## Annex I

### **DETAILED ANALYSIS OF THE STATUS OF IMPLEMENTATION IN COUNTRIES SUBJECT TO DECISIONS OF THE PARTIES ON COMPLIANCE AND THOSE AT RISK OF NON-COMPLIANCE**

1. Annex I presents the detailed analysis of the status of implementation in countries subject to decisions of the Parties on compliance and those at risk of non-compliance. The data tables in Appendixes I-V indicate whether a country has received a total phase-out agreement for a specific controlled substance. The CFC analysis (Appendix I) shows further whether a low-volume consuming country (LVC) has received a Refrigerant Management Plan (RMP) or a RMP update since the 31<sup>st</sup> Meeting of the Executive Committee, which should be sufficient to ensure a country's compliance at least up to, and including, the 85 per cent reduction target in 2007 (decision 31/48(h)). The analysis of halons (Appendix II) indicates whether a halon banking activity has been approved. Halon banking guidelines require that regulations facilitating production and import bans are established within six months of the establishment of a reclamation centre (decision 18/22). Decision 35/57 presumes that halon banking should be the last project approved for the halon sector. The methyl bromide analysis (Appendix III) indicates further whether a country has received funding for a phase-out to meet the 2005 control measure.

#### **ANALYSIS OF COMPLIANCE FOR CFCs (Appendix I)**

2. Based on their latest reported consumption data, 144 countries could now be considered to be in compliance, but one has not yet reported 2007 or 2008 data. The latest reported consumption for these countries, combined, is 13,574 ODP tonnes compared to 34,483 ODP tonnes in last year's report. This is 150,015 ODP tonnes lower than their combined baseline level of 163,589 ODP tonnes. Of these countries, 101 are LVCs of which 90 have received support for RMPs from the Multilateral Fund. This includes support for 74 LVCs to meet their 85 per cent reduction targets by 2007.

3. Countries have been grouped into three categories: (a) those whose latest consumption exceeds the baseline freeze; (b) those in actual non-compliance or at risk of not meeting the 2005 reduction step because their latest consumption exceeds the 50 per cent baseline reduction target; and (c) those in actual non-compliance or at risk of not meeting the 2007 reduction step because their latest consumption exceeds the 85 per cent baseline reduction target.

(a) Countries whose latest consumption exceeds the CFC baseline freeze

4. This category consists of the following one LVC: Vanuatu. All other countries appear to be in compliance. The Government of Vanuatu has already received projects for complete phase-out of CFCs with the Executive Committee.

(b) Countries at risk of not achieving the 50 per cent CFC baseline reduction

5. This category consists of two LVC countries. These countries may be in non-compliance with the control measures. These countries may need to achieve additional CFC phase-out, amounting to 10.3 ODP tonnes by 2005 in order to comply with the 50 per cent reduction target. No activity planned for these countries in the 2009 business plans.

6. Of the two countries, the Executive Committee has approved RMPs for one LVC, Vanuatu. The Government of Vanuatu has already received project funding for complete phase-out of CFCs from the Executive Committee.

7. Bosnia and Herzegovina did not have an approved RMP, but has national phase-out agreement with the Executive Committee.

(c) Countries at risk of not achieving the 85 per cent CFC baseline reduction

8. This category consists of 6 countries, including 4 LVCs, which may need to achieve additional CFC phase-out amounting to 518 ODP tonnes by 2007 in order to comply with the 85 per cent reduction target. Of these 6 countries, two were to receive projects with phase-out in the 2009 business plans.

9. Of the 6 countries, the Executive Committee has approved RMPs for one non-LVC and two LVCs, including three countries that had already received either an RMP to meet their 50 per cent and 85 per cent reductions or had a national phase-out agreement approved. Federated States of Micronesia and Vanuatu are two of the LVCs that have phase-out agreement with the Executive Committee as part of the Pacific Island Country (PIC) strategy.

