optimización del transporte de tabaco expandido;
- e) Los indicadores de resultados para las actividades propuestas que se llevaran a cabo en 2002 se indican en la siguiente tabla:

Objetivo de eliminación de CFC-11			
Consumo actual (toneladas PAO)	Objetivo de eliminación gradual en (toneladas PAO)	Consumo al final de (toneladas PAO)	Indicadores de resultados
1,000	120	880	Nivel nacional de consumo nacional y nivel de consumo residual de los usuarios
Aplicación de la política			
Medidas de políticas		Indicadores de resultados	
Cuotas de CFC-11 permitidas para 2002, 880 toneladas máximo		Asignación y aplicación de cuotas	
Actividades a nivel de la compañía			
Actividad	Indicadores de resultados		
Cierre de equipos de expansión con CFC-11 (64 líneas)	1. Licitación para seleccionar las líneas que se cerrarán completamente. 2. Firma de contratos. 3. Desmantelamiento de líneas de producción. 4. Presentación de Informes sobre los procesos de desmantelamiento y finalización del proyecto.		
Actividades de asistencia técnica			
Actividad	Indicadores de resultados		
Información, concienciación y capacitación	Fechas de actividades de capacitación y divulgación de material informativo, por determinarse.		
Estudio sobre mecanismo de gestión comercial	Proscripción de todas las importaciones y exportaciones de tabaco expandido mediante el uso de CFC-11 y de cigarrillos hechos con tabaco expandido con CFC-11, por anunciarse.		
Continuación del trabajo para la reducción de consumo de CFC-11 en los equipos existentes	Expertos para terminar la asesoría técnica y la capacitación y presentar los informes de resultados.		
Estudios de factibilidad sobre abastecimiento de tabaco expandido	Resultados de los estudios de factibilidad, por presentarse.		
Estudio sobre transporte de tabaco expandido	Informe final, por presentarse.		

COMENTARIOS Y RECOMENDACIONES DE LA SECRETARÍA

COMENTARIOS

20. La Secretaría examinó el informe de avance sobre la puesta en ejecución del programa de trabajo de 2001, presentado por la ONUDI, y lo comparó con el acuerdo entre el Comité Ejecutivo y el Gobierno de China sobre la estrategia de eliminación gradual para el sector tabaquero. La Secretaría hizo notar que a través de las actividades realizadas en 2001, el consumo de CFC-11 para la expansión de tabaco había disminuido en 94,7 toneladas PAO (4,7 toneladas PAO más de la cantidad acordada).

21. La Secretaría también tomó nota de la realización de actividades de asistencia técnica llevadas a cabo en 2001, en particular el establecimiento de un sistema de gestión de información que, entre otras cosas, supervisa el consumo de CFC-11 a nivel de la planta, impidiendo que se consuma más de las cuotas asignadas; y de la reducción de consumo de CFC-11 en algunas compañías.

22. Para el programa de trabajo correspondiente al año 2002, la Secretaría observó que el objetivo de eliminación gradual de CFC-11 de 120 toneladas PAO está en conformidad con la cantidad que se debe eliminar indicada en el acuerdo.

RECOMENDACIÓN

23. El Comité Ejecutivo puede querer considerar la aprobación del programa de trabajo de 2002 del Plan sectorial de tabaco para la eliminación gradual de CFC-11 en China y asignar EUA \$2 millones para su puesta en ejecución.

24. Conforme a la Decisión 32/69, el Comité Ejecutivo puede también querer solicitar a la ONUDI que informe sobre el uso del financiamiento asignado a los costos de apoyo junto con el Plan de trabajo correspondiente al año 2003.

DESCRIPCIÓN DEL PROYECTO

25. El programa anual de 2002 para la eliminación gradual del sector de producción de CFC en China fue presentado por el Banco Mundial y aprobado por el Comité Ejecutivo en su 35ª Reunión en diciembre de 2001, con la observación de que “el financiamiento solicitado sería presentado por el Banco Mundial en la 36ª Reunión, junto con un informe de verificación sobre la puesta en ejecución del programa anual de 2001.”(Decisión 5/49)

26. Tal como se solicitó, el Banco Mundial presenta a la 36ª Reunión el informe de verificación sobre la puesta en ejecución del programa de eliminación gradual de producción de CFC para 2001 en China (ver Anexo I) que contiene la verificación del cierre completo de tres plantas, incluidas en el programa anual de 2001 (identificado por el informe de auditoría SRIC como A7, A11 y B5), y de siete plantas, que estaban produciendo con el sistema de cuotas en el programa anual de 2001 (identificado por el informe de auditoría SRIC como A8, A10, A13, A14, B8, B12, y B14).

27. El informe contiene cinco partes. La Parte 1 es un resumen de los resultados más importantes obtenidos en parámetros como el consumo global de materias primas y la evaluación global de los logros del objetivo del plan anual de 2001. La Parte 2 es una descripción de la verificación de las siete plantas que producían ateniéndose a la cuota de 2001. Comienza con una evaluación del seguimiento, puesto en ejecución por la planta, de las mejoras sugeridas y, propuestas por la última auditoría, y continúa con los comentarios sobre la calidad del mantenimiento del registro de datos y una discusión detallada de la metodología y de los datos utilizados para verificar la producción de CFC y el consumo de materias primas. La Parte 2 concluye con la identificación de las cuestiones y su conclusión.

28. La Parte 3 presenta los resultados conforme al formato aprobado por el Comité Ejecutivo y contiene los datos sobre capacidad de producción, mezcla de productos, cuota de producción y producción, relación de consumo de materias primas y consumo real, y días de operación. La Parte 4 contiene la verificación del cierre y desmantelamiento de tres plantas en 2001, donde los datos fueron incorporados siguiendo el formato aprobado por el Comité Ejecutivo, y concluye con una evaluación del desmantelamiento final. Para terminar, la Parte 5 incluye una auditoría financiera de la planta como esfuerzo para confirmar los resultados a partir de la auditoría física de la planta.

29. La evaluación global de la verificación es que China cumplió con el objetivo anual establecido en el acuerdo para el año 2001, con la producción real total de 36,196.1 toneladas PAO, que es inferior a la del acuerdo, de 36,200 toneladas PAO. Con el informe de verificación, el Banco Mundial solicita la liberación de EUA \$13 millones y los costos de apoyo asociados para el programa anual de 2002.

COMENTARIOS Y RECOMENDACIONES DE LA SECRETARÍA

COMENTARIOS

Cumplimiento con las pautas de verificación de la eliminación gradual de producción de SAO

30. La verificación del programa de trabajo de 2001 muestra mejoras significativas en el cumplimiento de las pautas de verificación de la eliminación gradual de producción de SAO, comparado con los informes de años anteriores. Estas mejoras ya eran evidentes en el informe de verificación revisado del programa de trabajo de 2002 presentado en julio de 2001, por el Banco Mundial, cuando solicitó el segundo 50% del financiamiento para el programa de trabajo de 2001. Se cumple más con los formatos aprobados y hay una descripción mucho más detallada de la metodología y la adecuación de los documentos de apoyo utilizados para rastrear y validar la producción de CFC y el consumo de materias primas. Hay asimismo un tratamiento más completo de las cuestiones identificadas y un seguimiento anual de estas cuestiones para asegurar las mejoras.

Cuestiones relacionadas con el cumplimiento de cuotas de producción

31. En dos casos, Zhejiang Chemical Research Institute para la cuota de CFC-114 y Jiangsu Changsu 3F Refrigerant Co. Ltd. para la cuota de CFC 11, el informe de verificación advirtió que había escaso margen en estas dos plantas con respecto al cumplimiento de sus cuotas. En el caso de Zhejiang Chemical Research Institute, hay una producción de 6,833 toneladas de CFC-114, lo que significa una sobreproducción de 0,033 toneladas de la cuota de 6,8 toneladas. La planta cumplió con la cuota sólo porque la 0,033 tonelada se redondeó a un decimal al hacerse el informe. En el caso de 3F, la planta trató las pérdidas como crédito contra sus cuotas asignadas, lo cual fue cuestionado por el equipo de verificación basándose en que cualquier producto terminado que saliera a la atmósfera debería considerarse como liberación de SAO y, por lo tanto, la producción y la manera de tratar las pérdidas podrían determinar la diferencia entre el cumplimiento y no-cumplimiento con la cuota para la planta, dado que la producción indicada de CFC-11 es de 8,221.9 TM y la cuota es de 8,222 TM.

32. Debería existir una manera normalizada de tratar pérdidas significativas de productos terminados y una supervisión más estrecha de las aplicaciones de las cuotas por parte del Gobierno. Se hace notar, sin embargo que el Gobierno ha introducido inspección por pares en sitio entre los productores restantes de CFC para llevar a cabo una mayor supervisión.

Datos a partir de la verificación financiera

33. La introducción de la verificación financiera para reforzar la auditoría es una muy buena iniciativa; sin embargo no hay suficientes datos que se proveen en la Parte 5 del informe para tener un punto de vista sobre los resultados y llegar a cualquier conclusión.

34. No hay informe financiero sobre los gastos relacionados con el programa de asistencia técnica y la verificación no los abarca. No obstante, hay una asignación financiera significativa para el programa. No queda claro si el Banco Mundial trata de cubrir el programa de asistencia técnica con la auditoría financiera o cuáles son los mecanismos que el Banco usa actualmente para verificar

este programa, específicamente la frecuencia de información financiera y el organismo que lleva a cabo la auditoría.

Examen de los aranceles administrativos para el Banco Mundial

35. El Acuerdo establece que “el Banco Mundial ha acordado ser el organismo de ejecución de este proyecto. El arancel para los tres primeros años será del 9% de los costos del proyecto, por año, desembolsados durante ese período de tiempo.” El año 2002 será el cuarto año del programa y se debería revisar el arancel administrativo del Banco Mundial para determinar a) el interés del arancel y b) la duración de dicho arancel.

RECOMENDACIONES

36. La Secretaría recomienda que el Comité Ejecutivo asigne al Banco Mundial EUA \$13 millones para la puesta en ejecución del programa de trabajo de 2002 del programa de eliminación gradual de producción de CFC en China.

37. La Secretaría recomienda que el Comité Ejecutivo decida sobre el nivel del arancel administrativo que se debería pagar al Banco Mundial para la continuación de la administración del programa y la duración de dicho arancel. Una vez que se haya determinado el porcentaje, se debería pagar al Banco Mundial el arancel administrativo asociado para el programa de trabajo de 2002 de China.

38. La Secretaría recomienda que el Banco Mundial suministre información sobre la verificación financiera del programa de asistencia técnica, específicamente la frecuencia de los informes financieros y la institución que lleva a cabo la auditoría.

HOJA DE EVALUACIÓN DE PROYECTO CHINA

SECTOR: Refrigeración Uso de SAO en el sector (2000): 6,855 toneladas PAO

Umbral de relación de costo-eficacia del subsector: Comercial EUA \$15.21/Kg

Títulos de proyecto:

- a) Sustitución de refrigerante CFC-12 por HCFC-22 en la fabricación de motocompresores abiertos medianos en Dalian #2 Refrigeration Machinery Factory
- b) Sustitución de refrigerante CFC-12 por HCFC-22 en la fabricación de motocompresores abiertos medianos y pequeños en Shanghai Minhang Refrigerator Factory
- c) Sustitución de refrigeración CFC-12 por HCFC-22 en la fabricación de motocompresores abiertos pequeños en Zhejiang Beifeng Refrigeration Machinery Co. Ltd
- d) Sustitución de refrigeración CFC-12 por HCFC-22 en la fabricación de motocompresores abiertos pequeños en Zhejiang Chunlian Refrigeration Machinery Co. Ltd
- e) Sustitución de refrigeración CFC-12 por HCFC-22 en la fabricación de motocompresores abiertos pequeños en Zhejiang Yuhuan Refrigeration Machinery Co. Ltd

DESCRIPCIÓN DEL PROYECTO

Antecedentes sectoriales

- Datos últimos disponibles del consumo de SAO (1999)	67,580 toneladas PAO
- Consumo básico de sustancias del Anexo A Grupo I (CFC)	57,818 toneladas PAO
- Consumo de sustancias del Anexo A Grupo I para el año 1999	42,983 toneladas PAO
- Consumo de CFC en el sector de refrigeración industrial y comercial para el año 2000, incluyendo servicio	6,855 toneladas PAO
- Fondos aprobados para proyectos de inversión en el sector de refrigeración industrial y comercial al final de 2000	EUA \$43.8 millones
- Cantidad de CFC por eliminar en proyectos de inversión en el sector de refrigeración al final de 2000	4,200 toneladas PAO

39. En 1995, China desarrolló su estrategia para la eliminación gradual del consumo de CFC-12 en el sector de refrigeración comercial e industrial. El consumo en el sector se estimaba en 13,000 toneladas PAO, en función de la demanda irrestricta de 1995. La estrategia describía el estado del sector en 1993 y preveía la eliminación completa de CFC en el sector para 2004, basándose en la solicitud de compensación solamente para la conversión de 24 empresas que producían compresores, de las 73 empresas que aparecen en la estrategia. Los costos asociados con el cierre de las 49 empresas restantes así como los costos relacionados para el equipamiento de los equipos de refrigeración existentes y destinados a utilizar refrigerantes sin CFC y los costos de recuperación, reciclaje y reclamación serían pagados por el Gobierno de China. Posteriormente China presentó proyectos para 19 de esas empresas y un proyecto de asistencia técnica para la actualización del General Machinery Research Institute. Estos proyectos fueron aprobados por el Comité Ejecutivo dentro del período que va de 1995 a 1999 a un costo total de 43,8 millones para eliminar 4,200 toneladas PAO. La tecnología seleccionada se basó en HCFC-22 y la capacidad prevista de la conversión de esas empresas era de unas 185,000 unidades por año.

40. Para abril de 2001, seis proyectos habían sido terminados por el Banco Mundial. La puesta en ejecución de los proyectos de compresores comerciales se ha evaluado en el contexto de la estrategia para la eliminación de consumo de CFC-12 en el sector de refrigeración comercial e industrial en China. El informe de evaluación fue presentado en la 34ª Reunión, en la que el Comité Ejecutivo tomó la Decisión 34/13. Esta decisión reconocía la capacidad sub-utilizada de producción después de la conversión y entre otras cosas suministraba guías específicas sobre la preparación de propuestas de proyectos futuros en el sector para lograr una conversión más sostenible a un costo más bajo.

41. En la 35ª Reunión del Comité Ejecutivo el Gobierno de China presentó a través del Banco Mundial la versión revisada del Plan sectorial sobre la eliminación de consumo de CFC-12 y CFC-11 en el sector de refrigeración comercial e industrial y cinco proyectos de inversión para conversión de instalaciones que fabrican compresores. El Comité Ejecutivo tomó nota de la estrategia revisada y adoptó la Decisión 35/50 en consecuencia.

42. La Decisión 35/50 estipula que, conforme a la estrategia de sector, los cinco proyectos restantes deberían presentarse a la 36ª Reunión del Comité Ejecutivo. La decisión da flexibilidad al Gobierno de China para utilizar los costos adicionales identificados que pueden no necesariamente implicar conversión de las cinco empresas en cuestión, con el fin de poner en ejecución las actividades de eliminación requeridas en el sector en la mejor relación e costo-eficacia.

Descripción del proyecto

43. Las cinco compañías produjeron motocompresores abiertos de tamaño pequeño y mediano de varios modelos y también equipos de refrigeración, como evaporadores, condensadores, aire acondicionados y unidades de condensación. Además de utilizar sus propios compresores, las empresas importaron compresores herméticos y semi herméticos que utilizan HCFC-22 para la fabricación de equipos de refrigeración. Las cinco compañías convertirán su producción a tecnología con HCFC-22.

44. Las cinco propuestas fueron presentadas inicialmente por el Banco Mundial para consideración en la 35ª Reunión del Comité Ejecutivo. Los resultados del examen preliminar de la Secretaría se dan a conocer en los comentarios de la misma al Comité Ejecutivo, que sirvieron como base para la formulación y adopción de la Decisión 35/50. Las propuestas se prorrogaron hasta la 36ª Reunión. El Banco Mundial presentó versiones revisadas de las cinco propuestas, con alguna información adicional, pero no todo fue coherente con lo que aparecía en la propuesta original. Esta información ha sido tomada en consideración por la Secretaría durante el examen. No obstante, los datos pertinentes a los seis proyectos aparecen, en este documento de evaluación, como aparecieron en las propuestas originales que formaron la base de la advertencia al Comité Ejecutivo en la 35ª Reunión.

45. En los 19 proyectos hasta ahora aprobados, la transferencia de tecnología iba a efectuarse mediante la compra de nuevos diseños de compresores de los países que no están al amparo del Artículo 5. Dada las dificultades de ejecutar lo anterior, en la Decisión 34/13 el Comité Ejecutivo decidió que para los cinco proyectos restantes, podía lograrse una conversión más sostenible a un costo más bajo actualizando los diseños de compresores disponibles localmente con asistencia de la red local de universidades y centros de investigación y asesores internacionales. En consecuencia, cuatro compañías solicitan costos de transferencia de tecnología de EUA \$100,000 y una compañía, de EUA \$120,000.

46. Dado que las dimensiones de las piezas más importantes de los nuevos compresores son diferentes y dado que se necesita una más alta precisión, las herramientas de medición exclusivas que existen tendrán que sustituirse. Cada compañía solicita financiamiento para el suministro de centros de maquinado computarizado (NCC), para maquinados de carters, entre EUA \$390,000 y EUA \$600,000 por unidad, dependiendo de los tamaños de los compresores producidos. En cada una de las cuatro propuestas de proyecto se solicitan dos NCC y en el proyecto Dalian se solicita un centro, lo que equivale a un total de 9 máquinas.

47. El costo del NCC representa la porción más importante de cada solicitud de financiamiento. También se solicitan fondos para la adquisición de equipos de maquinado computarizado más pequeños y producidos localmente. Estos equipos fabricarían cigüeñales, bielas y placas de válvulas en cada propuesta particular, dependiendo de la configuración del proceso de producción.

48. El costo de conversión también incluye el reemplazo de herramientas de maquinado, accesorios exclusivos, equipos de prueba, producción de ensayos, capacitación y seguro de embarque e instalación.

49. Los costos para contingencias se calculan al 10% del costo de capital. El 12% del factor de descuento se aplicó a cinco propuestas para compensar la actualización tecnológica. Las propuestas de proyectos contienen el cálculo de los costos de explotación. No obstante, estos costos no se solicitan. Los costos adicionales totales se calculan en EUA \$7,745,773.

Justificación para el uso de HCFC-22

50. Se da la justificación para el uso de HCFC y se adjunta como Anexo II a esta evaluación. La carta de compromiso correspondiente al financiamiento de la contraparte también se adjunta a cada propuesta y está disponible en la Secretaría si se la solicita.

COMENTARIOS Y RECOMENDACIONES DE LA SECRETARÍA

COMENTARIOS

51. La Secretaría ha examinado las cinco propuestas a la luz de la aprobación de 19 proyectos en el subsector de fabricación de compresores comerciales, la evaluación del sector de fabricación de compresores en China y la Decisión 34/13 resultante así como la Decisión 35/50 (Estrategias para compresores de refrigeraciones comerciales en China) y la Decisión 35/48 (Plan de eliminación en el sector de espumas de China). La Secretaría también trató las cinco propuestas con el Banco Mundial. Se determinaron varias cuestiones.

Número de centros de control computarizado (NCC)

52. El número de NCC puede calcularse para cada empresa utilizando el número de horas de trabajo por año, el tiempo de maquinado requerido por compresor y el nivel de producción exigido. No obstante, este cálculo debería llevarse a cabo después de tomar en consideración la parte pertinente de las Decisiones 34/13 y 35/50 que determinan que como base de cálculo para el equipo caro debería utilizarse el tiempo de funcionamiento prolongado. Además, coherente con la práctica de los 19 proyectos aprobados, los NCC deberían utilizarse para maquinado de alta precisión final mientras que el equipo existente que se guarda se debería utilizar para maquinado basto. Esto reducirá el tiempo requerido para maquinado y por lo tanto el número de máquinas necesarias.

53. La Shanghai Minhang Refrigeration Factory, para la cual se solicitan dos máquinas, pertenece a Zhejiang Chunhui Group que ya ha recibido financiamiento de unos EUA \$2,2 millones para cuatro NCC, que actualmente no se utilizan completamente. Por lo tanto, siguiendo la Decisión 34/13, hay posibilidades de racionalización.

54. Sobre esta base, la Secretaría y el Banco Mundial acordaron el número admisible de unidades NCC, que resultó en una máquina NCC por empresa, en cuatro propuestas, y dos máquinas en el caso de Zhejiang Chunlian, que es la que tiene la más alta producción de las cinco empresas. Los costos adicionales de capital han sido calculados para cada empresa en consecuencia.

Costos adicionales para máquinas NCC

55. Antes de la 22ª Reunión del Comité Ejecutivo se realizó una investigación exhaustiva y la Secretaría y el Banco Mundial deliberaron sobre los costos adicionales para máquinas NCC. Los resultados de estas deliberaciones fueron que los costos adicionales para máquinas NCC, entre EUA \$460,000 y EUA \$560,000, para los tamaños de máquinas pertinentes, acompañados por un factor de actualización tecnológica del 20 por ciento, se reducían a costos basados en estimados recibidos, dentro de los EUA \$300,000 a EUA \$350,000 acompañados por un factor de actualización tecnológica reducido al 12 por ciento. Estos parámetros fueron utilizados en siete proyectos aprobados en la 22ª Reunión y en tres proyectos aprobados en la 28ª Reunión. En los proyectos actuales el Banco Mundial ha propuesto costos revisados de EUA \$390,000 y EUA \$600,000, junto con el mismo factor de actualización tecnológica del 12 por ciento. El Banco ha indicado que estos costos se basan en adquisiciones reales en los proyectos ejecutados. No obstante, el costo de máquinas que las empresas seleccionadas no es necesariamente pertinente a la determinación de los costos adicionales admisibles. La Secretaría recomienda que los costos de las máquinas deberían permanecer iguales a los ya asociados al factor de actualización tecnológica y establecidos en proyectos previos, como admisibles para financiamiento, a saber: una máquina al costo de EUA \$350,000 y cinco al costo de EUA \$300,000.

Otros costos adicionales

56. En función de las aprobaciones de proyectos similares en la 28ª Reunión, la Secretaría dio al Banco Mundial la razón para el ajuste de costos de diversas categorías del presupuesto, tales como artículos de medición, herramientas para maquinado, accesorios exclusivos, equipos de prueba y producción de pruebas. Los presupuestos de los proyectos individuales han sido revisados en consecuencia.

Nivel total de financiamiento admisible

57. Tomando en consideración todo lo anterior, y siempre y cuando se dé flexibilidad al Gobierno de China y que los recursos sean utilizados con la mejor relación de costo-eficacia no necesariamente implicando la conversión de las cinco empresas en cuestión, el Banco Mundial y la Secretaría convinieron en EUA \$5,250,852 como nivel total financiamiento admisible. Los costos de apoyo del organismo se calculan en EUA \$587,594.

58. La aprobación de los cinco proyectos últimos llevará a una eliminación permanente y sostenible en el subsector de refrigeración comercial.

RECOMENDACIONES

59. La Secretaría recomienda la aprobación de la asignación de EUA \$5,250,852 y los costos de apoyo al organismo de EUA \$587,594 destinados al Banco Mundial, para la puesta en ejecución de los cinco proyectos restantes en el subsector de refrigeración comercial e industrial en China, con la salvedad que, coherente con el avance normal y los procedimientos de información al terminarse, el Banco Mundial indique claramente las actividades reales que se han ejecutado y los gastos incurridos.

DESCRIPCIÓN DEL PROYECTO

Programa de ejecución de 2002 del plan sectorial de solventes en China

60. En nombre del Gobierno de China, el PNUD presentó a consideración del Comité Ejecutivo un informe sobre la ejecución del plan sectorial de solventes para la eliminación gradual de SAO en China para el período abril de 2000 a diciembre de 2001, combinado con una solicitud para la aprobación del programa de ejecución anual de 2002 (Anexo III de este documento).

61. El Acuerdo sobre eliminación de SAO en el sector de solventes de China, fue aprobado en la 30ª Reunión del Comité Ejecutivo, en marzo de 2000, a un costo total de EUA \$52 millones. En la misma Reunión el Comité Ejecutivo aprobó el primer plan de ejecución para el período de abril 2000 a diciembre de 2001, junto con el financiamiento de EUA \$6,75 millones (más 10 por ciento de costos de apoyo) para las actividades de 2000.

62. En la 32ª Reunión, el Comité Ejecutivo tomó nota de que el informe provisorio sobre el programa anual de 2000-2001, bajo el plan sectorial de solventes de China, presentado a esa Reunión indicaba que la eliminación proyectada no cumpliría con los objetivos de eliminación estipulados en el Acuerdo.

63. En la 33ª Reunión, el PNUD presentó un informe de avance interino y una solicitud para el segundo pago programado de EUA \$6,955,000 (más 10 por ciento de costos de apoyo) para el programa anual de 2000 a 2001. El informe indicó que se habían tomado medidas correctivas para asegurar que se alcanzaran todos los objetivos de eliminación. En la Decisión 33/46, el Comité Ejecutivo aprobó el financiamiento solicitado, a condición de que, en relación a una enmienda del programa anual relativa al financiamiento para la producción de n-propil bromuro:

- a) el n-propil bromuro producido en China no estará disponible para exportación;
- b) se impondrá una cuota de producción anual de n-propil bromuro para cumplir con los requisitos de usos de solventes únicamente;
- c) China controlaría la venta de n-propil bromuro sólo a las empresas que estén implicadas en los proyectos de conversión, dentro del plan sectorial de solventes en ese país;
- d) la Oficina de Importación y Exportación de China supervisaría y aseguraría que China no exporta n-propil bromuro;
- e) el organismo de ejecución del plan sectorial de solventes de China, el PNUD, incluiría en su plan de auditoría anual la verificación de que no se exporta n-propil bromuro;
- f) No se solicitaría ninguna asistencia financiera adicional del Fondo Multilateral para la conversión final a ninguna alternativa de PAO.

64. En su 35ª Reunión el Comité Ejecutivo consideró y, posteriormente, aprobó el programa de ejecución anual de 2002 (Decisión 35/51).

65. Las Secciones B1 y B2 del informe describen los contratos de eliminación firmados con las empresas, tal como aparece en el programa de ejecución de 2000 a 2001. La Parte F del informe indica las cifras globales de consumo para CFC-113, TCA y CTC para el año 2000, tal como aparece en el Acuerdo de Plan de sector.

66. Se indica que el proyecto propuesto de cooperación bilateral con Japón, que había sido incluido en el Plan de sector, no se realizará. Un proyecto posible de cooperación bilateral con Francia, también presente en el Plan Sectorial, sigue siendo considerado (Sección B3).

67. La Sección B4 indica que China ha cumplido con el requisito del Acuerdo de proscribir la exportación de SAO utilizadas como solvente de limpieza.

68. Una gama de actividades de asistencia técnica, coherentes con las que se prevén en el programa de ejecución, se indican en la Sección C. En particular, se informa en la Sección C5, que no se ha iniciado todavía ninguna actividad ni se ha incurrido en ningún gasto para el desarrollo y producción de HEP-2 con nPB.

69. Los indicadores de resultados para las actividades del primer programa de ejecución, junto con los resultados, aparecen en una tabla del Anexo I del informe.

COMENTARIOS Y RECOMENDACIONES DE LA SECRETARÍA

COMENTARIOS

70. El informe sobre el programa de ejecución de 2000 a 2001 indica que China ha firmado contratos para la reducción de consumo de SAO, por parte de las empresas que igualan o exceden la eliminación total para cada SAO pertinente especificada en el programa de ejecución.

71. En función de las cifras provistas en el informe (Sección F página 9), se lograron los objetivos de consumo de 2000 para CFC-113, TCA y CTC especificados en el programa. Estas cifras no son resultado de las actividades que entran dentro del Plan de sector, que tendrá un impacto en los objetivos de consumo correspondientes a 2001, y por lo tanto, no están sujetas a auditoría por parte del PNUD (que comenzará este año con respecto al consumo de 2001). Las cifras incluyen niveles de producción, importación y exportación para CFC-113, TCA y CTC. La cifra para la producción de CFC-113, 4,371 toneladas métricas, es mayor que el nivel total de producción indicado por el Banco Mundial en su auditoría de producción de CFC en China para 2000, que había sido 4,125 toneladas métricas. Además, el “uso de materias primas” de CFC-113, indicado como 245 toneladas métricas, excede el máximo de uso acordado de CFC-113 como materia prima de 12,5 toneladas métricas (10 toneladas PAO) especificadas en el párrafo “c” del Acuerdo. El PNUD está investigando estas aparentes anomalías.