10. There is one LVC that has approved national phase-out agreement: Bosnia and Herzegovina.

11. The remaining two countries that may require additional actions to achieve the 85 per cent reduction are Saudi Arabia and Somalia. With the exception of Somalia, all countries currently eligible for Fund assistance have national CFC phase-out agreements with the Executive Committee, which contain a phase-out schedule that is consistent with the targets in the Montreal Protocol. All of the countries that are at risk have received support from the Executive Committee or have projects in the 2009-2011 business plans to address their compliance needs.

## **ANALYSIS OF COMPLIANCE FOR HALONS (Appendix II)**

12. Based on their latest consumption data, 70 countries could now be considered to be in compliance. The latest combined consumption for these countries is 2,100 ODP tonnes compared to 2,207 ODP tonnes in last year's report. This is 44,351 ODP tonnes lower than their combined baseline level of 46,451 ODP tonnes.

13. Seventy-four countries have reported no consumption of halons between 1995 and 2008.

14. Fifty-nine countries have received support for halon banking activities or phase-out agreements. This includes those countries participating in regional halon banks. Halon banking is presumed to be the last funded activity in the halon consumption sector for most countries but there are some halon phase-out activities that are part of multi-sectoral phase-out agreements.

15. Countries have been grouped into the following two categories: (a) those whose latest consumption exceeds the baseline freeze; and (b) those in actual non-compliance or at risk of not meeting the 2005 control because their latest consumption exceeds the 50 per cent reduction target.

(a) Countries whose latest consumption exceeds the baseline freeze for halons

16. This category consists of one country, Vanuatu, which may require additional actions to achieve compliance with the freeze on halons. Vanuatu would need to phase out a total of 15.9 ODP tonnes to meet the freeze target.

(b) Countries at risk of not achieving the 50 per cent baseline reduction for halons

17. This category consists of two LVC countries that may need to phase-out additional halons amounting to 20.3 ODP tonnes by 2005 in order to comply with the 50 per cent reduction targets. The

latest consumption for Somalia and Vanuatu in 2007 are 13.2 ODP tonnes and 15.9 ODP tonnes, respectively.

### **ANALYSIS OF COMPLIANCE FOR METHYL BROMIDE (Appendix III)**

18. This section presents the analysis for compliance with methyl bromide control measures. It should be noted that all data reported and used in this analysis relate to controlled use only, which means that the data excludes quarantine and pre-shipment (QPS). 138 of the 139 Article 5 countries that have ratified the Copenhagen Amendment have reported complete baseline data. Of these 139 countries, 57 reported zero for both the baseline consumption and the latest consumption and one where consumption data or baseline is not available.

19. Ninety-nine Article 5 countries have received support from the Multilateral Fund for methyl bromide activities and/or projects. This includes projects that will lead to a complete phase-out of methyl bromide in 56 of these countries, partial phase-out in an additional 12, and other forms of assistance received by 31.

20. Countries have been grouped into the following two categories: (a) those whose latest consumption exceeds the baseline freeze; and (b) those that could be in non-compliance or at risk with the 2005 control because their latest consumption exceeds the 20 per cent reduction. Appendix III identifies those countries that have not ratified the Copenhagen Amendment.

(a) Countries whose latest consumption exceeds the MB baseline freeze

21. This category consists of two countries that may require additional actions to achieve compliance with the freeze target: Ecuador and Vanuatu. These countries would need to phase-out a total of 56.4 ODP tonnes to achieve compliance with the freeze. All countries at risk of not achieving the freeze have received assistance from the Multilateral Fund, except for Vanuatu.

22. Ecuador has a project for partial phase-out to achieve the 20 per cent baseline reduction.

(b) Countries at risk of not achieving the 20 per cent MB baseline reduction

23. This category consists of the following two LVC countries: Ecuador and Vanuatu. These countries may need to meet additional combined reduction amounting to 69.7 ODP tonnes by 2005 in order to comply with the 20 per cent reduction targets. Ecuador is the only country that has received support for methyl bromide activities from the Multilateral Fund. Ecuador has a project for partial phase-out to achieve the 20 per cent baseline reduction.