72. El Acuerdo también establece en el párrafo c) que China preparará anualmente una lista de las cantidades de CFC-113 y CTC compradas por plantas específicas para usar como agentes de proceso eximidos y materias primas. Esta lista no ha sido incluida en el informe. La Secretaría planteó la cuestión al PNUD que va a suministrar la información tal como lo requiere el Acuerdo.

73. El Anexo al informe contiene una tabla con los indicadores de resultados que refleja aquellos que aparecen en el plan de ejecución. La tabla muestra que los diversos indicadores de resultados sean cumplidos.

74. Sujeto a que el PNUD suministre satisfactoriamente la información al Comité Ejecutivo sobre las cuestiones pendientes establecidas anteriormente, el Comité Ejecutivo podría considerar la aprobación de financiamiento de EUA \$6,330,000 más EUA \$633,000 en costos de apoyo al organismo, para el programa de ejecución anual de 2002 correspondiente al sector de solventes en China, aprobado en la Decisión 35/51.

RECOMENDACIÓN

75. Pendiente.

CHINA CFC PRODUCTION PHASEOUT PROGRAM

2001 VERIFICATION REPORT

February 13, 2002

Inspection Team

F.A. Vogelsberg: Mission Leader and primary text preparation – Annex I

Hua Zhangxi: Data Summary Annex II and Annex III.

Wu Ning: Financial Verification of the CFC Production for China in 2001 – Annex IV

Assisted and Accompanied By

Tang Qingyan: State Environment Protection Administration – Beijing (January 28 - February 4)

Feng Liulei: State Environment Protection Administration – Beijing (February 4-8)

Inspection Mission Time Frame

January 27 – February 10, 2002

Plants Covered in Visitation Order

Juhua Fluoro-Chemical Co. Ltd – Zhejiang Province, Quzhou City

Dongyang Chemical Plant – Zhejiang Province, Dongyang City

Linhai Limin Chemical Plant – Zhejiang Province, Linhai City

Guangdong Xiansheng Chemical Co. Ltd – Guangdong Province Zengcheng City

Jiangsu Meilan Electro-Chemical Plant – Jiangsu Province, Taihou City

Jiangsu Changsu* 3F Refrigerant Co. Ltd – Jiangsu Province, Changsu* City

* All World Bank documents spell as Changsu; while the true spelling is Changshu

Report Format and Contents

Summary of verification conclusions for CFC Production in China for year 2001.

Annex I – Complete textual description of the Missions’ Verification efforts for each of the seven Enterprises’ year 2001 Production.

Annex II – China CFC Production Phase out Program 2001 CFC Production Verification Report.

Annex III – China CFC Production Sector Complete Closure Project 2001 Verification Report.

Annex IV – Financial Verification of CFC Production in China in 2001.

Summary: Verification Conclusions with respect to China's CFC Production in 2001

There were seven enterprises producing CFC products in China in 2001. The verified overall national production of CFCs in 2001 is 36,196.1 tons (ODP). The following table is the breakdown in accordance with various types of product.

Type of CFC Product	Number of Producers	Total Production (in tons)	
		ODS	ODP
CFC-11	3	14,098.9	14,098.9
CFC-12	6	19,257.2	19,257.2
CFC-13	1	27.0	27.0
CFC-113	1	3,375.0	2,700.0
CFC-114	1	6.8	6.8
CFC-115	2	177.0	106.2
Overall National			36,196.1

The total consumption of CTC for the production of 14,098.9 tons of CFC-11 product is 17,426.3 tons; and the overall average CTC/ CFC-11 ratio is 1.236. Among the three CFC-11 producers, the producer that had the lowest CTC/ CFC-11 ratio (1.209) is Zhejiang Juhua Fluoro-chemical Co. Ltd.(SRI# B 14); and the highest ratio (1.271) is Jiangsu Meilan Electro-chemical Plant (SRI# A 8) .

The total consumption of HF for the production of 14,098.9 tons of CFC-11 product is 2,228.6 tons; and the overall average HF/ CFC-11 ratio is 0.158. Among the three CFC-11 producers, the producer that had the lowest HF/ CFC-11 ratio (0.156) is Zhejiang Juhua Fluoro-Chemical Co. Ltd. (SRI# B 14); and the highest ratio (0.180) is Jiangsu Meilan Electro-chemical Plant (SRI# A 8).

The total consumption of CTC for the production of 19,256.9 tons of CFC-12 product is 26,586.2 tons; and the overall average CTC/ CFC-12 ratio is 1.380. Among the six CFC-12 producers, the producer that had the lowest CTC/ CFC-12 ratio (1.357) is Zhejiang Dongyang Chemical Plant (SRI# B 12); and the highest (1.411) is Jiangsu Changsu 3 F Refrigerant Co. Ltd. (SRI# A 10)

The total consumption of HF for the production of 19,257.2 tons of CFC-12 product is 7,388.4 tons; and the overall average HF/ CFC-12 ratio is 0.384. Among the six CFC-12 producers, the producer that has the lowest HF/ CFC-12 ratio (0.354) is Zhejiang Juhua Fluoro-chemical Co. Ltd. (SRI # B 14) and the highest (0.418) is Guangdong Xiansheng Chemical Co. Ltd.(SRI# A 13).

A detailed summary of China CFC production in 2000 follows on the next page.

SUMMARY OF CHINA CFC PRODUCTION IN 2001

CFC-11

SRI #	Name of Enterprise	Production (ODS)	Production (ODP)	CTC Cons'ption	HF Cons'ption	Ratio CTC/ CFC-11	Ratio HF/ CFC-11
A 8	Jiangsu Meilan Electro-chemical Plant	1,049.7	1,049.7	1,334.1	189.4	1.271	0.180
A 10	Jiangsu Changsu 3F Refrigerant Co. Ltd.	8,221.9	8,221.9	10,254.0	1,287.1	1.247	0.157
B 14	Zhejiang Juhua Fluoro-chemical Co. Ltd.	4,827.3	4,827.3	5,838.2	752.1	1.209	0.156
	Overall	14,098.9	14,098.9	17,426.3	2,228.6	1.236	0.158

CFC-12

	Overall	177.0	106.2	238.1	93.1	*1.478	0.526

* Zhejiang Chemical Research Institute made use of 23.461 tons of CFC 113a, which is a non-ODS obtained as by-product from their HCFC 123 production unit, as part of raw material for CFC 115 production. This action has been taken into consideration in the calculation of the ratio.

Annex I: Textual Description

Tuesday, January 29 – Zhejiang Juhua (Quhua) Fluoro-Chemistry Co. Ltd.

12,000 TPA CFC-11/CRC-12
10,000 TPA AHF
30,000 TPA Chloromethanes (nominal 14,000 TPA CTC)

Background

The fiscal year 2000 data verification was conducted by Messers Vogelsberg, Hua and Wu from the World Bank and Li Zhuo from SEPA on June 4 & 5, 2001. This was the first of ten Enterprise verifications conducted using the new Ex-Com format, so considerable effort was expended in an attempt to match production plant control log sheet data to reported monthly production. This exercise proved non-productive at several locations, as explained in detail in our June 25, 2001, Mission Report Summary. Therefore, while we will examine plant-operating records to verify they are “real time” records; reconciliation of mass flow rates to reported monthly production will not be attempted.

Current Visit Purpose

Juhua, as one of the seven operating plants in 2001 operating under a quota, is required to present plant data and records for verification of key raw material consumptions and CFC-11 and CRC-12 produced in 2001.

Last years’ verification work established that this Enterprise maintains very detailed and easily verifiable CFC production records and the reader of this report may want to refer to our June 25, 2001, Mission Report for specific details of records created by Juhua. The year 2001 verification, like last year, was conducted in two parts; with Mr. Wu Ning conducting a financial review and the other team members examined production plant daily and monthly records. All individual monthly records for CFC-11 and CFC-12 production (finished product packaged and passed as acceptable by quality control) were verified as accurately reported by the Enterprise to SEPA. A representative number of monthly AHF and CTC transfers into the fluorocarbon plants were verified and found to be accurate as reported to SEPA. A representative number of the plant’s shift log sheets were examined to check on the Enterprise’s reported operating days. We concur that their reported days of operation were correct. We also were satisfied that the shift, daily and monthly records were authentic; and as reported last year all records were done in ink and properly signed by at least two responsible personnel.

Our team is satisfied that Juhua data for CFC-11 and CFC-12 production in 2001 is correct as reported to SEPA.

Juhua produces most of their CTC needs for CFC's but require some outside purchases to meet their current demand. Juhua also sells some CTC to outside customers. The plant's total CTC balance was reconciled.

Juhua produced most of their on site AHF needs, but also purchase some AHF to meet total site needs. AHF is used on site for producing HCFC-22, CFC-11/12 and Aqueous HF. HF also is sent to commodity storage for sale to outside customers. Juhua's AHF balance was reconciled.

Reconciliation of the above CTC and AHF transactions took an inordinate amount of time and Juhua has been asked to provide clearer records for next year's verification.

For future notice, when the plant is closed permanently it is important to recognize that the way Juhua reports CFC production; i.e., material that is packaged and passed quality control tests, results in a large in process stock of about 700 tonnes. At final shutdown this quantity must be declared as production within their final year.

Wednesday, January 30 – Zhejiang Dongyang Chemical Plant

5,000 TPA CFC-12

8,000 TPA HCFC-22

20,000 TPA AHF

Background

Our verification team last visited this site June 6, 2001, for verification of year 2000 CFC-12 production, sales and raw materials consumption.

Verification Results

As at Juhua, we split into two teams; Mr. Wu Ning examined financial records to verify raw material purchases and use as well as sales of CFC-12. Messrs Vogelsberg, Hua and Madam Tang (SEPA) examined CFC-12 plant operating records and product cylinder filling records.

All CFC cylinder filling record sheets were totaled for each operating month and verified against their official production reported to SEPA. All monthly records were accurate with the exceptions of a 50kg error (overage) in September. This small amount did not cause the Enterprise to exceed their 2001 quota to produce CFC-12. During verification of the CFC-12 cylinder record it was apparent that in 2001 they started filling several thousand 13.6kg DAC's or disposable pressure tanks, which are being exported under an export permit from SEPA.

Zhejiang Dongyang kept a daily and monthly plant log sheet showing estimated AHF and CTC fed to each of their two CFC-12 reactors. One log sheet covers a full month of daily totals from each shift as well as a monthly cumulative figure. We compared all of these figures for CTC and AHF

and found them to deviate less than 1% from official reported AHF and CTC used in each fiscal month.

All AHF is transferred to the CFC-12 plant via weigh tank that always contains exactly 1320kg making reconciliation of AHF use very easy and exact. CTC is transferred from the warehouse bulk storage and billed to the CFC-12 plant based on the tank level changes.

By examining their plant shift logs we verified their reported number of operating days as very precise.

Our team is very comfortable with its summarized results for Zhejiang Dongyang.

Thursday-Friday January 31-February 1 – Zhejiang Linhai Limin Chemical Plant

3,000 TPA CFC-12 (2 Reactors; only one operating)

100 TPA CFC-13

10,000 TPA HCFC-22 (max 13,000 TPA if standby CFC-12 reactor is utilized for HCFC-22)

Background

Last year's verification was conducted June 7, 2001. We described in detail the excellent set of records maintained by Limin in our June 25, 2001 Mission Report. The reader of this report may refer to June's report if there is a need to revisit the forms and records used by Limin.

Verification Results for CFC-12

CFC-12 cylinder filling records for every day of each operating month were reconciled against the plant's official reported production and found to be correct for all months. The above covered total 2001 CFC-12 production for sales as well as for conversion to CFC-13. CFC-12 transferred to the CFC-13 plant was verified as accurate vs figures reported to SEPA. It is worth noting that the CFC-13 plant 27 tonne quota was approved by the Government to use 72.9 tonnes of CFC-12. However, due to operating problems they consumed 74 Tonnes. The 1.9 tonnes overage was purchased from an outside source since the plant's CFC-12 year 2001 quota was already committed to outside sales, at higher prices than which they could be purchased.

AHF is purchased in cylinders for the site's CFC-12 and other production units. Cylinder weights are the basis of consumption in the various plants. Prior to March it was difficult to reconcile specific use for CFC-12 and for other uses. Starting in March all AHF quantities were identified as to which plant they were used in making reconciliation for the balance of the year very easy. Reported AHF use for CFC-12 agreed with figures reported to SEPA from March through year-end 2001.

CTC is purchased primarily in bulk, and CFC-12 plant consumption is based on CTC feed tank level changes. The CTC transfers for the entire year were verified for all operating months and found to have been accurately reported.

We are very satisfied that Limin's CFC-12 production and AHF plus CTC consumptions have been accurately reported.

We checked three months of operating log sheets to verify their reported number of operating days. Examination of three months would indicate that actual operation was approximately 15 days less than reported since they do not count a day as lost unless there is one full 8- hour shift of outage.

Verification for CFC-13

Limin typically fills 35kg cylinders of CFC-13. All cylinder-filling records for the eleven months of operation were checked and each month's production was correctly reported. While they operated 282 days in 2001 they only filled cylinders on 106 days.

We raised concern about their very poor yield of CFC-13 from feedstock CFC-12 in January and February of 2001. In 39 operating days of Jan/Feb they consumed 6.306 tonnes of CFC-12 feedstock, yet recovered only 1.295 tonnes of CFC-13, 1.04 tonnes or 45% less than the 2.33 tonnes that should have been produced at their normal CFC-12/CFC-13 ratio of 2.7. Three possible reasons for the high ratio of CFC-12 are:

- CFC-12 feedstock was sold as CFC-12 product
- CFC-12 was vented from the system as unconverted feedstock
- High by product FC-14 production, which carries CFC-13 to the atmosphere where it is vented.

According to plant supervision causes of the poor yield were as follows:

- During the year-end maintenance shutdown in 2000 an oil less (non-lubricated) compressor was installed and it worked poorly allowing higher than normal CFC-13 losses in the refrigerated condenser vent stream. The person pushing the use of the non-lubricated compressor was reluctant to give up the experiment.
- They had catalyst problems that caused poor CFC-12 conversion so they generated a significant quantity of contaminated CFC-12 (containing some CFC-13) that was stored and slowly fed into the system in later months.
- The combination of their poor new compressor (did not provide the high pressure necessary to reduce CFC-13 losses in the refrigerated vent condenser) and excess FC-14 by-product caused poor yield until the compressor was changed in late February.

Yields improved by March so that the yearly yields were near normal. The above problem caused loss of production in January and February so they had to operate more days in the remainder of the year to make their 27 tonne quota since they had customers for every kg of product.

We verified each month's transfer of feedstock CFC-12 to the CFC-13 to the plant; the totals for each month were correct. We questioned why some transfer slips in about six cases were lump sum figures and did not show what cylinders were in the transfer. They produced a bound record book that showed the specific cylinder quantities, thereby removing our concern.

We were satisfied that the year 2001 CFC-13 production and CFC-12 feedstock consumed are valid as reported.

Saturday February 2 – Zhejiang Chemical Research Institute

150 TPA CFC-114/115

Background

Our year 2000 production data verification was conducted June 8, 2001. Our June 25, 2001 Mission Report provides considerable detail of the records generated and maintained by Zhejiang Chemical Research and this detail will not be repeated in our current report unless exceptions are noted.

Year 2001 Production Verification Results

There are three issues in Zhejiang's 2001 data report that need addressing.

The first concerns appearance of CFC-113a as part of the CFC-113 feedstock for conversion to CFC-114 and CFC-115. By M.P. definition CFC-113a isomer is not an ODS, hence, not controlled, (it is a solid below 15° C hence, not able to reach the upper atmosphere, hence not controlled). The China CFC-113 solvent sector plan calls for conversion of China's solvent using industries to non-ODS processes by year- end 2005.

Zhejiang produces HCFC-123 by reacting chlorine with HCFC-133a and this process creates some unavoidable by-product CFC-113a. In 2001 most of the by-product CFC-113a was used to manufacture a non-ODS pesticide. However, Zhejiang being aware that their source of feedstock CFC-113 could disappear in the 2006 to 2009 time frame, decided to determine if quality CFC-115 could be produced from CFC-113a. Since CFC-115 has no isomers this was a logical route and they started using some CFC-113a in producing their 2001 quota of CFC-115.

A second concern involved Zhejiang's report to SEPA of 2001 data showing 0.033 tonnes of CFC-114 as an intermediate to be used for future CFC-115 manufacture. This is not allowed and the 0.033 tonnes must be counted as part of their 2001 CFC-114 production. Therefore, their 2001 production of CFC-114 must be restated as 6.833 tonnes vs their quota of 6.8 tonnes. The overage of

0.033 tonnes turns out to negligible since figures are rounded to one decimal in the reports. However, were it 50kg it would have rounded up to 0.1 tonne and been a non-compliance issue. This is another case where Enterprises are operating too close to their quota and risking non-compliance (Zhejiang Dongyang had a 50 kg overage error in September).

The third concern involves disclosure in Zhejiang's 2001 report that they used 51.750 tonnes of CFC-113 over five-month period (Jan-May) to produce other Non-CFC products. Examination of records in their downtown financial headquarters documented that 51.750 tonnes went to a pilot plant at the Research Center to produce trifluoroacetic acid (TFA) a non-ODS pharmaceutical intermediate. In February, 500 kg went into producing pyrethrin (a pesticide intermediate). To make this intermediate they isomerize CFC-113 to CFC-113a since the "a" isomer with the three fluorine atoms on one carbon is the biologically active molecule. We concur that this activity is allowed under the feedstock provision of the MP.

The cylinder filling master record sheets for each month of CFC-115 and CFC-114 production were checked against the warehouse transfer receipts and compared to their official monthly production data. An insignificant error of 3kg in over reported production of CFC-115 was noted in June. We were satisfied that their 2001 CFC-115 production was correct as reported to SEPA and in a previous text we noted the small exception of 33 kg in CFC-114 production.

In examining CFC-115 cylinder filling records we suspected that the filling log sheet listing cylinder number, tare weight and gross weight is most likely created from some source not provided to us (we believe this because the full page of entries representing as much as full month's cylinder filling is too neat and clean and always filled in with identical handwriting). The supervisor of filling confirmed that he receives a slip of paper documenting each cylinder filling, which he accumulates in a file and transfers to a monthly report at month end. The accumulated slips are discarded at month end. The supervisor of filling showed us some original resent slips and promised that, in the future these will be saved for examination.

All AHF, CFC-113 and CFC-113a transfer receipts were checked for each month and found in agreement with reported official consumptions.

Since their CFC-114/115 reaction system contains four reactors, grouped two reactors to a set, it is necessary to look at two log sheet sets to understand operation for a specific month. Examination of these sheets prove conclusively that they are "real time" logs and we are satisfied that reported operation days are correct. For the reasons mentioned in our June 25,2001 report no attempt was made to reconcile log sheet raw material flows to actual finished product production.

As in all other verifications exercises we split into two teams, Mr. Wu Ning handling the financial data and the three other team members examining production plant records. All four team members are comfortable with the 2001 data report for Zhejiang Chemical Research Institute.

Sunday February 3 – Guangdong Xiansheng Chemical Co. Ltd

3,000 TPA CFC-12

Background

Our year 2000 data verification was conducted June 10, 2001. During last years record examination we suggested that they could and should improve some of their procedures and paperwork so future verification teams would be more satisfied that Guangdong Xiansheng's records were credible.

Verification of Year 2001 Data

We examined 2001 production records that were comparable to the prior year's verification and were pleased to learn that they had heeded our prior concerns and improved procedures in several areas:

- In late 2001 they stenciled numbers on all of their CFC-12 cylinders, and noted same on their filling log sheets.
- The filling log sheets are now signed in ink by two different people
- All receipts for raw materials are signed by the delivery and receiving persons.
- Sale quantities are tracked by paper work that has the full name of the purchasing party.

They also responded to our prior concern that their CTC to CFC-12 ratio was quite high and as such could raise concerns in future verifications. They checked the soil adjacent to their three large bulk CTC tanks and found significant CTC levels in the soil. They found three leaks in two tanks and repaired in July 2001. They also replaced a bad condenser that was venting excessive CTC vapor.

Their 2002 CTC/CFC-12 ratio improved to 1.371 from 1.402 in 2001.

All CTC and AHF consumption figures for each month were verified as accurate but required some adjustment to add AHF and CTC reported loss figures to their consumption figures. They understood why such losses could not be excluded from total consumption figures.

CFC-12 monthly filling logs were verified as accurate for all nine months of operation in 2001.

A representative number of reactor operating log sheets were examined to verify hourly weigh tank readings for CTC and AHF fed to each of their two CFC-12 reactors. There was perfect

agreement of log sheet data for monthly total (raw material usage of CTC and AHF). This exercise also allowed verification of reported operating days in 2001.

Both financial record verification and our plant record's verification went well and our team is fully satisfied that Guangdong Xiansheng's data reported to SEPA for 2001 is correct.

Tuesday February 5- Jiangsu Meilan Electro-Chemical Co. Ltd.

3,000 TPA CFC-11

3,000 TPA CFC-12

20,000 TPA HCFC-22

16,000 TPA AHF (expanded from 6000 to 10,000 in 2001)

30,000 TPA chloromethane (new methanol based plant started in 2001)

Background

Our year 2000 data verification was conducted June 14, 2001. This Enterprise had the best set of records of all seen in our June 2001 mission making verification very easy.

Verification of Year 2001 Data

Their new Chloromethane plant started up in 2001 so they now have three sources of CTC:

- Purchased drums
- Purchased bulk delivered in 50MT quantities and
- Pipe line transfers from their chloromethane plant starting in April 2001

In addition the CTC large bulk tank used by the warehouse developed a leak and was removed from service. The fluorocarbon production plant has two bulk CTC storage tanks, one has now been taken over by the warehouse to receive material from the above three CTC sources. As in the past all transfers to production are via a 6.67MT tank into the Production controlled bulk CTC tank. The fluorocarbon plant's use of CTC for the CFC-11 and CFC-12 plants are via shift weigh tanks. In verifying CTC use it became apparent that while all transfers to production are via the 6.67MT warehouse controlled tank that there is a "paper transaction" at the beginning and end of each month where unused CTC is transferred back from production to the warehouse. This transaction is reversed at the start of the next production month.

They confirmed that they are operating their new chloromethane plant to minimize CTC production hence they will continue CTC purchases until CFC production falls below on site CTC production.

All CFC-11 records pertaining to CFC-11 drums filled, AHF and CTC fed to the reactor were examined and found to be correct and support the reported values. Reported plant operating days were verified as correct.

All CFC-12 records pertaining to CFC-12 cylinders filled, cylinders transferred to the warehouse, plus AHF and CTC consumed were examined and found to support reported figures for CFC-12. CFC-12 plant reported operating days were found to be correct.

We questioned the poorer ratios for CTC/CFC in June and December and were told that there were several mechanical problems in these months.

The verification team was fully satisfied that the Jiangsu Meilan production and consumption figures reported to SEPA for the year 2001 are correct.

We also met the CFC production inspectors authorized by SEPA, who are resident at Meilan from Dongyang and Changsu 3F any time Meilan is operating any of their CFC production facilities. This accommodation by the seven operating Enterprises provides another level of assurance that each Enterprise is honestly reporting CFC production data.

Meilan export both CFC-11 and CFC-12. All exported CFC-12 is in returnable cylinders.

Thursday February 7 – Jiangsu Changsu 3F Refrigerant Co Ltd.

10,000 TPA CFC-11
5,000 TPA CFC-12
4,000 TPA CFC-113
400 TPA CFC-115

Background

We last visited Changsu 3F June 15 and 16, 2001 for verification of year 2000 CFC production and raw materials consumption data. Our June 25, 2001 Mission Report described in detail the excellent records system used by 3F and also noted that some original records generated and subsequently transferred to monthly reports are discarded. We requested that all original records be retained for future verification.

Verification Results for Year 2001 CFC Production

As in previous verification efforts Mr. Wu Ning conducted a financial review while Messrs Vogelsberg, Hua and Feng (SEPA) verified plant production records for 2001. The compilation of records generated by 3F were described in detail in our June 25, 2001 Mission Report which should be consulted by those interested in this detail; as it will not be repeated in our current report.

CFC-113

As mentioned in our June 25, 2001 Mission Report in process inventory adjustments each month caused confusion in our year 2000 data review. After our June 2001 visit they changed this procedure. However, for 2001, data it was still necessary to check these adjustment figures through May. 3F also lumped their November and December CFC-113 data together since there were only four days in fiscal December (November 27, 28, 29 & 30). The report has been adjusted to correct this.

The total CFC-113 production by 3F in 2001 is correct as reported at 4194.4MT; 819.4 MT of which were used as raw materials for chemical conversion in these applications

- Production of CFC-115 by 3F
- Production of non-CFC products within the Enterprise
- Production of CFC-114/15 by Zhejiang Chemical (SR1# B-11)
- Production of Zhejiang Chemical (SR1# B-11) other non-CFC products

All of the above mentioned applications have been verified. Therefore, the team concludes that the total CFC-113 production under quota control is 3375MT as ODS or 2700MT expressed as ODP tonnes. 3F's CFC-113 operating days as reported appear to be correct.

AHF and PCE use figures prior to June were accumulated for the month and a monthly use receipt issued; with the original daily records discarded. From June onward daily use figures were recorded in a bound notebook that has been saved for verification.

AHF plus PCE reported monthly use figures were verified as correctly reported for CFC-113 production.

CFC-113a was produced from CFC-113 for an agriculture product by isomerization on the 3F site. The activity took place in August through December and consumed 324.4 MT of CFC-113.

CFC-113 was also converted to CTFE polymer in August, September, and November and December, consuming 200.45 MT of CFC-113. In June 1.3MT of CFC-113 was used in a research project to produce a non-ODS refrigerant.

The above three activities consumed their reported 526.1 MT of CFC-113 for non-ODS production; all of which are accepted as correct.

Their CFC-113 data for year 2001 are accepted as correct.

CFC-115

CFC-115 only operated five months, June, July August, October and November in 2001. Since production occurred after our June 2001 visit, they saved the bound notebook detailing CFC-113 and AHF feedstock for CFC-115 production; making verification easy and accurate. CFC-115 production of 50MT was verified as correct.

CFC-113 and AHF consumption figures were verified as correct as reported to SEPA.

3F count any day where some CFC-113 and AHF are fed to the CFC-115 reactors as an operating day. Using this criteria their reported operating days were correctly reported.

CFC-11

While 3F have two CFC-11 reactors they operate only one on occasion. This makes operating days of questionable value since it is a very time consuming exercise to examine every shift for all days in a month. There are some cases where one reactor is down but the 2nd reactor still have feeds on, hence there should be no loss in operating days, but it does mean loss of capability. We checked operating logs for a couple of months and believe that 3F reported operating days tend to be 1-1/2 days greater than actual. Our criteria deducts time when AHF or CTC feeds were off. 3F counts any shift with feed flows for one hour an operating shift. All eleven months CFC-11 production transfer slips were examined and verify their reported production. During this exercise we noted four months where product was returned from the warehouse to Production due to potential leakage of non-standard containers; (10MT in April, 0.81MT in June, 3MT in September and 0.25MT in October). We delved in to the 10MT in April and determined that they were attempting to reuse CTC drums for CFC-11 and noticed very small leaks in a few so they rejected the entire 40 drum (10MT) quantity and discontinued the reuse practice. There is no formal transfer slip documenting the return of the above ~13.5MT so we accept on good faith that it occurred. However, we suggested that any future returns be well described and documented to improve the credibility of their production figures. We also stressed that any significant leakage can not be claimed as a credit since any loss of finished product to the atmosphere must be counted as an ODS release, hence production. Considering that 3F report 8,221.9MT of CFC-11 production against their 8,222MT quota makes the above issue in the future a potential non-compliance issue.

CTC and AHF consumptions were validated against their reported amounts and found to be correct.