### **CARBON TETRACHLORIDE (CTC) (Appendix IV)**

24. This section presents the analysis of compliance with CTC control measures. All data reported and used in this analysis are those related to controlled use only, which excludes feedstock. Reported CTC consumption was not differentiated by specific end use, such as solvents and process agents.

25. Of the 144 countries with reported baseline data, 88 reported zero both for the baseline and the latest consumption.

26. The analysis addresses those countries that might be in non-compliance or at risk of not meeting the 2005 control measures because their latest consumption exceeds the 85 per cent reduction. Appendix IV notes those countries that have not ratified the London Amendment.

27. Six countries might not achieve compliance with the 85 per cent reduction by 2005. These countries would need to phase-out a total of 72 ODP tonnes to meet the 85 per cent reduction by 2005. One of these six countries has reported consumption above 10 ODP tonnes: Mexico (79.1 ODP tonnes).

28. The Multilateral Fund has provided funding for CTC phase-out agreements or projects in all of the six countries (Bolivia, Chile, Cuba, Indonesia, Mexico and Paraguay). All countries that have ratified the London Amendment and are eligible for Multilateral Fund assistance have received assistance or have activities in the business plans.

#### **METHYL CHLOROFORM (TCA) (Appendix V)**

29. This section presents the analysis for compliance with TCA control measures. Of the 144 countries that have reported baseline data, 102 reported zero both for the baseline and the latest consumption.

30. Countries have been grouped into two categories: (a) those whose latest consumption exceeds the baseline freeze; and, (b) those that could be in non-compliance or at risk of not meeting the 2005 control measures because their latest consumption exceeds the 30 per cent reduction target. Appendix V specifies those countries that have not ratified the London Amendment.

(a) Countries whose latest TCA consumption exceeds the baseline freeze

31. All countries are in compliance with the 2003 freeze target.

(b) Countries that could be in non-compliance or at risk of not achieving the 30 per cent TCA baseline reduction

32. All countries are in compliance with the 30 per cent TCA baseline reduction target.

With regards to the laboratory uses, out of the 10 laboratories identified and that received technical assistance to eliminate the use of CTC, 5 already completed the reconversion of their analytical techniques to non-ODS, 2 eliminated their analytical techniques using ODS and the last 3 are still testing their alternatives with samples acquired by the Project. Although the main solvents activities are completed we are updating the date of completion to October 2009 in order to finalize the work on laboratory uses in May and test on clients in September, on the understanding that this last one is an additional activity we could accomplish but the goal of the project has already been completed.

Highly satisfactory results were obtained with the application of the alternative substance (Agrocelhone) in terms of securing the same level of production, size and quality of the plants and flowers and effectively controlling pests such as nematodes. Second round of testing to re-confirm the results will start in Feb 09 (to follow the planting cycle) and will be completed by Jun 09. As reported before, this additional testing will not have a negative impact on compliance as the GoE is committed to controlling imports of MB as reflected in its action plan.

The general indicators are grouped into the categories of indicators covering: licensing systems and importer registration; the extent to which the NOU is operational and integrated into the country's national institutions, the country's views on compliance and the forces encouraging or hindering compliance, and the extent to which ongoing projects are delayed. The risk indicators assessed on the basis of each substance can be divided into two groups: main indicators and those that might indicate risk. The main indicators are related to whether or not the Multilateral Fund has provided assistance to address the remaining consumption of a given ODS either through CAP initiatives or approved projects addressing all of the remaining consumption. The second group consists of indicators that are related to delays, timing, and percentage of disbursement for the projects addressing remaining consumption, approval of annual tranches, consumption patterns and comparisons between imports and quotas, as well as to the cost of ODS versus their alternatives (where available). No further assessments were done for the countries that responded to the risk assessment questionnaire and that indicated that they are confident or very confident to achieve or maintain compliance. The following analysis was done only for the countries that did not respond to the risk assessment questionnaire.