We are satisfied that 3F's CFC-11 reported production and raw material consumptions for 2001 are correct as reported.

CFC-12

CFC-12 is produced in 3 reactors. Two respective months were examined to determine if 3F's operating days seemed reasonable as reported. While there are outages on individual reactors the only time all three were down was when there was a plant wide electrical outage. For the two months examined in detail we concur that their reported operating days are realistic.

All CFC-12 cylinder transfer slips from production to the warehouse were checked for all eleven operating months and found to be accurate. This exercise raised two issues that were resolved satisfactorily;

- One local customer uses their own cylinders and usually returns them with a measurable CFC-12 "heel". 3F "credit" them with the "heel" and deduct the "heel" quantity from the monthly production in the month the cylinders are filled. This totaled about 2MT for the year; and is considered a perfectly legitimate practice.
- On two occasions 17MT and 19.25MT of CFC-12 in cylinders were returned from the warehouse to production so they would have sufficient product to fill large orders for 13.6kg DAC's. "Heels" in the returned cylinders, after discharging the contents to the production bulk tank, were included in the "tare" weight at the next filling. This is an acceptable practice.

We suggest they keep better paper records of these transactions in the future.

All CTC and AHF monthly figures were verified as correctly reported.

CTC transfers are large quantity bulk 8-10 times per month for use in both CFC-11 and CFC-12. Records of individual transfers are kept in a bound notebook. A representative number of transfer and month were checked and we are satisfied in their accuracy.

All AHF is received in cylinders making reconciliation of all monthly data impractical since these are typically about 170 transactions per month. After verification of one month's data vs total monthly consumption are accepted monthly reported figures as accurate.

CFC-12 cylinders are filled on every shift and each shift creates a filling log slip, showing each cylinder serial number, tare, gross and net weight. At the end of each day these figures are totaled for each cylinder size and the weights listed on a daily production transfer to warehouse slip. We reconciled a few days and were satisfied that these transactions were properly documented.

Reconciliation of a full month or year's cylinder filling is not practical since up to one thousand small service cylinders and DAC's can be filled in one month.

3F vent returned cylinders into a recovery system. Prior to 2001 the recovered product was not included in the monthly production or annual quota. This is an acceptable industry practice. However, SEPA has not yet approved continuing this practice starting in 2001 so 3F has accumulated about 6MT of CFC-12 in specially identified cylinders waiting SEPA's decision on how they want such material handled.

The overall 3F verification went well, and as stated in our June 25, 2001 Mission Report 3F keep some of the best records in the industry. We are fully satisfied that 3 F's reported CFC's production report for 2001 are correct.

General Comment From Overall Verification

Four companies started exporting DAC's of CFC-12 in the year 2001; Jiangsu Meilan, Juhua, Dongyang and 3F (respective quantities were: 193.8MT, 905.3MT, 746.6MT and 846.5MT). The total of 2,692MT represents about 200 thousand DAC's into the Global Market creating a significant potential for illegal trade once the product leaves China's control.

Annex II: CFC Production Phase Out Verification (Including Gradual Closure)
January- February 2002
(A8 Jiangsu Meilan)

A. Plant identification

Name of Enterprise : Jiangsu Meilan Electro-chemical Plant
 Plant Ref. Number :
 Sector Plan # : 1
 SRI # : A8
 Address of the Plant : No. 460 Yangzhou Lu, Taizhou City, Jiangsu Province,
 PC 225300
 Contact person(s) and Functional Title : Mr. Zhang Futing, Vice General Manager
 Telephone Number : 0523-6336490
 Fax Number : 0523-6341488
 E-mail Address : mldh.tz@public.tz.js.cn

B/ Verification

Team Composition : 3
Leader : 1
 Name : F.A. Vogelsberg
 Functional Title : Consultant, The World Bank
Member(s) : 2
 Name : Wu Ning/ Hua Zhangxi
 Functional Title : Financial Analyst/ Technical Consultant, the World Bank
 Date of Plant Visit : February 4-5
 Duration of Visit : 1.5 day

* Operating days of a month is recorded from the 26th day of the previous month to 25th day of the month. This is the reason for 31 op'tings days in June and September.

** Production I refers to the CFC-113 product that is not to be chemically converted. That is, to be used as ODS.

Production II refers to the CFC-113 product that is to be chemically converted to CFC-115 within the Enterprise.

Production III refers to the CFC-113 product that is to be chemically converted to CFC-114/115 and other non-CFC products by Zhejiang Chemical Industry Institute (SRI # 11).

Production IV refers to the CFC-113 product that is to be chemically converted to non-CFC products within the Enterprise.

Production V refers to overall production of CFC-113. It is equal to I + II + III + IV.

CFC Production Phase Out Verification (Including Gradual Closure)

January- February 2002
(A 13 Guangdong Xiansheng)

A. Plant identification

Name of Enterprise : Guangdong Zengcheng Xiangsheng Chemical Co. Ltd.
Plant Ref. No.
Sector Plan # : 36
SRI # : A 13
Address of the Plant : Zhuchun Farm, P.C. 511370, Zengcheng City, Guangdong Province
Contact person(s) and Functional Title : Mr. Ouyang Shiming, General Manager
Telephone Number : 020-82854060
Fax Number : 020-82852815
E-mail Address :

B. Verification

Team Composition : 3
Leader : 1
Name : F.A. Vogelsberg
Functional Title : Consultant, The World Bank
Member(s) : 2
Name : Wu Ning/ Hua Zhangxi
Functional Title : Financial Analyst/ Technical Consultant, The World Bank
Date of Plant Visit : February 3, 2002
Duration of Visit : 1 day

C. Plant History

Date of Construction	1994						
ODS Products	No. of Lines	Capacity in Baseline Year	Production**				
			Baseline Year	Year 1 1998	Year 2 1999	Year 3 2000	Year 4 2001
CFC 11							
CFC 12	1	3,000	1,100	1,834	1,601	1,098	1,099.4
CFC 113							
CFC 114/115							

Raw Materials Production**							
HF							
CTC							

*The year from which data is used for approving the ODS production phase out project.

**Till the year prior to the verification.

***This applies to plants where production of either HF or CTC or both is integrated.

D. Plant Activity in the Year Verified

1. Plant for Complete Closure

No. of CFC-11/12 lines closed	:	N A
Date of CFC production ceased	:	N A
Date of dismantling completed	:	N A
Verification of destruction of key components by	:	[Name of certifying body] N A
Reactor tank(s) dismantled and destroyed	:	N A
Control and monitoring equipment dismantled and destroyed	:	N A
Pipes dismantled and destroyed	:	N A
Utilities dismantled and destroyed	:	N A
Evidence of destruction (photos or videos)	:	N A
Chance of resuming production	:	N A
Assessment by the verification team to be included in the verification report	:	N A

2. **Plant for gradual closure**

Annual CFC-11/12 quotas, production, sales and stocks since the baseline year*

<u>CFC Products: CFC-12</u>	Baseline Year*	Year 1 1998	Year 2 1999	Year 3 2000	Year 4** 2001
Quota			1,603	1,100	1,100
Opening Stock at beginning of year	0	0	20	0	169.3
Production	1,100	1,834	1,601	1,098	1,099.4
Sales	1,100	1,814	1,621	928.7	878.2
Closing stock at end of year	0	20	0	169.3	390.5

*The year from which data is used to approve the ODS production phase out project.

**Till the year of the verification

Annual HF/CFC and CTC/CFC ratios

Ratio	Baseline 1997	Year 1 1998	Year 2 1999	Year 3 2000	Year 4 2001	Year 5	Year 6*

CFC Production Phase Out Verification (Including Gradual Closure)

January- February 2002
(B 8 Zhejiang Linhai Limin)

A. Plant identification

Name of Enterprise : Zhejiang Linhai Limin Chemical Plant

Plant Ref. Number :

Sector Plan # : 22

SRI # : B8

Address of the Plant : Zhenxing Jie, P.C.317000, Linhai City, Zhejiang Province

Contact person(s) and Functional Title : Mr. He Geping, Vice General Manager

Telephone Number : 0576-5177088

Fax Number : 0576-5178055

E-mail Address : IHLM@mail.tzptl.zj.cn

B. Verification

Team Composition : 3

Leader : 1

Name : F.A. Vogelsberg

Functional Title : Consultant, The World Bank

Member(s) : 2

Name : Wu Ning/ Hua Zhangxi

Functional Title : Financial Analyst/ Technical Consultant, The World Bank

Date of Plant Visit : January 31 – February 1, 2001

Duration of Visit : 1.5 day

C. Plant History

Date of Construction	1983						
ODS Products	No. of Lines	Capacity in Baseline Year	Production**				
			Baseline Year	Year 1 1998	Year 2 1999	Year 3 2000	Year 4 2001
CFC 11							
CFC 12	2	3,000	1,365	1,658	1,188	1,364.7	1,364.9
CFC 13	1	50	27	26	27	27	27
CFC 114/115							

Raw Materials Production**							
CTC	No						
HF	No						

*The year from which data is used for approving the ODS production phase out project.

**Till the year prior to the verification.

***This applies to plants where production of either HF or CTC or both is integrated.

D. Plant Activity in the Year Verified

1. Plant for Complete Closure

No. of CFC-11/12 lines closed	:	N.A.
Date of CFC production ceased	:	N.A.
Date of dismantling completed	:	N.A.
Verification of destruction of key components by	:	[Name of certifying body] N.A.
Reactor tank(s) dismantled and destroyed	:	N.A.
Control and monitoring equipment dismantled and destroyed	:	N.A.
Pipes dismantled and destroyed	:	N.A.
Utilities dismantled and destroyed	:	N.A.
Evidence of destruction (photos or videos)	:	N.A.
Chance of resuming production	:	N.A.
Assessment by the verification team to be included in the verification report	:	N.A.

2. **Plant for gradual closure**

Annual CFC-12/13 quotas, production, sales and stocks since the baseline year*

<u>CFC Products (CFC-12)</u>	Baseline Year*	Year 1 1998	Year 2 1999	Year 3 2000	Year 4 2001
Quota			1,189	1,365	1,365
Opening Stock at beginning of year	125	125	151	126	143.3
Production	1,365	1,658	1,188	1,364.7	1,364.9
Sales	1,365	1,632	1,213	1,347.4	1,338.5***
Closing stock at end of year	125	151	126	143.3	169.7

<u>CFC Products (CFC-13)</u>	Baseline Year*	Year 1 1998	Year 2 1999	Year 3 2000	Year 4 2001
Quota			27	27	27

Opening Stock at beginning of year	0.91	7.91	7.34	2.6	7.9
Production	27.00	26.40	26.95	27	27
Sales	20.00	26.97	31.72	21.7	29.8
Closing stock at end of year	7.91	7.34	2.57	7.9	5.1

*The year from which data is used to approve the ODS production phase out project.

**Till the year of the verification

*** Financially, the total CFC-12 sales is 1343.33; however, the enterprise has purchased in 4.854 tons and sold to the client. therefore, the net sales become 1,338.5.

Annual HF/CFC and CTC/CFC ratios

Ratio	Baseline 1997	Year 1 1998	Year 2 1999	Year 3 2000	Year 4 2001	Year 5	Year 6*
CFC-12	1,365	1,658	1,188	1,364.7	1,364.9		
HF/CFC-12	0.418	0.408	0.408	0.415	0.417		
CTC/CFC-12	1.339	1.346	1.343	1.373	1.370		
CFC-13	27.00	26.40	26.95	27.0	27		
HF/CFC-13	0.888	1.098	1.073	1.122**	1.155		
CTC/CFC-13	2.843	3.623	3.360	3.713***	3.796		

* Till the year of the verification

** Obtained indirectly by (ratio CFC-12/CFC-13) × (ratio HF/ CFC-12)

*** Obtained indirectly by (ratio CFC-12/CFC-13) × (ratio CTC/ CFC-12)

Operational days per year

Type of Production	Baseline 1997	Year 1 1998	Year 2 1999	Year 3 2000	Year 4	Year 5	Year 6*

		277	26.995	74.796	2.771		74.796	-	

*The Plant produces CFC-13 by disproportioning of CFC-12. CTC and HF are used indirectly, and described in previous sheets (the CFC-12 Prouction and CTC/HF Consumption).

** Operating days of a month is recorded from the 26th day of the previous month to 25th day of the month. This is the reason for 31 operating days appeared in April and June.

In case there is one (or more) shift that has reactor operation within a clender day, this clender day is considered as one operating day.

*** The CFC-12/CFC-13 ratio in Jan and Feb were extremely higher than normal practice. The reasons have been assessed and identified as due to abnormal performance of the catalyst purchased which caused the convesion of of CFC-12 partly to carbon tetra fluoride; and the abnormal of a new installed compressor which caused the lower recovery of CFC-13 product. The problems were fixed since late Feb. During the mentioned abnormal period the enterprise has changed the reactor inventory many times; and the reactionmixtu mixture that containing containminated CFC-12 was stored and used graduatly in the production after March. Therefore the ratio after March was lower and th yearly average approached 2.771 that is a little higher than that in 2000.

Consequently, the total consumption of CFC-12 for production of CFC-13 in 2001 is 1.896 ton higher than 72.9 tons that was approved by the Chinese government. The enterprise made up this gap by purchasing such amount of CFC-12 from outside as ODS.

CFC Production Phase Out Verification (Including Gradual Closure)

January- February 2001

(B 11 Zhejiang Chemical Institute)

A. Plant identification

Plant Ref. Number :
Sector Plan # : 10
SRI # : B11
Address of the Plant : No. 926, Xixi Lu, P.C. 310023, Hangzhou City, Zhejiang Province

* The operating day are recorded from the 26th of previous month to the 25th of the month. This he reason for 31 days in June.

CFC-114 was co-produced by the same production line for 3 days in April and 5 days in May.

CFC 114 production uses the same production unit as the CFC 115. It carried out during three days in April and five days in May.

** CFC-113a, a non -ODS, was a by product from the production of HCFC-123 in the Enterprise.It has been used as part of the raw material for CFC 115 in 2001.

*** Here refers to the ratio of the sum of CFC-113 and CFC-113a consumed to the production of CFC-115.

**** In February, 0.5 ton was used for the production of pyrethrin (a pesticide) and 4 tons for TFA (trifluoro acetic acid). In other months, all were used forTFA.

Monthly CFC Production and Raw Material Consumption

CFC-114/CFC-115 Production (expressed in ODS) and HF Consumption

Month	CFC-114 /CFC-115	No. Of Operating days*	CFC-114 Production	CFC-115 Production	HF Consumption for CFC-114	HF Consumption for CFC-115	HF/ CFC-114 Ratio	HF/ CFC-115 Ratio	HF Opening Stock	HF Procured/ Added	HF for Other Uses**	HF Closing Stock***

		249	6.833	126.99	2.820	52.950	0.413	0.417		342.210	295.535	

* The operating day are recorded from the 26th of previous month to the 25th of the month. This he reason for 31 days in June.

CFC 114 production uses the same production unit as the CFC 115. It carried out during three days in April and five days in May.

** Means HF used for other non CFC products within the enterprise..

*** Negative stock figure was caused by delay of financial documentation.

CFC Production Phase Out Verification (Including Gradual Closure)

January- February 2002

(B12 Zhejiang Donyang)

A. Plant identification

Name of Enterprise : Zhejiang Donyang Chemical Plant

Plant Ref. Number :

Sector Plan # : 7

SRI # : B12

Address of the Plant : Wunning Dong Lu, P.C. 322100, Donyang City, Zhejiang Province

Contact person(s) and Functional Title : Mr. Wang Tian'e, Deputy Director

Telephone Number : 0759-6623201

Fax Number : 0759-6632697

E-mail Address : Zjfcc@public.dy.jhptt.zj.cn

B. Verification

Team Composition : 3

Leader : 1

Name : F. A. Vogelsberg

Functional Title : Consultant, The World bank

Member(s) : 2

Name : Wu Ning/ Hua Zhangxi

Functional Title : Financial Analyst/ Technical Consultant, The World Bank

Date of Plant Visit : January 30 2002

Duration of Visit : 1 day

C. Plant History

Date of Construction	1979						
ODS Products	No. of Lines	Capacity in Baseline Year	Production**				
			Baseline Year	Year 1 1998	Year 2 1999	Year 3 2000	Year 4 2001

Annex III. CHINA CFC PRODUCTION SECTOR COMPLETE CLOSURE PROJECT 2001

In accordance with China CFC Production Sector Plan and the Annual Program 2001, three CFC production units in three corresponding China enterprises have been closed. The enterprises are:

A 7	Suzhou Xinye Chemical Co. Ltd.	1 CFC-11 unit
A 11	Jiangsu Changsu Yudong Chemical Plant	1 CFC-113 unit
B 15	Fujian Shaowu Fluoro-Chemical Plant	1 CFC-12 unit

The concerning enterprises reported on their completion of closure. In June of 2001, A World Bank Verification Team, consisting of Messrs. F. A. Vogelsberg, consultant, Hua Zhangxi, consultant, and Wu Ning, financial analyst, conducted verification activities for the total closure of the three CFC production units in the three corresponding enterprises. At the same time, the Team also verified the CFC production of those enterprises in 2000.

Before the Verification Team visited the plant sites, the World Bank provided the Terms of Reference for the task. The Verification Team proceeded with its mission after fully familiarizing itself with the scope of the required work contained in these terms of reference. The concerned enterprises have provided information and evidences with respect to their closure and dismantling activities. The enterprises also provided the information with respect to their production, consumption of raw materials, and sales of the product(s) in 2000. The Verification Team studied and reviewed this information and prepared questions for clarification and data sheets for verification.

At the field sites of the three closed enterprises, the necessary documents needed for the 2000 production verification, such as production logs, sales records, material transfer records were made available to the Verification Team. All evidence of the dismantling and disposal of the equipment mentioned in the Agreement were also made available.

Based upon the inspection and examination of all information as well as the observation on field sites, the Verification Team concluded that **all** the three CFC production units in the three corresponding enterprises have been closed completely. The dismantling and disposal of key equipment meets the requirement specified in the Agreement. All the evidence as well as the remaining plant sites have been reviewed and inspected by the Verification Team. Those three enterprises will not be able to resume CFC production.

For the three closed enterprises, verification of year 2000 production was done as follows:

- Examination of year 2000 starting CFC stock
- Examination of year 2000 CFCs produced and sold
- Examination of year 2000 raw materials consumed
- Examination of year 2000 end CFC stock

So, the Verification Team concluded that the total CFC production of the three closed enterprises in 2000 was 4,235.2 tons (ODP).

CFC Production Phase Out Verification (Including Gradual Closure)

June 2001
(Suzhou Xinye)

A. Plant identification

Name of Enterprise : Suzhou Xinye Chemical Co. Ltd.
Plant Ref. Number :
Sector Plan # : 34
SRI # : A7
Address of the Plant : Caihong Building, Sanxiang Lu, PC 215004
Contact person(s) and Functional Title : Mrs Song Renqi, Manager of Finance dept.
Telephone Number : 0512-8281388
Fax Number : 0512-8281988
E-mail Address : zgsnc@Public1.sz.js.cn

B. Verification

Team Composition : 3
Leader : 1
Name : F.A. Vogelsberg
Functional Title : Consultant, The World Bank
Member(s) : 2
Name : Wu Ning/ Hua Zhangxi
Functional Title : Financial Analyst/ Technical Consultant
Date of Plant Visit : June 18 2001
Duration of Visit : 1 day

C. Plant History

Date of construction: 1993						
ODS Products	No. of Lines	Capacity in Baseline Year*	Production**			
			Baseline Year*	Year 1 1998	Year 2 1999	Year 3 2000

CFC-114/115	-	-	-	-	-	-
Raw Materials Production**						

HF	-	-	-	-	-	-
CTC	-	-	-	-	-	-

*The year from which data is used for approving the ODS production phase out project.

**Till the year prior to the verification.

D. Plant Activity in the Year Verified

1. Plant for Complete Closure

No. of CFC-11/12 lines closed	:	2
Date of CFC production ceased	:	December 26 2000
Date of dismantling completed	:	January 02 2001
Verification of destruction of key components by	:	[Name of certifying body] Suzhou Wuxian EPB
Reactor tank(s) dismantled and destroyed	:	Yes
Control and monitoring equipment dismantled and destroyed	:	Yes
Pipes dismantled and destroyed	:	Yes
Utilities dismantled and destroyed	:	Yes
Evidence of destruction (photos or videos)	:	Yes, available
Chance of resuming production	:	No
Assessment by the verification team to be included in the verification report	:	The closure is complete. All concerning equipment has been dismantled. The evacuated building has been used for other non-ODS chemical production.

2. Plant for gradual closure

Annual CFC-11/12 quotas, production, sales and stocks since the baseline year*

(Please use one table for each CFC product)

<u>CFC Products (CFC-11, CFC-12)</u>	Baseline Year*	Year 1 1998	Year 2 1999	Year 3** 2000
Quota			7,408	2,532
Opening Stock at beginning of year	0	8	912	462
Production	2,532	5,042	7,408	2,532
Sales	2,524	4,138	7,858	1,201
Closing stock at end of year	8	912	462	1,793

*The year from which data is used to approve the ODS production phase out project.

**Till the year of the verification

* Including HF sold as commodity and used for other non-CFC production within the plant.

** The stock at the closing of 1999 is "0". It referred to the stock of the CFC production unit.

In this table, the overall balance of HF of the whole plant is shown; and the stock at the beginning of 2000 becomes 72.8.

*** Negative figure is due to financial recording formality.

Annex IV: Financial Verification of 2001 CFC production in China

From January 28th, 2002 to February 10th, 2002, I joined a mission comprising Messrs. Anthony Vogelsberg (team leader/technical expert) and Hua Zhangxi (HZX, technical expert) to carry out the verification of CFC production in China in 2001 in accordance with the CFC Production Sector 2001 annual programme. The mission was accompanied by the representatives from SEPA, Ms. Tang Qinyuan (from January 28th, 2002 to February 4th, 2000) and Mr. Feng Liulei (from February 4th, 2002 to February 8th, 2002). The mission visited the following plants/companies:

Zhejiang Juhua Fluoro-Chemical Co. Ltd. (CFC 11, CFC 12),
 Zhejiang Dongyang Chemical Plant (CFC 12),
 Zhejiang Linhai Limin Chemical Plant (CFC 12, CFC 13),
 Zhejiang Chemical Industry Research Institute (CFC 114, CFC 115),
 Guangdong Zengcheng Xiangsheng Co.Ltd. (CFC 11),
 Jiangsu Meilan Electro-Chemical Plant. (CFC 11, CFC 12), and
 Jiangsu Changsu Ref. Plant–Changsu 3F (CFC11, CFC12, CFC113 & CFC115).

Based on the experience gained from the previous verification in 2001, the mission also split into technical group and financial group to hold discussions with each CFC production plant/company in parallel during the visit. I took the lead in financial discussions with each plant/company. Therefore, this report only covers the financial discussions with and financial verification of each CFC production plant/company, which follows the Guidelines and Standard Format for Verification of ODS Production Phase-out¹ (Guidelines).

In addition to the Guidelines, the financial verification was done under the following assumptions due to the tight schedule of the mission agreed by Ms. Helen Chan, Task Team Leader, EASES, the World Bank:

The plants/companies understood the importance of this verification, and
 The plants/companies provided completed materials and information needed for this verification.

¹ UNDP/Ozl.Pro/Excom/32/33 of October 24, 2000, adopted as Decision 32/70 at the 32nd Excom Meeting.

Unlike the verification in 2001, this verification exercise was conducted ahead of the annual national (CNAO) audit of the CFC production sector. The mission has no CNAO's documentation and reporting as reference to follow. Therefore, I checked all necessary financial records and the original documents covering the following aspects:

Production of each CFC,
Procurement and production of raw materials for CFC (CTC, AHF and PCE)², and
Consumption of raw materials (CTC, AHF and PCE).

Before the visit of the mission, each plant/company filled in questionnaires and submitted them to HZX through SEPA. Necessary clarifications were requested by HZX and feedbacks were given by relevant plants/companies.

The findings of my discussion were summarized as follows:

Production of CFC

I checked the financial records of CFC production in each plant/company. The financial records were made from the Product Receipt Sheets which were prepared throughout the month. The Product Receipt Sheet is a general name of the document of product acceptance by the warehouse of the plants/companies. Different plants/companies have different names for this kind of sheet. These sheets contained the names and the quantities of CFC products and they were confirmed by the signatures of statisticians from CFC production facilities and warehouse keepers. The financial records of CFC production were made on the last day of each month based on the Product Receipt Sheets provided by warehouse keepers.

Procurement of raw materials for CFC production

I checked the financial records of procurement of CTC, AHF and PCE in each plant/company. CTC, AHF and PCE were procured from time to time according to the need of the production of CFC. The financial records were made mainly on the basis of invoices issued by suppliers of CTC, AHF and PCE and Raw Materials Receipt Sheets at least signed by one person, the procurement personnel, in Juhua (B14), Dongyang (B12), Limin (B8), Xiangsheng (A13), and Changsu-3F (A10), while in other plants/companies, like Zhejiang Chemical Institute (B11) and Meilan (A8) the sheets were signed by both procurement personnel and warehouse keepers. The Raw Materials Receipt Sheet is a general name of raw materials acceptance documents. Different plants/companies have different names for this kind of sheet. In case the invoices were not received by financial staff at the end of each month, the raw materials accepted by warehouses were temporarily debited according to the Raw Materials Receipt Sheets. When the invoices were received, the previous entries were written in red and new entries made according to the invoices. This is normal practice in China and it makes the financial records consistent with real inventory at the end of each month. If the beginning stock of raw materials at the start of each month is negative, it means the plant/company does not strictly follow the sound accounting practice in China. However, in Changsu-3F I found that the invoices often reached the company before the raw materials. The financial records were made according to invoices and the quantities recorded were the quantities receivable. No adjustments were made when the raw materials arrived and there were differences with the recorded quantities. Changsu-3F made a comprehensive adjustment at the last day of year 2001 to keep consistency between real inventory and financial records.

Production of raw materials for CFC production

Except Zhejiang Chemical Institute (B11), Limin (B8) and Xiangsheng (A13), all plants/companies produced raw materials (CTC or AHF or both) for CFC production in 2001 in addition to their procurement of raw materials. I checked the financial records production of CTC and AHF, which based on Product Receipt Sheets or Production and Raw Materials Consumption Calculation Sheets or Production Sheets. These sheets were signed by statisticians from CTC/AHF production facilities and warehouse keepers in Juhua (B14) and Meilan (A8) while in Dongyang (B12) and Changsu-3F these sheets were signed by heads of CTC/AHF production facilities and statisticians.

Consumption of raw materials

I checked the financial records for consumption of CTC, AHF and PCE, mainly for CFC production. Usually the consumption of CTC, AHF and PCE was totalled at the end of each month. CFC production facilities finalized the data of CTC, AHF and PCE consumption at the last day of each production month (25th of each month) according to their

² Raw materials also includes CFC 12 for CFC 13, CFC 113 for CFC 114 & CFC 115.

production logs. Monthly Production and Raw Materials Consumption Sheets (in Juhua (B14), Dongyang (B12) and Changsu-3F (A10)) and Raw Materials Delivered Sheets (in Limin (B8), Zhejiang Chemical Institute (B11), Xiangsheng (A13) and Meilan (A8)) were prepared by CFC production facilities and submitted to accounting offices. The monthly financial records were made on the basis of these sheets bearing the signatures of warehouse keepers (in Limin (B8), Zhejiang Chemical Institute (B11), Xiangsheng (A13)), or statisticians of CFC production facilities (in Juhua (B14), Zhejiang Chemical Institute (B11) and Changsu-3F (A10)) or heads of CFC production facilities (in Dongyang (B12), Zhejiang Chemical Institute (B11), Xiangsheng (A13), Meilan (A8) and Changsu-3F (A10)).

Besides Juhua (B14) all raw materials received by CFC production facilities equalled the consumption of raw materials. In Juhua (B14) CFC production facilities received the raw materials for CFC production from warehouse and consumed part of them. Therefore, at the end of each month the CFC production facility had unused raw materials which were also included in the company stocks.

Changsu-3F has two AHF production facilities. Unlike our last verification, the mission was informed that both AHF production facilities involved in CFC production in 2001. Therefore, I checked the production data of both AHF production facilities and consumption data of all AHF in Changsu-3F.

Sales of CFC

I checked the financial records of CFC sales. As the time left for me in each plant was not enough to check the detailed evidences of sales and taking into account the less importance of sales in the verification of CFC production, I only noted down the data of CFC sales. Another reason for simple verification of CFC sales is that there was no error found during the last verification in 2001. For the purpose of reducing the risk in this aspect, I checked the inventory records confirmed by relevant personnel. At the last month of year 2001, SEPA encouraged the plants/companies to send inspectors to other plants/companies. The inspectors obtained training from SEPA and made physical inventory of CFC products and raw materials at the last day of year 2001. Therefore, I checked the inventory documents signed by the inspectors and found they were consistent with the financial records of the plants/companies.

* * * * *

After the financial verification in each plant/company I prepared spreadsheets with corrections to the tables submitted by plants/companies before the mission departure.

As this financial verification was made on the basis of two assumptions mentioned above, I recommend again that financial audit should include examinations of the plants/companies Balance Sheet and Income Statement because with the audited Balance Sheet and Income Statement, the verification mission for next year can understand the whole picture of the plants/companies they visit and satisfy themselves that the plants/companies provided the complete information covering CFC production. For example, from the note of sales income, the verification mission could understand the composition of sales income of the plants/companies and sales of CFC product. From the note of inventory, the verification mission could understand the inventory of CFC product.

**MESSAGE: Endorsement of Use of HCFC as a Transitional
Substance by the Five I&C Enterprises**

Dear Erik,

Regarding Industrial and Commercial refrigeration projects, which had been submitted to the MLF secretariat, SEPA endorses related issues as follows:

1. SEPA has reviewed the proposal for the conversion to HCFC for the compressor production at the five I&C refrigeration companies:

- Dalian #2 Refrigeration Machinery Factory
- Zhejiang Bcifeng Refrigeration Machinery Company Co. Ltd.
- Zhejiang Chulian Refrigeration Machinery Co. Ltd.
- Zhejiang Yuhuan Refrigeration Machinery Co. Ltd.
- Shanghai Minhang Refrigeration Factory

and has agreed that HCFC can be used as a transitional substance by the five companies. This agreement also takes into account the strategy for the industrial and commercial refrigeration sector, where the second conversion would be facilitated through the technical upgrade of the compressor production facilities at the companies.

2. SEPA also agrees that no further funding will be requested on behalf of the companies for the conversion to a none ODS substance in the future if the forthcoming project including above mentioned five enterprises were approved by the ExCom.

If you experienced any problem in receiving this transmission, please inform the sender at the telephone or fax number listed above.

Regrads,

Xiong Kang

Annex III

**ANNUAL PROGRESS REPORT ON THE IMPLEMENTATION OF
SOLVENT SECTOR PLAN FOR ODS PHASEOUT IN CHINA
FOR THE PERIOD APRIL 2000 – DECEMBER 2001
AND
REQUEST FOR RELEASE OF FUND FOR THE IMPLEMENTATION OF
THE 2002 ANNUAL IMPLEMENTATION PROGRAMME**

submitted by
State Environmental Protection Administration (SEPA), China
and
United Nations Development Programme (UNDP)

A. BACKGROUND

At its 30th Meeting held in Montreal 29-31 March 2000, the Executive Committee of the Multilateral Fund for the Implementation of the Montreal Protocol (ExCom), by Decision 30/56, approved the “Agreement for ODS Phase out in China’s Solvent Sector” (Agreement) on the phase out of ozone-depleting substances (ODS) in China’s solvent sector at a total cost of \$52 million to the Multilateral Fund (MLF).

The Agreement is for the phased reduction and complete phase out of the consumption of trichlorotrifluoroethane (CFC-113) and 1,1,1 trichloroethane (TCA), as well as the consumption of carbon tetrachloride (CTC) used as cleaning solvents in China.

The \$52 million would be paid out in instalments over an eleven-year period in the exact amount of US dollars as specified in the Agreement, starting in the year 2000 and ending in 2010. By the approval of the Agreement, China committed that in exchange for the funding level specified, it will eliminate its total non-exempt CFC-113 and TCA consumption, as well as its total CTC consumption for solvent use in accordance with an agreed schedule. China further agreed that total non-exempt CFC-113 and TCA consumption in China, as well as the total consumption of CTC in the solvent sector in China will not exceed the levels agreed for specific chemicals in each year up to 2010.

China will phase out its CFC-113 consumption by 1 January 2006 and its CTC consumption by 1 January 2004, save for consumption of these two ODS for feedstock and process agent uses, and for CFC-113 consumption and CTC solvent consumption that may be agreed by the Parties to be essential for China after 2010. TCA will be totally phased out by 1 January 2010, save for any TCA solvent consumption that may be agreed by the Parties to be essential for China after 2015.

The United Nations Development Programme (UNDP) has agreed to be the implementing agency for this project for the first three years at a fee of 10% of funds allocated during that

period. The fees for future years will be agreed between the Executive Committee and the implementing agency for the project.

B. PHASEOUT ACTIVITIES

Immediately after the approval of the Agreement in March 2000, the State Environmental Protection Administration of China (SEPA) and UNDP held many discussions on implementation arrangements and preparation of workplans. The project document was signed by SEPA and UNDP in June 2000. The draft Project Implementation Manual (PIM) was reviewed, finalized and agreed by SEPA and UNDP in June 2000.

In August 2000, A Domestic Implementing Agency (DIA) was selected, through international competitive bidding, to assist SEPA in undertaking the day-to-day operational activities to facilitate enterprise level phase out.

Since June 2000, SEPA, the Special Working Group for Solvent (SWG), and the DIA had conducted seminars, workshops and national conferences for solvent consuming enterprises, industrial associations and national experts to introduce and publicize the Solvent Sector Plan, to initiate action to organize the Alternative Technology Support System (ATSS), to discuss the operational mechanism, to obtain updated information on current cleaning technologies and trends in each industrial sector, and to identify and assess alternative solvents and conversion technologies for different ODS solvent consuming sub-sectors.

In July 2000, international and national experts met to further develop the sector phase out plan in defining the phase out priorities, set time schedules, identify technical options and funding level for phase out in each sub-sector. National experts gained experience through exchanges with UNDP international experts. Phase out schedules were refined and preparation for the first bidding of ODS Reduction Contracts were carried out.

1. 2000 ODS Reduction Contracts

Due to the time required to complete some of the preparatory works that are critical to the successful initiation of enterprise level phase out activities, the initiation of the first year bidding process was delayed for about two months. Bidding documents for ODS Reduction Contracts to phase out the amount of ODP required to meet the 2001 targets were sent out in September 2000 to 30 large and medium ODS solvent consuming enterprises in liquid crystal display (LCD) manufacture, compressor, electric vacuum and electronic component identified as priority subsectors for early phase out. All these enterprises have pre-registered their interest in converting to non-ODS cleaning technologies.

20 out of the 30 enterprises submitted their bids by the closing date of 6 November 2000. The DIA organized bid evaluation by a Bid Evaluation Committee comprising representatives from the SWG, technical experts and DIA. A two-stage evaluation was utilized to evaluate the documentation. 19 out of the 20 bids were qualified for the next stage of technical evaluation utilizing the following six criteria:

- priority of subsector;
- mature and advance alternative technology;
- reasonable and executable implementation plan;
- quality of documentation;
- management and financial condition of enterprise; and
- price.

The bid evaluation recommended 15 enterprises for the award of ODS Reduction Contracts that would phase out 473.169 tons of CFC-113, 15.6 tons of TCA and 7.6 tons of CTC. ODS Reduction Contracts for these 15 enterprises were signed on 27 November 2000. With the ODS to be phased out by these reduction contracts, even though the aggregate 2000 phase out targets in the 2000 – 2001 First Annual Programme would be exceeded, there was still a shortfall of 84.6 tons in the phase out of TCA that China had to meet.

Subsequent to the report to the 32nd Executive Committee Meeting in December 2000 on the results of the 2000 bidding, the Government of China undertook necessary action to make up the shortfall in TCA phase out. One more ODS Reduction Contract was signed on 21 February 2001 to phase out an additional 86 tons of TCA to meet all the phase out targets of each of the three solvents stipulated in the 2000 – 2001 First Annual Programme.

The 16 ODS Reduction Contracts signed would therefore phase out 473.169 tons of CFC-113, 101.6 tons of TCA and 7.6 tons of CTC. Total bid price for the 16 winning bids is RMB 58,799,444, counterpart funding by the enterprises amounted to RMB 24,641,414, total phase out cost for the ODS Reduction Contracts awarded is RMB 34,158,030, equivalent to US\$ 4,132,353.

The implementation of the 2000 ODS Reduction Contracts is well underway. In April 2001, international competitive bidding for the equipment required for the 2000 ODS Reduction Contracts was advertised in newspapers in China and international website. By the closing date of 13 June 2001, 15 domestic equipment manufacturers purchased the bidding document, 12 of them submitted bids. A Bid Evaluation Committee of five, consisting of three technical experts, one representative from the DIA and one representative from the procurement agency, carried out the bid evaluation. A Bid Evaluation Report and the recommendation of award were submitted to the Contracts Committee of the Foreign Economic Cooperation Office (FECO) of SEPA for review and approval. Contracts for the procurement of equipment were subsequently awarded to two lowest bidders.

2. 2001 ODS Reduction Contracts

According to the 2000 – 2001 First Annual Programme, the phase out of 655 tons of CFC-113 and 100 tons of TCA were to be achieved with the 2001 ODS Reduction Contracts and Voucher System.

Preparation for the 2001 bidding was initiated in February 2001. DIA issued bidding documents on 2 April 2001 to 23 enterprises in the LCD, compressor, electronic vacuum, electronic

components and mechanical processing subsectors. 21 of the 23 enterprises submitted their bid by the closing date of 12 June 2001. Bid evaluation was carried out by a Bid Evaluation Committee utilizing the same evaluation criteria as applied to the 2000 bidding. The Bid Evaluation Committee recommended the award of contract to 19 successful bidding enterprises to phase out 676.978 tons of CFC-113, 27.973 tons of TCA. The Bid Evaluation Report was reviewed and approved by the Contracts Committee of FECO. ODS Reduction Contracts with the 19 winning enterprises were signed on 5 July, 2001

The phase out amount of TCA again fell short of the required phase out target by 72.027 tons. The Contracts Committee of FECO requested the DIA to secure additional contract(s) by 31 October 2001, to phase out at least 72.1 tons of TCA.

SWG and DIA therefore investigated nearly 20 TCA consuming enterprises and identified 5 enterprises with higher consumption as potential candidates for phase out. Technical discussions were carried out with these enterprises. DIA and national experts then carried out site visits and completed negotiations and finalized the technical schemes with two enterprises to phase out an additional 78 tons of TCA. ODS Reduction Contracts were signed with these two enterprises in September 2001.

The 21 ODS Reduction Contracts signed in 2001 would therefore phase out 676.978 tons of CFC-113, 105.973 tons of TCA. Total bid price for the 21 winning bids was RMB 56,050,140, counterpart funding by the enterprises amounted to RMB 20,003,300, total phase out cost for the 21 ODS Reduction Contracts awarded is RMB 36,046,840, equivalent to US\$ 4,360,857.

With the guidance of national experts, the 21 winning enterprises are currently preparing the technical specifications for the equipment required.

As a result of the 2000 and 2001 biddings, the status of ODS Reduction Contracts can be summarized as follows:

	CFC-113 (ODS tons)		TCA (ODS tons)		CTC (ODS tons)		No. of Enterprises		Funding (US\$)	
	Planned	Executed	Planned	Executed	Planned	Executed	Planned	Executed	Planned	Executed
2000 Bidding	466	473	100	101	0	7.6	10-20	16	\$5 million	\$4.132 million
2001 Bidding	655	677	100	105.9	0	0	10-20	21	\$5.5 million	\$4.361 million

3. Bilateral Project Preparation Activities

Project preparation funds were approved at the 29th Executive Committee Meeting for Japanese and French bilateral investment projects to reduce ODS solvent consumption. These investment projects would be the total involvement of bilaterals in the China Solvent Sector Plan covered by the Agreement

UNDP was designated by the Government of Japan as the implementing agency of the bilateral project preparation. A project preparation mission was carried out in July 2000, with the participation of Japanese experts and UNDP sector expert. Based on the mission and inputs provided by the experts, a project proposal for the elimination of CFC-113 used in six enterprises was finalized. The six enterprises manufacture liquid crystal display (LCD) in Guangdong province, China. The project proposal reflected the alternative technologies recommended and discussed between the experts and the six enterprises.

The overall cost effectiveness of the Japanese bilateral investment project proposal, calculated on eligible consumption for each enterprise, was \$19.60/kg ODP. As China agrees that the overall cost-effectiveness of the Agreement of US\$12.90/kg will be equal to, or better than, the cost-effectiveness without any bilateral involvement, China did not feel that it can maintain the overall cost-effectiveness with the implementation of the bilateral project proposal at the cost-effectiveness reflected in the project proposal, as it may not be able to make up the difference with low cost-effectiveness projects. China therefore decided that it could not accept the submission of the bilateral investment project proposal to the Executive Committee for consideration.

The French bilateral investment project is still under consideration. The submission of this bilateral project proposal must be endorsed by SEPA. France is requested to coordinate its submission of the investment project with SEPA and UNDP.

4. Relevant Policies

Paragraph j of the Agreement stipulated that 12 months after approval of the Agreement China shall ban the export of ozone-depleting substances used as cleaning solvents (CFC-113, TCA and CTC). SWG started to report or apply to the State Management Office of Import and Export of ODS (hereinafter referred as to the Office) for formulating relative policies through FECO/SEPA.

The Office is a managing office jointly established by the National Customs Administration, the Ministry of Foreign Trade and Economic Cooperation (MOFTEC) and SEPA. The Office is dedicated to make, promulgate and execute policies on controlling the import and export of ODS. Regarding the regulations of the Agreement and relative requirements of execution of the Solvent Sector Plan, the Office promulgated the “Second Export Banning List of ODS” on 18 January 2001 and ordered to execute it formally effective 1 February 2001. The specific regulations relating to ODS solvent are as follows:

1. An export license management system will be used for CTC and TCA exported as raw materials or reagent. A quota license management system will be used for the import of TCA as cleaning solvent. The export of CTC and TCA as cleaning solvent and the import or export of CFC-113 as cleaning solvent is banned.
2. The enterprise who needs to import or export TCA and export CTC as raw material or reagent shall make application to the Office as per regulation and procedures specified in “The Notice of Issuing About Strengthening the

Regulations on Importing or Exporting ODS” and shall obtain approval by the Office and get the import or export license issued by authorities authorized by the MOFTEC. Then the customs house can release the import or export against such license.

C. TECHNICAL ASSISTANCE ACTIVITIES

1. Training Activities

Training activities were conducted in August 2000 and April 2001 for 120 and 100 participants from the candidate enterprises for the 2000 and 2001 bidding respectively. Training programme includes:

- Introduction of Solvent Sector Plan and its execution modality;
- Preparation of bid proposal and how the bidding will be executed;
- Introduction by technical experts on alternative technologies;
- Exchange and discussion between technical experts and enterprises.

Training during pre-bid meeting conducted for 60 participants to provide the participants with:

- Introduction of basic requirements of the bid proposal and related forms;
- Technical specification requirements and related forms;
- Clarifications on technical aspects and on alternative technologies.

2. Public Awareness & Promotion

Mass media promotions were carried out during a National Solvent Working Conference held in August 2000. Periodic articles are published in the electronic sector’s regular publications and in countrywide newspapers and magazines. Public awareness campaign on the Solvent Sector Plan has also been launched.

3. Strengthening of Alternative Technology Support System (ATSS)

The special characteristic of the China Solvent Sector Plan is the sheer number of enterprises and the wide usage of ODS in different subsectors and regions. To better resolve the alternative technology issues, to provide enough alternative technology options and support for ODS consumers to meet their production demand during the process of ODS solvent phase out, an Alternative Technology Support System (ATSS) has been established to serve all users, with primary focus to service the small-scale users and to provide technical support to the SWG and DIA.

ATSS is composed of such members as national expert group, relevant industrial associations, three technical support centers, alternative solvent or equipment dealers or manufacturers. A total of 10 national experts have joined the national expert group. Exchange with and technical training by international experts were carried out. The national expert group provided training to

enterprises on alternative technologies and carried out technical exchanges and discussions. With the assistance of the industrial associations, SWG and national expert group carried out on-the-spot investigation on enterprises producing LCD, compressor and electric vacuum and provided the enterprises with information on alternative technologies and other support services. They also assisted the enterprises in determining the technical scheme and preparing technical specifications. In addition to sector experts, technical experts from alternative equipment manufacturers were also included in the national expert group.

As members of the ATSS, industrial associations mobilize the relevant enterprises to participate in the ODS phase out activities, popularize the Solvent Sector Plan and coordinate activities during implementation of the phase out projects.

In addition, the three Alternative Technology Support Centers took an active role in various phase out activities, providing candidate enterprises with consulting, testing and measuring services.

4. Solvent Sector Management Information System (SSMIS)

With the approval of several sector plans for China, it is now necessary to redesign and further develop the ODS Management Information System (MIS) by FECO. The SSMIS would be readjusted and developed so as to meet the overall MIS requirements of FECO as an integrated system for the ODS MIS, so that it will present an integrated and coordinated database for the management and monitoring of all the sector plans.

Project contractor has been selected through competitive bidding process and the Terms of Reference for the SSMIS has now been finalized. Activities and development work have been initiated in August 2001.

5. Development and Investment of Alternative Solvents Production

During preparation for the implementation of the Solvent Sector Plan, China realizes that the most important challenge for a successful and smooth phase out in the solvent sector is the sufficient availability of good quality alternatives at reasonable low price. At present, China imports most of the alternative solvents at a very high price which is a major obstacle to getting the interest of enterprises to participate in phase out activities. Some local enterprises have embarked on the development and production of alternative solvents and equipment. SEPA strongly believes that one important activity in the successful implementation of the Solvent Sector Plan is to assist these local enterprises in the development of these alternative solvents that are identified to be of good potential substitutes and to provide investment in building up their production capacity in order to provide sufficient local supply to current ODS solvent consumers.

Two locally developed alternative solvents, HEP-2 (containing nPB) and HT-1 have been evaluated by Chinese industries and found to be economically and technically acceptable alternative solvents. Testing and pilot production in some sub-sectors have proven to be effective and their use being accepted by those enterprises.

To meet the requirement of the development and production of alternative solvents, a total of \$2 million was reduced from the ODS Reduction Contracts and Voucher System in 2000 and 2001, as a result of savings achieved through the bidding process, to be reallocated to the development and production of alternative solvents. SEPA has revised the 2000 – 2001 Annual Programme to include this support. The amended 2000 – 2001 First Annual Programme was submitted to and reviewed at the 33rd ExCom Meeting.

While \$2 million will be deployed from the ODS Reduction Contracts and Voucher Systems of CFC-113 and TCA in 2000 and 2001 to provide for the development cost and investment capital for alternative solvents, even with the \$2 million reduction, China was able to sign sufficient ODS Reduction Contracts to phase out the level of consumption required to meet the 2001 and 2002 control targets, as stipulated in the Agreement. This was achieved through the bidding system which resulted in a lower phase out cost per ODP tonne, therefore the reduced allocation was still sufficient to cover the cost of the 2000 and 2001 ODS Reduction Contracts.

Up to the end of December 2001, while no activity has yet been initiated or expenditure incurred in the development and production of HEP-2 that contains nPB, China has actively carried out alternative technology studies in the following sectors:

- Experiments and study on alternative LCD cleaning solvent;
- Experiments and study on electric vacuum sector;
- Strategy on alternative technologies development.

D. FUNDING

In approving the Agreement at its 30th Executive Committee Meeting, the ExCom approved the release of the 2000 funding level of \$6.75 million in March 2000 to facilitate China's initiation of activities to meet the 2001 reduction target levels as well as work towards achieving future years' reduction targets. The ExCom also release the 2001 funding in the amount of \$6.955 million in March 2001 to initiate activities for the year 2001.

E. SUBMISSION OF REPORTS

At the 32nd ExCom Meeting, China and UNDP presented the “Interim Report and Request for Second Payment on the Implementation of the 2000 – 2001 Annual Programme Under the China Solvent Sector Plan” (UNEP/OzL.Pro/ExCom/32/30/China). An Addendum to the Interim Report was also submitted shortly prior to the 32nd ExCom Meeting. After considering the recommendations of the Sub-Committee on Project Review (UNEP/OzL.Pro/ExCom/32/21, para. 96), the Executive Committee “took note of the interim report on the 2000 – 2001 Annual Programme under the China Solvent Sector Plan indicated that the projected phase out would not meet one of the phase out targets stipulated in the Agreement.” (UNEP/OzL.Pro/ExCom/32/44, para. 79)

At the 33rd ExCom Meeting, China and UNDP submitted the “Report and Request for Second Payment on the Implementation of the 2000 – 2001 Annual Programme under the China Solvent Sector Plan.” After consideration of the report, the ExCom approved the release of the 2001 funding in the amount of \$6.955 million for the 2001 phase out activities.

The 2002 Annual Implementation Programme was submitted to the 35th Executive Committee for review and approval of the Executive Committee. The 2002 Annual Implementation Programme in the amount of \$6,330,000, covering the period of January – December 2002, includes enterprise-level phase out activities, policy actions and technical assistance activities to phase out 625 MT of CFC-113, 250 MT of TCA and 50 MT of CTC (500 ODP tonnes of CFC-113, 25 ODP tonnes of TCA and 55 ODP tonnes of CTC) with ODS phase out results being achieved by the end of 2003, to enable China to meet its 2004 phase out targets. The Executive Committee, having considered the recommendation of the Sub-Committee on Project Review, decided at its 35th Executive Committee Meeting to approve the 2002 Annual Implementation Programme of the solvent sector in China, as the basis for considering funding of the programme at a future meeting (ExCom Decision 35/51).

F. 2000 CONTROL TARGETS OF SOLVENTS CONSUMPTION

The Solvent Sector Plan for ODS Phase out in China was approved at the 30th Executive Committee Meeting in March 2000. As phase out projects at the enterprise level will take at least 12 – 18 months to complete implementation, any project activities initiated under the China Solvent Sector Plan in 2000 will not result in any consumption phase out at the end of 2000. The annual performance verification as required in the Agreement will be conducted only starting with the production and consumption level of 2001, to be carried out after the first quarter of 2002, when official data and records of production and consumption become available for the preceding year.

Based on official data and statistics on China chemical production, import and export obtained by SEPA, the total domestic consumption of CFC-113 and TCA has met the relevant targets specified in the Agreement signed between MLF and China. While the annual usage of CTC in China is around 60,000 to 70,000 MT, 100 MT was used as cleaning solvents. The balance was used as feedstock. The following table indicated that China did not exceed the 2000 consumption levels for specific chemicals.

	CFC-113		TCA		CTC	
	ODS	ODP	ODS	ODP	ODS	ODP
Consumption Target	4,125	3,300	6,212	621	100	110
Production	4,371		809			
Import	19		6,796			
Export	88		29			
Raw Material Usage	245		1,863			
Solvent Consumption	4,057	3,246	5,713	571	100	110

G. ACHIEVEMENT OF PERFORMANCE INDICATORS

As reflected in Appendix 1 to this Report, in implementing the ODS Reductions Contracts and technical assistance activities, China has been able to achieve the performance indicators stipulated in Table 5 of the Amended 2000 – 2001 First Implementation Programme.

H. ACTION CURRENTLY UNDERWAY

1. Voucher System

The SWG is currently reviewing the regulations on the execution of the Voucher System and thinks that it still need further study and development on the relative appendix tables and forms, the basic design of the voucher, as well as the contents of information packages to be provided to the small OD solvent consumers.

The DIA is currently completing the review and approval of the final version of the regulations. It is planned that the Voucher System will be introduced in the first quarter of 2002, to a small group of small users and then to proceed with the promotion and registration.

3. Audit

Under the Agreement, two audits are to be carried out, one financial audit and one performance audit, starting with the phase out that would be achieved at the end of 2001. UNDP will include the Solvent Sector Plan project in its annual audit exercise, which will be conducted in the first quarter of 2002, on management and financial matters. Special emphasis will be placed on the management and financial issues of phase out activities at the enterprise level, and on technical assistance and other administrative matters at UNDP, DIA, SWG and FECO.

UNDP is currently under discussion with SEPA and the National Audit Board to carry out a performance audit starting after the first quarter of 2002, on the performance of the ODS

Reduction Contracts, the verification of national level of solvent consumption, in coordination with the audit on the production level (of CFC-113, TCA and CTC) under the China CFC Production Plan , when official data and records on ODS production and consumption in China will become available.

Verification of import and export of OD solvents will also be verified during the performance audit so as to arrive at a credible national solvents consumption level, in order to verify that the 2001 phase out targets stipulated in the Agreement have been achieved. The performance verification report for 2001, will be submitted to the last Executive Committee Meeting of 2002.

I. REQUEST FOR THE RELEASE OF 2002 FUNDING

At its 35th Executive Committee Meeting, the Executive Committee, by Decision 35/51, decided to approve the 2002 Annual Implementation Programme of the solvent sector in China, as the basis for considering funding of the programme at a future meeting. In accordance with the terms of the Agreement, China and UNDP request the Executive Committee to release the 2002 funding in the amount of \$6,330,000, and the 10% fee to enable China and UNDP to initiate the 2002 phase out activities, as contained in the approved 2002 Annual Implementation Programme.

Appendix 1
Implementation Programme (2000 - 2001)
Performance Indicators

Solvent Phase out Targets					
Solvent Sub-sector	Start of programme (MT)	Reduction Target (MT)	End of programme (MT)	Indicators to be reported on in Semi-Annual Progress Reports. Verified in Annual Performance Audits	Achievement
CFC-113 Imports / Exports	149	0	0	Ban on exports and imports effective January 1, 2001	Promulgated 18 January 2001, effective 1 February 2001
Domestic Consumption and Phase out Target	4,441	466 (plus 600 from on-going MLF projects)	3,375 (in 2001) 2750 (in 2002)	Consumption levels (production plus imports minus exports)	No impact on 2000 Consumption and Phase out Targets ODS Reduction Contracts signed to meet 2001 and 2002 Phase Out Targets
TCA Supplement	-	>100	-	Included in ODS reduction contracts	
Number of ODS Reduction Contracts (inclusive of TCA supplement)		L/M 20-40 S 100 (2001)		Number of contract signed (sum of ODS reduction in the contracts) Progress under contracts	16 ODS Reduction Contracts signed in 2000 to phase out 473 MT of CFC-113, 101 MT of TCA and 7.6 MT of CTC;
Voucher Redeem				Number of voucher redeemed	21 ODS Reduction Contracts signed in 2001 to phase out 677 MT of CFC-113, 105.9 Mt of TCA
Policy and TA Initiatives					
Initiatives	Indicators to be reported on in semi-annual progress reports			Achievements	
1. Bidding System	Bidding system's operating procedures finalized. Winning enterprises for 2000 –2001 selected. Enterprises trained for bid preparation for 2000 and 2001 bidding.			Project Implementation Manual finalized June 2000 and bidding took place in September 2000 and April 2001. 16 and 21 enterprises selected to participate in 2000 and 2001 phase out activities respectively. Training took place prior to each year's bidding.	
2. Public Awareness	Introduce Solvent Sector Plan and phase out schedule on two newspapers Invite ODS solvent users to take part in the reduction bidding and promote the enterprises to participate the phase out actions			Mass media promotions carried out in August 2000. Periodic articles published in electronic sector's regular publications and countrywide newspapers and magazines. 30 and 23 enterprises were invited to participate in the 2000 and 2001 bidding.	
3. Training	Provide personal training courses to ODS users, EPBs and local line ministries			Trainings and seminars on ODS phase out conducted during 2000 and 2001.	
4. Notice on banning newly-built enterprise which produces or uses ODS solvent	Promotional campaigns on the ban; Local Electronic Bureaus and EPBs engaged in overseeing ban enforcement.			Second Export Banning List of ODS promulgated on 18 January 2001 and became formally effective 1 February 2001.	
5. Developing ATSS	Contracts issued, progress reports			ATSS composed of national expert group, relevant industrial associations, three technical support centers, alternative solvent or equipment dealers or manufacturers
